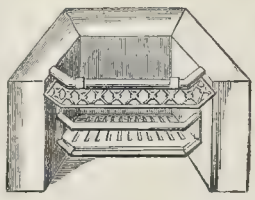
"By Royal Letters Patent."



"Indicator" Dial, 2½ in. diameter.

ELECTRIC BELLS FOR DOMESTIC USE.
BREGUET'S PATENT INDICATOR SYSTEM, the same as in use at the Grand Hotel, Boulevard des Capucines, Jockey Club, &c. Paris.
The superiority of Electric Bells is already settled in America and in France. For all modern works at Paris they have as effectually superseded the old crank and pull plan as, for travelling, the railway has superseded the antiquated stage-coach
ADAMS & SON have much pleasure in stating that they have made arrangements with Messrs. Breguet, of Paris, to become their sole Agents for the sale and fixing of their Patented Apparatus upon the "indicator system," which has great advantages over all others, and is especially adapted for hotels, public buildings, and other large establishments. The details of this ingenious instrument, together with a description of the various apparatus in use for Electric Bells, may be had upon application, or by post.
WILLIAM S. ADAMS & SON,
Ironmongers by appointment to the Queen and his Royal Highness the Prince of Wales, and also to the principal London Clubs,
Engineers and Manufacturers, 67, Haymarket, and 14, Norris-street, S.W.

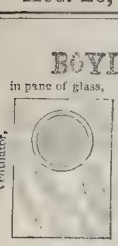
EDWARDS & SON,
STOVE, GRATE & KITCHEN RANGE MANUFACTURERS,
No. 49, GREAT MARLBOROUGH STREET, REGENT STREET, LONDON.

BROWN & GREEN'S
PATENT KITCHEN RANGES.
PRIZE MEDAL, 1862.
These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and
CURE OF SMOKY CHIMNEYS,
these Ranges are unequalled. They are of all sizes and prices; and when fitted with Bath and Steam Apparatus, &c. they form the most complete appointment for good establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,
72—74, BISHOPSGATE STREET WITHIN.
"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept. 6, 1862.

THE DENNETT ARCH.
Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by C. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.
Address to the Patentees, England and Canada,
A. & R. DENNETT & CO. NOTTINGHAM.
TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength, and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.
"GEO. GILBERT SCOTT, 20, Spring Gardens, London."

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.
MUSGRAVE'S PATENT STABLE AND HARNESS FITTINGS.



MUSGRAVE'S PATENT HARMLESS LOOSE BOXES. MUSGRAVE'S PATENT IRON COW-STALLS AND PIGGERIES.
Architects who have not seen these Fittings are requested to write for Engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition. They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under directions of London Architects, noted for adopting only what is the best of its kind. Particulars of these, as well as of MUSGRAVE'S PATENT SLOW-COMBUSTION STOVE, will be forwarded on application to
MUSGRAVE, BROTHERS, ANN STREET IRON WORKS, BELFAST.

and universally applicable.

PRICE-LIST and FULL PARTICULARS FURNISHED on Application.

in pane of glass,

FIRE-PROOF CONSTRUCTION.—FOX & BARRETT'S PATENT.
This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private. The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron, the structure possessing great strength and rigidity, and forming a fire proof foundation adapted to receive a finished surface, either of the ordinary floor-ing boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as combining the use of cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling houses and domestic buildings, within the reach of everyone.
Further information may be obtained of the Proprietor of the Patent,
MR. BARRETT,
12, YORK BUILDINGS, ADELPHI

D. HULETT & CO. 55, High Holborn, London,
Manufacturers of Gas Chandeliers Glass Lustres, &c. &c.

THE FURNISHING OF BED-ROOMS.
HEAL & SON have observed for some time that it would be advantageous to their Customers to see a much larger collection of Bed-room Furniture than is usually displayed, and although properly of the style and effect of the different articles of Furniture, it is now very much the fashion to have the Bed-room a private room. They have therefore erected large and additional Show-rooms, by which they are enabled not only to extend their Show of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete suites of Bed-room Furniture in the different styles.
Japanned Bedsteads may be seen in complete suites of five or six different colours, as also of Green Painted Bedsteads, and others of a plainer description. Suites of Stained Deal Gothic Furniture, Polished Deal, Oak, and Walnut, are also set apart in separate rooms, to which customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.
Bed Furnishings are fitted to the Bedsteads in large numbers, so that a most extensive assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.
A very large Stock of Bedding (HEAL & SON'S original trade) is always on the PREMISES.
The Stock of Mahogany Goods for the better Bed rooms, and Japanned Goods for plain and Servants' use, is very greatly increased. The entire Stock is arranged in eight rooms, six galleries (each 120 feet long), and two large ground-floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.
Every attention is paid to the manufacture of the Cabinet-work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their own immediate care.
The Bedding trade receives their constant and personal attention, every article being made on the premises
They particularly call attention to their Patent Spring Mattress, the Summer Mattress, and the Portable Mattress.
HEAL & SONS ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free by Post.—196, 197, 198, Tottenham court-road, London.

ESTABLISHED 1744.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

NEW TARIFF FOR JUNE, 1864.

THOMAS MILLINGTON'S

NEW LIST OF PLAIN AND ORNAMENTAL WINDOW-GLASS, COLOURS, &c.

See Advertisement first Saturday in the Month, or on application.

87, BISHOPSGATE STREET WITHOUT, LONDON, E.C.

NOTICE TO ARCHITECTS AND THE TRADE.

J. DEFRIES & SONS,

GAS ENGINEERS AND MANUFACTURERS OF

CRYSTAL, BRONZED, AND ORMOLU CHANDELIERS, IMPROVED CRYSTAL STAR AND SUN LIGHTS,

FOR LIGHTING AND VENTILATING PUBLIC AND PRIVATE BUILDINGS.

SPECIAL DESIGNS PREPARED in perfect ACCORDANCE WITH Architectural Arrangements.

Estimates furnished FOR THE LIGHTING and Fitting up of Theatres, Music-halls, and Public or Private Buildings with Gas, &c.

WORKS, LONDON and BIRMINGHAM.
MANUFACTORY and CITY SHOW ROOMS, 147, HOUNDSDITCH.

THE LAND SECURITIES COMPANY (Limited).
Capital, 2,000,000l.

Directors.

The Right Hon. the Lord Naas, M.P. President.

The Directors of the International Financial Society (Limited), acting as a Finance Committee.

John Dudgeon, esq. M.P. — Henry Farquhar, esq.
Sir James Ferguson, Bart. M.P. — Sir John Gray.
Col. Frank Scudamore Greville, M.P. — Chandos Wren Hoskyns, esq.
Sir John Charles Dalrymple Hay, Bart. M.P. — John Horatio Lloyd, esq.
Sir James Peter Pulling, Bart. M.P. — Hon. William Napier.
Sir Thomas Phinn, Bart. M.P. — Hon. Henry Petre.
William Dargan, esq. — Sir Charles Rich, Bart.
Granville Richard Ryder, esq.
Philip Twells, esq.

Offices—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, Office of International Financial Society, No. 60, Threadneedle-street, E.C.

The Company will make advances, repayable with interest, at fixed terms, on freehold estates, or by terminable annuities, upon the security of first class house property, and real property of all descriptions, and terminable interests in all of the estates and interests therein.

The Company will purchase, and improve and sell estates, and manage property of all descriptions, and generally undertake the authority of any Act of Parliament, Charter, Commissions of Sewers, Drainage, or other powers, and generally undertake the powers or occupation of land.

The Company will purchase and sell securities of all descriptions upon or affecting freehold, copyhold, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private.

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32, Charing-cross, London, S.W.

MATHEMATICAL DRAWING INSTRUMENTS, THEODOLITES, LEVELS, CIRCUMFERENTERS, SCALES, TAPES, CHAINS, T SQUARES, RULES, &c.

JOHN ARCHBUTT & SONS,
20, WESTMINSTER BRIDGE ROAD, LAMBETH,
Near Astley's Theatre.

Respectfully inform the public that their Illustrated Price List will be forwarded free on application. The prices will be found nearly one-third low. Every article warranted. Second-hand Instruments of all kinds, by the best makers, always in stock.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.

IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern book, designed by M. Digby Wyatt, esq. together with a specification and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthall Works, Broseley, Salop.

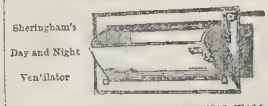
May be seen at the Exhibition of Building Inventions, &c now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.

London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Macclesfield-street North, City-road Basin, N. Firstly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and Srdly, that the "Reports of the Jurors," page 281, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Terrace," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION
MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.

Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.



Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 33 and 34, Upper Belgrave-place, Pimlico, S.W.

NO SHUTTER BARS.

JENNINGS'S SHOP-SHUTTER SHOE.
SHOP SHUTTERS are SHOD and SECURED by the above, at HALF THE COST OF THE UNSIGHTLY AND DESTRUCTIVE SHUTTER BAR. Shops referred to in every public street in London. When ordering, specify the neatest FINISHED THICKNESS of Shutters, and the way they go up.
Sold by all Ironmongers, and the Inventor,
GEORGE JENNINGS,
Engineering Depot, Palace Wharf, Stangate, Lambeth, S.

VENTILATION—PURE AIR.

THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed in the evening, at which time a constant supply of fresh air is at its most required.—HAYWARD, BROTHERS, and Manufacturers, 187 and 189 (late 117 and 118), Union-street, Borough, London.

KAMPTULICON FLOOR CLOTH.
IMPERVIOUS, COMFORTABLE, ECONOMICAL, and ORNAMENTAL, for CHURCHES, PUBLIC BUILDINGS, BILLIARD-ROOMS, and PRIVATE HOUSES.
GOUGH & BOYCE,
76, CANNON STREET WEST, E.C.

The Builder.

VOL. XXII.—No. 1124.

Ipswich Congress of the British Archæological Association.

ALTOGETHER satisfactory must, we think, be the verdict;—not merely socially agreeable, but likely to be practically useful. The visitors from London were glad to see under good guidance the antiquities of Ipswich and the various other towns to which excursions were arranged, and the inhabitants of these towns were equally glad to have the opinions of their visitors respecting them. The papers read were all *àpropos*, and when printed will be found valuable materials for future county historians. Without attempting a complete account of the proceedings, we will note some of the more salient points. The Mayor of Ipswich (Mr. G. C. E. Bacon) and the Corporation met the members in the Town-hall on Monday (the 8th), and welcomed them. The Mayor regretted that they had not come some years earlier, to have preserved from destruction many of the ancient monuments of Ipswich, of which, he said, few now remained.

Lord Houghton, the president of the meeting last year at Leeds, being unable to attend, Mr. Pettigrew, F.R.S., as the oldest vice-president of the Association, introduced to the meeting Mr. George Tomline, M.P., as their president, and spoke of the work such associations had accomplished in diffusing a taste for archæological researches, and in preserving the monuments of past times, which throw much light on obscure parts of the history of the kingdom.

The President said he received with thanks the very hearty welcome which they had given the Association upon this, its first meeting in Suffolk, or, to use an archæological term, East Anglia, among the descendants of the Iceni. He observed with pleasure that gentlemen well versed in the details of the antiquities of the town and neighbourhood were prepared to discuss them at the meetings during the week. They had had amongst them the Roman, the Saxon, and the Dane, who had left behind them foot-prints, some clear enough, some obscure, and which had been traced with ability and success—sometimes, perhaps, upsetting legends and traditions that had been gradually manipulated into history. Pointing out the success of archæological pursuits, both at home and abroad, he said speculations were often wrong, but speculation was the mother of discovery; and the more wide, the more active, the more keen the interest men took in science, the more certain were they gradually to arrive at what might gratify their own ambition and add to their own knowledge of mankind. A day spent in the ruins at Bury St. Edmund's or Framlingham, would form a better lesson to the student of history than a much longer time spent in libraries, in reading the records written of them. We could not expect to surpass the intellectual strength of the time of Plato or of Galileo, but we had the advantage in intellectual freedom. The scientific progress that had been made, and the discoveries upon which they might congratulate themselves, and which had conferred as much happiness upon mankind as they had given knowledge to it, they owed in a great measure to the boldness and energy of the age in which they lived—to the increasing liberty demanded and the increasing honour paid to the courage and independence of the mind of man. The President quoted from memory a long passage from Borrow's "Spain," with reference to the universality of the so-called Druidical monuments, and dilated admirably on the truths likely to be derived from the study of them.

Mr. Cobbold, M.P., moved, and Mr. Godwin seconded, the thanks of the meeting to the president for his able and eloquent address. The motion was carried by acclamation, and the meeting having been brought to a close, the company proceeded, under the guidance of Mr. Phipson, one of the local secretaries, to examine some of the antiquities of Ipswich, including the town library, the well-known residence called "Sparrowe's House," the churches, and the museum. The oldest part of Sparrowe's House is a small chamber of the period of Henry VII. or early in Henry VIII.'s reign; which had been for a long period closed and concealed, and was not discovered till 1801. It is formed in the original roof of the house, a floor being put in at the level of the hammer-beam. When it was broken open a number of figures of angels were found distributed about the floor. The elaborate front of the house was built in 1567, by George Copping, and the house came into the hands of the Sparrowe family seven years later. The party then inspected Wolsey's Gate, dated 1528, and the only remaining portion of the great college which Cardinal Wolsey took so much pride in establishing. The next place visited was Key Church, whose roof of double hammer-beams is noticeable, and where the fine Powndor brass and the tomb of the charitable Tooley came in for examination and explanation. In this church Mr. Godwin took the opportunity of remarking that the roof wanted care on the part of the churchwardens to prevent its falling into decay, and he also observed that Wolsey's Gate required attention. If pointed and maintained under intelligent direction, the necessity for "restoration" would be avoided. A promise was given that the attention of the churchwardens should be called to the roof; and Mr. E. R. Turner, as owner of the property on which Wolsey's Gate stands, expressed his willingness to fall in with the wishes that had been expressed as to the maintenance of Wolsey's Gate in its present condition.

The party then took their course by Quay-street to St. Clement's, Fore-street, where they inspected the Neptune and other carved houses in this thoroughfare, which Mr. Phipson said must have been the High-street of the town in the days of the merchant princes of Queen Elizabeth's reign.

Amongst other places visited must be specially mentioned Christ Church, the residence of Mr. Fonnereau, which took many by surprise. The house is of red brick. There was originally a priory here. The rear of the house carries us back to the time of Edward VI., but the front brings us down as late as James. The entrance-hall, hung with paintings, with a chandelier formed of antlers in the centre, is the finest feature of the interior. A conspicuous object is the large chimney-piece, decorated with sculpture, prominent amongst which is the marble bust of a female, with a *veiled face*, brought from Rome 200 years ago, it was stated. A variety of antiquities was displayed for inspection. The billiard-room contains a finely-executed piece of tapestry, and a large clever cartoon, by a local artist, Mr. E. Smith, of the death of Sir P. Sidney, exhibited in the Westminster Hall competition, which led a number of artists to show their ability in a new line, and who were then allowed to fall back again into their former ways without hope of emergence. The adjoining church, St. Margaret's, has a remarkably handsome clerestory and parapet externally. A broad open staircase gives access to the first floor. A bed upon which Queen Elizabeth slept, when halting in Ipswich on some provincial tour, was a conspicuous object.*

At the evening meeting, the mayor presiding, Mr. Planché read a paper "On the Earls of East Anglia," in which he continued the subject of a former paper, read by him at the congress of the Association at Norwich. The principal object was to point out and endeavour to unravel the perplexities in which the genealogy of the earls of East Anglia is involved, and to expose some of the errors and contradictions that have been repeated again and again by historians. Mr. Planché having adverted to the origin of the family of Bigot, or Bygod, as it is indifferently written, proceeded to examine the contradictory evidence of the genealogy of the family contained in various charters, court rolls, fine rolls, &c., compared with the statement of former genealogists; and the extreme difficulty, if not impossibility, of reconciling the different authorities was thus humorously indicated at the conclusion of the paper:—

"We have to exculpate the venerable Earl Hugh, the first, from the charge of having left three widows to deplore his loss, and account for his having died originally about 1136, and subsequently in 1177. We have to identify two Margarets, each the daughter of a Robert de Sutton, or accuse William Bigot of breaking the law which declares that a man shall not marry his grandmother. We have to decide whether the first Earl Roger was twice married, or whether the earls who succeeded him were the issue of Isabella de Warren, the wife he does *not* mention, or of Ida, the wife he acknowledges; and if the latter—who was she? And, lastly, we have to discover the Hugh de Bigot, Earl of Norfolk and Suffolk, who had the charge of the sea coast of those counties in 1258, apparently during the lifetime of the second Earl Roger, who succeeded in 1225, and did not die before 1269, unless he was guilty of the same duplicity as his great grandfather, and died twice on purpose to puzzle us."

It is high time that something like a critical examination should take place of these Anglo-Norman pedigrees, which have been complacently copied for centuries without hesitation. By their correction and illustration a flood of light would be poured upon the early annals of England as well as on family history.

Mr. Edward Levien, M.A., then read a paper on the MS. collections relating to Suffolk in the British Museum. Mr. Levien cited examples to show the materials which these collections contain for elucidating local history; and incidentally mentioned that there were documents setting forth law points of great interest to this immediate neighbourhood. The most curious book of all was the Domesday Book of Ipswich, formerly belonging to the town, but now belonging to the trustees of the British Museum. How it left Ipswich was a mystery. Another book had reference to the river, the respective jurisdiction of the Corporation and the Admiralty; and there was also a valuable collection of charters, the whole collection being in fact an *embarras de richesses*, affording materials for a complete county history.

The Mayor said, with reference to Bacon's book in the town library, that he had taken measures to have it ready for inspection during the week, and he had some hope that it would be printed. Mr. Levien had mentioned it, and said it was probably well known to the people of Ipswich—he (the Mayor) was afraid it was not known to more than a dozen individuals.

Bury.

On Tuesday, Bury St. Edmunds was visited. The members were received at the Guildhall by the Ven. Lord Arthur Hervey, president of the Suffolk Archæological Institute, the Mayor (Mr. H. Le Grice) and corporation of the borough.

* During the week a neat and comprehensive little "Descriptive Handbook of Ipswich, the River Orwell, &c.," was published by Mr. Hunt. In future editions the antiquarian and architectural features of the town should be treated of at greater length. We may add that the *Ipswich Journal* and the *Suffolk Chronicle*, reported the proceedings of the congress very succinctly and correctly. The *Morning Post*, with a good general account, gave several of the papers *in extenso*.

After visiting the banqueting-hall, now used as the depository for the books of the West Suffolk Library, where an interesting collection of ancient drinking-glasses, belonging to Mr. J. C. Ford, and a model of Moyse's Hall, constructed by Mr. Ray, were exhibited, the company proceeded to the magistrates' room on the north of the entrance, where Lord Arthur Hervey bade the members of the British Association (who were headed by their president, Mr. G. Tomline), a very cordial welcome, and expressed a hope that they might be able to throw fresh light on many points of interest to the antiquary.

Mr. Gordon Hills then, with the assistance of a very large plan of the Abbey and adjacent churches, proceeded to give an interesting account of the church which successively occupied the site of the magnificent church of the Abbey, the remains of which are to be seen to this day, rich in historical associations. Mr. Hills traced the history of monastic establishments in Bury from the time when Sigebert, King of the East Angles, first built a church here and dedicated it to St. Mary, afterwards laying aside his kingly state and becoming a monk himself. Since that time a church of St. Mary had constantly reappeared in the annals of the town, even to our own day. In the course of his remarks Mr. Hills digressed into a dissertation upon the meaning of the termination of the ancient name of the town, Beodricsworth, leaning to the opinion that it served in Saxon nomenclature to mark the spot where two streams met, as was the case here and at other places mentioned. He not only pointed out the various parts of the sacred edifice itself, which he compared in size with several of our cathedrals, frequently to their disadvantage, but also traced the position and principal features of the adjacent monastic buildings, noting by the way many a point of interest connected with the remains yet to be seen in the Abbey grounds. Mr. Hills then took the party to the churches and gateway. In St. Mary's he called attention to the nave of the church and its roof, which he said was one of the most splendid in the country. The hammer-beams were the full-length figures of angels, and the corbels were figures of saints and martyrs, in pairs. The stained glass in the church was modern, 6,000*l.* having been spent upon the church at the time the windows were put in. The noble Norman Tower, the entrance to the ancient cemetery, was next visited, and Mr. Hills gave a great many interesting particulars of its history, its dilapidations, and its restorations. Mr. Hills discharged his self-imposed duties throughout the day very efficiently. At a luncheon which followed, he observed that it was very desirable the two parts into which the remains of the nave and choir of the old church had been divided should be thrown into one. He understood that they belonged to one owner, and that there was a possibility of their being thrown into one; and the Ven. Archdeacon Lord A. Hervey, in responding, said he agreed with Mr. Hills that it was desirable that the whole site of the ancient church should be thrown into one inclosure, and he hoped the British Archæological Association might visit the town again and find the suggestion carried out, as he believed it would be.

A visit was afterwards paid to Hengrave Hall and church.

At the evening meeting, in Ipswich, Mr. Edward Roberts gave an account of the day's proceedings. Amongst the papers read in the evening, Mr. Pettigrew in the chair, must be mentioned one by Mr. S. Westhorp, "On the Books and MSS. in the Town Library of Ipswich," which, he said, was one of the earliest town libraries extant. It appeared to have been founded by Thomas Smart, portman of the borough: the books left by him were placed with others in a room at Christ's Hospital School, afterwards used as the Grammar School-room. In the early part of the present century they were removed, and later placed in charge of the Literary Institution, but now taken charge of by the Corporation. The library contains 922 volumes, representing 659 works, of which only two are of the present century, and most of them theological. There are only ten MSS., all believed to have been given by Thos. Smart. Among the books Mr. Westhorp mentioned, was one printed in 1474, the year when the first book was printed from moveable types in England. Many of the rare books contained in the library were alluded to. It is very desirable that this library and that attached to the museum should be amalgamated and made the nucleus of a valuable library of reference, having the public documents arranged in chronological order, and under proper regulations, made accessible to the public. At the close, the mayor expressed his sorrow that so little care had been taken by the corporation to increase the library and render it available to the public, but he thought steps were about to be taken to erect a building in which to keep the books belonging to the town, and he hoped a few years hence the library would be of the greatest value. One of the advantges of the Congress of the Association being held in this town was found in the paper Mr. Westhorp had just read.

Afterwards Mr. Thomas Shave Gowing read a paper "On Suffolk Local Etymology," in which he showed the learning and acuteness he is known to possess. He said he was assisted in preparing this paper in a great degree by Domesday Book, which was made twenty years after the Conquest. There were very few remains of Roman nomenclature in the county. Some names of villages, &c., he derived from the names of tribes of Saxons and Danes; others he traced to the natural features of the places to which the names had been applied; some to Scandinavian theological terms; some to the customs of the places; and in this way he accounted for the name of almost every parish, hundred, river, &c., in the county and district.

Colchester.

Colchester occupied Wednesday, and proved, as might be expected, a mine of interest. The mayor having received the members in the Town-hall, the Rev. C. H. Hartshorne read a pithy paper "On the Population and Taxation of Colchester in the Time of Edward I." When that king held a parliament at Lincoln, in the twenty-ninth year of his reign, he was in great need of money to carry on the Scottish war. In consequence of certain concessions the Parliament granted him a quindime, or fifteenth, on all moveable goods, to be paid on the feast of St. Michael following. The particulars of the valuation of all the property in the town of Colchester, in the year 1296, when a seventh was collected, and also in 1301, when a fifteenth was collected, has been preserved on the rolls of Parliament, and of these he spoke:—

"By way of illustrating the nature of these returns," he said, "one entry purely of an agricultural character will show the worth of this kind of stock, and what was the value of property in the possession of a miller at that time.—William, the miller, had, on the aforesaid day of St. Michael last past in money one marc of silver; in treasure, one brooch of silver worth 9d., one ring worth 1s.; in his chamber, one robe worth 10s., one bed worth 3s., one cloth worth 9d., one towel worth 6d.; in the kitchen, one brass pot worth 2s., one brass plate worth 12d., one brass pipkin worth 8d., one hand-iron worth 6d., one tripod worth 4d.; in the granary, one quarter of corn, worth 4s., one quarter of barley, worth 3s.; two quarters of oat malt, worth 4s.; two pigs, worth 10s.; two porkets, worth 3s.; 1lb. of wool, worth 3s.; fagots for firewood, worth 2s. 6d. There are scarcely half-a-dozen burgesses whose tax was more. Take another specimen, one of the humblest kind:—Alicia Maynard had, on the aforesaid day, one brass pipkin, worth 10d.; one towel, worth 5d.—the value of which was 15d., and her tax of the quindime consequently 1d. There is but little variety in the movables that taxed for the gain time. Amongst the treasure the silver brooch is the chief thing. Of these there were 45. A few only possessed money. Two only had a ring of silver, usually valued at 6d.; some a mazer-cup, worth 1s. 6d., or a robe much worn (*roba debilis*). The town had 20 silver spoons, one coverlet, one gold ring, worth 8d., and two gold brooches. Upon making an analysis of the taxation-roll for collecting a quindime in 1301, the following facts occur:—Amongst 389 householders there appear to have been not half the number of beds. These scarcely exceeded 161, on the average valued at 2s. 6d. each. For these there were only 31 counterpanes and linen covers (*chalons et lintheamina*), probably sheets. The generality possessed a brazen pot, (*peneellus*) or pan. Fifteen had mazer-cups, usually valued at 2s. each. The clothing chiefly consisted of a robe, which is as frequently described as worn (*una roba debilis*). For instance, Elyas Aylwyne's taxable possessions consisted of only two things—one robe, worn, worth 4s. 6d., and a pig worth 1s." ..... "To recapitulate very briefly, we gain by this taxation of Colchester a very fair idea of the condition of the middle classes, such as tradesmen and artisans, as they existed in a borough town like Colchester in the year 1301. We have 389 as the number of the taxable householders. All those who really had anything worth taxing, like Alicia Maynard for instance, whose possessions where limited to a brazen pipkin and a cloth, worth together no more than 15d., were rated for the quindime. The assessment returned the value of all that these householders possessed at no more than 58*l.* 1s. 4½d., and the quindime due to the Crown as 34*l.* 12s. 7d. The contrast betwixt the state of Colchester in the reign of Edward I. and the present time shows how much the town has increased in population, in wealth, and in importance during the interval. So dissimilar, indeed, is the social condition of the inhabitants, that it would have been difficult to believe, without such evidence as that which I have used, that that class, now forming as it does the main support of England by its wealth, industry, and intelligence, could have ever struggled against such a want of the necessary conveniences of life. We find one-half of the town actually living without beds to lie upon, for most assuredly there would have been more beds taxed if they had existed."

At the conclusion of the paper, which was loudly applauded, Mr. Godwin observed that, as regarded the supply of beds, too much stress should not be laid on that, for the former inhabitants of Colchester might be considered rich compared with some portions of the population of London at the present day. He had, a short time ago, occasion to inspect the condition of the people in the metropolis, and could name a district where, with a population of 1,000, there were but eighty-nine beds.

The excursionists then proceeded, under the guidance of Mr. Hartshorne, to inspect some of the antiquities of Colchester. He conducted them, in the first instance, round a large portion of the town to show the remains of the Roman wall with which it is nearly surrounded, and a fine old Roman guard-house. After a walk he brought them to the castle, the keep of which, and part of the walls, still remain. In the keep there is a public library and a museum, which contains numerous Roman relics found in the castle and in the town. The "Colchester Vase" here is a very rare and interesting earthenware work, of what is called the Caistor ware, and has on it bas-reliefs of gladiators. The "Colchester Sphynx" is another remarkable item, and some of the bronzes and Roman glass are remarkable. A collection of original letters, addressed to the bailiffs and mayors of Colchester, were very tempting, but time would not permit an examination of them.

When the company were assembled in the library Mr. Hartshorne read a paper "On Colchester Castle." The castle is reputed to have been built by the Romans, the walls being composed of stones grouted together with mortar, with courses of bricks or tiles at intervals, in the manner of the undoubted Roman walls round the town. Mr. Hartshorne, however, contended that there was sufficient evidence to prove the castle to be Norman, and that it was built with materials from Roman edifices. The entrance-gate was, he said, undoubtedly Norman; and, having gone minutely over every portion of the structure that is left standing, he felt confident that the whole of the castle was built subsequently to the departure of the Romans. The keep was larger in diameter than any other Norman keep in the kingdom, but not so high, and the walls were 12 ft. thick. It was clear, he thought, that the castle was erected before the year 1130, and he inferred that the keep was complete in the year 1170, and in 1180 he believed the whole building to have been finished, as it appeared that it then required reparation. He was certain, from the character of the building, that no portion of it could be attributed to a period earlier than the Norman Conquest, and expressed his belief that it was erected in the reign of Henry I. In support of this opinion he quoted the record of the burial of an individual at that date, described as the builder of Colchester Castle. To use Mr. Hartshorne's own words,—

"No doubt while there exists a superabundant amount of evidence to show the Roman occupation of Colchester in the reign of Claudius, there is none to prove its antiquity as a settlement earlier than this nation made on the southern coast at Pevensey, Lymne, Dover, and Richborough. Roman settlement in Colchester is shown by its name alone. It is visible in some of the materials of which its castle is built, and by the numerous objects of art which have been discovered in its precincts. But it is equally true that no portion whatever of the present structure can be attributed to a period before the Conquest. No person in the least degree conversant with the common arrangements of a Norman castle, or with Norman architecture, will have the smallest hesitation in stating it to be the work of that period.

Yet if this were not conclusively established on architectural data, demonstrable by the deductions which naturally, as it were, spring from comparing one building with another, the history that has been transmitted is a sufficient proof of its age, as well as the name of its founder.

In a document, printed by Dugdale, in his 'Monasticon,' there occurs the following important passage, which must for ever set all doubt upon this controverted question at rest. The writer of the genealogy of the founder of Tintern Abbey, speaking of one closely connected with him, uses these words, '*Predicta Rohesia Superstes, et remapta Eudone Dapifero Regis Normannici, qui construxit Castrum Colcestræ, cum Canabia, in honore Sancti Johannis, ubi ipse fuit sepultus tempore Henrici primi.*' This genealogy shows that the Rohesia here mentioned was the daughter of Hascul de Harecourt, she married for her first husband Richard the son of Earl Gilbert, who was among the most leading of the Conqueror's followers. Her second husband was Eudo le Dapifer, who is here spoken of as the builder of the Castle of Colchester and the founder of the Abbey of St. John. Between the accession of Henry I. in 1100 and the death of Eudo Dapifer in 1120 there was ample time for him to construct the castle. Still more time in the reign of William Rufus is included, which would widen the conjectural period of its erection nearly thirteen years more, and extend the interval during which the building must be confined, between 1087 and 1120. It is not improbable that it was built in his reign."

A short discussion ensued, from which it appeared to be the general opinion that the castle is not Roman. Mr. Gordon Hills, Mr. Godwin, Mr. Roberts, and several other gentlemen con-

curred in that opinion, and nothing was adduced in proof of the theory which had been entertained in the neighbourhood that the castle is Roman. In the course of the conversation other known instances were quoted of Roman materials being used in later structures.

At St. Botolph's Abbey, Mr. Edward Roberts took the guidance and gave an outline of the history of this abbey. It was founded, he said, in the beginning of the twelfth century by a monk named Ernulph, who became the first prior, and the work of the remains was of about that date. Besides the ruins of the church, but little trace of the monastery remains, and he regretted that excavations had not been made, and the extent of the building ascertained by this means. It was said, although the assertion was disputed, that this was the first abbey inhabited by the Canons regular of St. Augustine. The dimensions of the church are about 100 ft. in length and 26 ft. in width, besides the aisles. There appeared to have been two towers at the west end, and a gallery all round the church. The principal feature in the ruins are the massive Norman round columns, which, as is the case with almost the whole of the remains, are constructed of old Roman materials, or tiles similar in form. The west front is a well-known example of the architecture of the period, showing interlacing arches in brick, and the centre doorway is exceedingly handsome. Immediately over this door are indications of a wheel window: whether contemporary or not is uncertain.

The next halting-place was St. John's Abbey Gate. This is the sole remnant of the once famous and powerful Abbey of St. John, which was founded in 1095 or 1096. The gateway is in the Perpendicular style, and built of cut flint stone.

At Holy Trinity Church the chief interest in the church is centred in the tower. Mr. Roberts said he thought it was not Saxon—it had every characteristic of a Norman tower built with old Roman materials. The point which had been chiefly relied upon to prove that it was Saxon was a pointed doorway in the west wall of the tower, made entirely of Roman bricks. Mr. Godwin observed that he could see no reason whatever why the doorway which had a straight-lined arch should not be regarded as a Saxon work. It was either very Early Norman or Saxon, and he did not see why it should not as well have been built before as after the Conquest. To this question we may perhaps return.

The Mayor gave a luncheon in the town-hall, at which Mr. Tomline, the president, Mr. Cobbold, M.P., Mr. Pettigrew, Mr. Hartshorne, Lord Alfred Hervey, Mr. Roberts, Mr. George R. Wright, and others, spoke. To Mr. G. R. Wright, we should say, much credit is due for the general management of the business of the week.

At the evening meeting in Ipswich, at which Mr. Tomline presided, Mr. Thomas Wright, M.A., read a paper on the manuscript songbook of an Ipswich minstrel of the fifteenth century. He said the late Mr. Fitch, of that town, had some years ago a manuscript of songs and carols, apparently of the age of Henry VI., and which, probably, constituted his stock-in-trade. This MS. book was found in the municipal records of the borough of Ipswich, and it being thought that it had no business there, it was taken away. Mr. Fitch gave it to him (Mr. Wright), but being persuaded that Mr. Fitch did so in ignorance of its real worth, he insisted on returning it, and it was now in a private collection. It was a very valuable MS.; indeed he knew of but one similar, which was in the British Museum, and was far inferior to it. This had been published by the Percy Society. Mr. Wright traced the history of mimers and minstrels from the earliest ages to the Mediæval *jougleurs* or *jonglers*, as they were erroneously called. The little volume of the Ipswich Minstrel contained good examples of how the minstrels at that time catered for the public taste.

In the course of the evening, the discussion as to the date of the castle of Colchester and of the tower of Trinity Church was renewed, when Mr. T. Wright expressed the opinion, and adduced evidence to prove it, that the tiles which enter so largely into the structure of the walls were not of Roman manufacture. The Saxons and Normans, he said, adopted the style of brick-making which had been practised by the Romans; but the structure of them was different, and they could be distinguished. Mr. Roberts said, no doubt the Normans made tiles, but he thought at Colchester Castle portions of old Roman mortar were distinctly to be traced sticking to the old tiles, which seemed to prove that they were old Roman tiles used by the Normans. Mr. Hartshorne thought there certainly were Norman tiles in the castle.

Mr. Roberts then read a paper, written by Mr. Raphael Brandon, on the "Timber Roofs of the Churches of Suffolk," with the assistance of some drawings of Suffolk timber roofs. The paper was of considerable length, and contained much interesting matter on the subject. Among the drawings on the wall was one of the roof of Grundisburgh Church, with double hammer-beams; and the writer observed that the double row of hammer-beams was almost, if not entirely, peculiar to Suffolk.

Framlingham.

On Thursday the Association went off to Framlingham, where Mr. Phipson acted as *cicerone*, and at the castle, of which the remains are very fine, he read a paper. There was, he asserted, a castle on this spot as early as the sixth century; and soon after its demolition, in 1174, the present castle was built. Roger Bigod was in possession, as was the same family of the preceding one. In 1215 King John appeared in arms, and Roger Bigod surrendered, but on the 21st of the following March was restored. It continued in the possession of the Bigods until the 25th of Edward I., when the family becoming extinct, it reverted to the Crown, and was by the king given to his second son, Thomas de Brotherton, Earl of Norfolk. On his death it descended to his daughters, Margaret and Alice, and on the marriage of the latter to Edward de Montacute it became his. He left it to his daughter, who married the Earl of Suffolk, whence it came to the Mowbrays, Dukes of Norfolk, and then to the Howards. On the attainder of Thomas, son of John Howard, it reverted to the Crown, and at the end of the reign of Henry VIII. Mary, who having been presented with the castle, retired here, made it the rallying point for her followers previous to asserting her right to the crown. Mary restored it to the duke, and upon his execution it passed into the hands of Elizabeth and James I., the latter of whom restored it to Thomas, Lord Howard. Subsequently it came into possession of Theophilus Howard, Earl of Suffolk, who sold it to Sir Robert Hitcham, whose utilitarian spirit prompted him to bequeath it for charitable purposes, directing that all the castle, excepting the stone buildings, should be pulled down,—a direction which has been only too faithfully followed. A great number of tubular perforations, both horizontal and vertical, which pervade every point of the outer walls, gave rise to a variety of conjectures as to the purposes for which they were intended. A man, who we suppose has charge of the castle, said he had pulled decayed wood out of some of them, which would seem to indicate that they were apertures in which wood had been inserted for bonding. Another suggestion was that they might have been intended for ventilating purposes.

The brick chimneys upon the towers were examined, and it was generally agreed that the ornamented bricks were not moulded, but cut into the pattern they are made to assume. It is probable that the bricks were cut before they were built up, and that this device was hit upon to avoid the difficulty of moulding an elaborate pattern. After making a circuit of the outer walls the party returned to the courtyard of the castle, and Mr. Hartshorne made a few observations, generally indorsing the conclusions Mr. Phipson had come to.

Framlingham Church was the next point, and the party was increased here by the addition of a large number of the inhabitants of the town. The church has recently been thoroughly cleaned, for the first time for thirty or forty years, and is now in good condition.

Dennington Church was afterwards visited: this is one of the finest parish churches in Suffolk. Mr. Phipson read a paper describing the wood benches with which part of the church is seated: these are fine specimens of wood carving. There are two chapels at the east end of the aisles, separated from them by screens, in the Perpendicular style. These screens are painted, and are in a good state of preservation. In the chapel on the south side is a handsome monument to Sir William Bardolph and his lady, Joan, the former of whom died in 1439, and the latter in 1445. Their effigies are upon the top of the tomb, and in excellent preservation. Mr. Planché gave a description of the armorial bearings on the tomb and the costume of these figures.

The Rev. E. C. Alston read a paper on Dennington, and the party then adjourned to the rectory, where they were hospitably entertained.

The members of the Association met at the Council-chamber of the Town-hall, Ipswich, in the evening, when Mr. Jas. Heywood, F.R.S., took the chair, and took occasion to caution the members against purchasing antiquities without a careful inspection. He related some anecdotes to show that a large trade in antiquities was carried on both in England and on the Continent. In one case he was told by a lad who was manipulating some recently made medals in a bowl, that he was "making antiquities." The boy was, in fact, stirring newly-made medals in a bowl of acid to give them an appearance of antiquity. Statues were in some instances steeped in acid for the same purpose, that of giving them an antique appearance. The chairman also took occasion, as they were approaching the end of the congress, to speak in high terms of the pleasure which the visit had given the members of the Association, both on account of the hospitality with which they had been received and the interesting antiquities they had been enabled to examine.

Mr. E. Roberts then read a paper "On the "Round Towers of Churches in East Anglia," which was illustrated by numerous sketches taken by himself. He stated that, with the exception of seven detached instances in various counties of England, the whole of that class of towers are to be found within the limits of the Saxon kingdom of East Anglia. Of the remainder, two are in Cambridgeshire, two in Berkshire, two in Sussex, and one in Northamptonshire. The materials of which these towers are constructed are generally local, as is, indeed, the case of nearly all Mediæval works, except in the most important materials of Caen stone and Purbeck marble. The flints in these towers are almost the only material; in others the cement stone is intermingled. Till within fifty years all early round arched work was called either Danish or Saxon, but Mr. Roberts believed that a nearer approach to their correct chronology was being arrived at by a rigid comparison of records with the remains. From the dedications of these churches it appeared that there was no Danish or Saxon saint among them, as would have been the case had they been constructed earlier than the eleventh century. He said he had examined a great number of the round towers, and in every case they have—though varying in diameter from 7 ft. 7 in. to 12 ft.—walls about 4 ft. thick, with only one entrance, viz., from the east, and therefore into the body of the church. The windows, where they remain unaltered, are narrow loophicles with plain arched heads pierced out of the stone. With few exceptions other windows have been inserted at every age since their erection, and either the churches have been rebuilt or they have been attached to the towers. In only one instance, that of Fitton, had he found what he believed to be the type nearly complete, though enlarged, of all these buildings. In that case the tower has a Norman billet moulding as well as a centre shaft to the windows. This proved it could not be Saxon, for a Saxon upper story could not have been placed on a Norman substructure. All these churches Mr. Roberts said he believed to be Early Norman, and to have been simple parish churches. The conclusions at which he had arrived were—1st. That these towers were probably built by one band of workmen, and are all of one age, as they have precisely the same characteristics, having the same materials, shape and size, and are without staircases. 2d. That they were built for use as bell-towers. 3rd. That the towers have remained, while the churches have been in many cases rebuilt. 4th. That they were erected about the year 1100 or 1120 to 1130 or 1150.

A discussion ensued after the reading of the paper, in which Mr. Phipson dissented from Mr. Robert's opinion as to the limited range of the period within which they were constructed. He said the reason of these towers being built round was that they could be erected more substantially of that form with the materials of the district, and it avoided the necessity of having large building stones for the angles.

Mr. Phipson then read a paper "On a Heart Burial at Holbrook Church, Suffolk."

In the discussion that took place on the paper, reference was made to the practice, at the time of the crusaders, of sending the hearts of those slain in battle to England to be buried in their native land; and it was thought that that practice had given rise to the custom of burying hearts separate from the bodies in other cases.

A paper on "Suffolk Emigrants to New England in 1634," contributed by Mr. Hopper, was read in his absence by Mr. G. R. Wright. The paper gave a sketch of the circumstances which induced upwards of 600 inhabitants of Ipswich and the neighbourhood to emigrate at the period in question. Mr. Reed stated the results of the emigration. The emigrants, he said, had settled in the state of Massachussets, where they founded a town they called Ipswich, and they prospered so well that the superabundant population made an offshoot also into the same state, and founded the town of New Ipswich. Daniel Webster, the celebrated senator of the United States, was a descendant from one of the Ipswich emigrants of 1634.

Mr. Levien took occasion, in reference to the alleged loss from the town library of the portrait of the preacher who had instigated the emigration, to charge the corporation of Ipswich with neglect of the records in their possession. He said in the British Museum there were more documents relating to the county of Suffolk than of any county in England, many of which had been stolen owing to the culpable neglect of the corporation. The Mayor said that as Mr. Levien, who was one of the officers of the British Museum, had admitted that his establishment was in possession of stolen goods, he hoped that he would take measures to restore the property to its rightful owners. Mr. R. N. Phillips, a member of the corporation of London, sympathised with the mayor of Ipswich on the reception of the town's property in that receptacle of stolen goods—the British Museum. He remembered that some valuable city records which had been surreptitiously removed had been traced to that place, and counsel's opinion was taken whether law proceedings should not be instituted for their recovery; but the opinion was against such a step.

Mr. Heywood mentioned the case of a Runic cross which had been stolen from a church in Lancaster, and is now in the Manchester Museum; and he said it was understood that when property was so appropriated it could not be reclaimed.

Helmingham and Orwell Park.

On Friday, early in the morning, the road, and not the rail, as on previous occasions, led us to Helmingham, the seat of Mr. J. Tollemache, M.P., where we were met by the rector, the Rev. G. Cardew. This house is a capital specimen of early Tudor architecture, built round a quadrangle, and surrounded by a moat, that is still filled with water, and the drawbridge of which is drawn up every night. Mr. Cardew said there was a tradition that it had been so for eight centuries, but it was certain that for 300 years the operation had not been once omitted. The Hall was, the rev. gentleman said, built in the reign of Henry VIII., by the second Lionel Tollemache. In Edward I.'s time it was probably the property of his queen, Eleanor. The present hall was built on the site of the old hall, which was erected in the twelfth century, by Bartholomew de Creyke, and he had no doubt that there was before that an Anglo-Saxon farm at this spot, and from the quantity of Roman remains he had found he believed that there had been a Roman villa there. He had found Roman remains in every part of the parish; he had no doubt whatever that there was a Roman village on that spot. One of the Tollemaches entertained Queen Elizabeth, in the year 1561. Several memorials of her visit, such as a lute which belonged to the queen, are preserved here. In the hall of the house there is a beautifully carved oak fireplace; indeed, the wood-carving throughout the house is very fine. In the dining-room were exhibited some leathern "black-jacks" of very formidable dimensions. The walls of the drawing-room, as are those of the dining-room, are hung with family portraits. The library contains many old and valuable books. The most curious is an Anglo-Saxon manuscript of the ninth century, a translation by Alfred the Great, and a copy of the first book printed in England by Caxton.

At the church, Mr. Cardew explained all the matters of interest connected with it. The contract for the erection of the tower of the church is, it appears, in existence—it is between the builder and John Talmidge, as the Tollemache family were then called, and the sum for which the tower was built was 30*l*. It is dated 1487, but the church was not completed till Henry VIII.'s time. The church was built on the old cemetery, and in digging the graves at the present time they dug through the old ones. Mr. Cardew showed his collection of pottery found during the excavations, and next led the party to a collection of drawings of the skeletons, and "The Wilderness," an enclosure on the north side of the churchyard, and last of all showed the skeletons *in situ*. In one case, a grave had been traversed by a moat, which is now filled up, and which was an ancient work in itself, and the skeleton which the grave contained is cut off at the knees; in another, a female skeleton lay with that of a child upon one arm; and in a third are the remains of a powerful man, who appears to have been carefully buried after suffering great mutilation. The fragments of pottery and other matters in the superincumbent earth are Roman, and that leads Mr. Cardew to suppose that the remains are Romano-British or even earlier. Roman remains abound on all sides. In the fields at a short distance from the rectory, Mr. Cardew has found traces which lead him to suppose that Roman villas existed there, and that houses were probably in existence upon their sites to as late a period as the reign of Henry VIII.

The enthusiasm of the visitors found vent in three hearty cheers for Mr. Cardew at leaving; and many would have remained longer but that the President expected all at his residence, Orwell Park. Here, 120 in number, they were received; and, after examining the pictures the house contains, wandering on the springy lawn overlooking the Orwell, and getting sea-breezes amongst beds of bright flowers, not a common occurrence, dined admirably in the conservatory cleared for the occasion. Dinner over, Mr. Pettigrew, in his usual happy manner, conveyed to the President the good opinion of the members; and Mr. Tomline, replying, drank the health of the ladies, and called for a volunteer to second it. Mr. Shave Gowing, as the oldest bachelor present, responded to the call, and left himself without an excuse for remaining so, by the opinions he expressed of the objects of the toast. But we must now gallop to a close. In the evening the mayor gave a *conversazione*, whereat Mr. Gordon Hills compared the round towers of Suffolk with those of Ireland, exhibiting his large collection of drawings of the latter; and this evening, although a visit to Lavenham and elsewhere was arranged for the next day, closed the real business of the congress, the President taking occasion to thank, in one general vote, the various persons and bodies who had contributed to the success of the meeting. We have omitted mention of several of the papers read, have referred but briefly to the places visited, and have not described the temporary museum of antiquities which were brought together; but we have probably said enough to give a general idea of the proceedings, and to justify us in terming them, in the words we used at starting, "altogether satisfactory."

TERRA-COTTA AND LUCA DELLA ROBBIA WARE, CONSIDERED ON THE PRINCIPLES OF DECORATIVE ART.*

Some five-and-thirty years ago, when living in the moorlands of Staffordshire, not many miles from the Potteries, it was my good fortune to become acquainted with that amiable and able man, the late Herbert Minton, and whenever anything brought him to Alton Towers, or I happened to go to Stoke-upon-Trent, our conversation, sooner or later, always got upon the subject ever uppermost in his thoughts, the potter's ancient, time-honoured art. His then ambition was to keep a place upon one of the topmost branches of the commercial tree, by manufacturing the finer sorts of hardware and porcelain, richly gilt and beautifully painted tea and dinner services in china, and other articles of household requirement. His first flight, in soaring after a higher kind, was the production of dressing-table candlesticks, wreathed with garlands, and plates with fruits and flowers in raised work, for the ornament of a lady's boudoir; probably the very first of the latter which was made by him, he sent over to me to look at, and the then Countess of Shrewsbury bought it; and at the sale, in 1857, at Alton Towers, it was sold under the catalogue number 1,228.

During one of those delightful chats I had with Minton, I urged upon him, specifying the various purposes to which they might be decoratively applied, the imitating of those coloured, glazed, Mediæval tiles once so generally used in flooring the chancels of our old English churches. "But where can one find them?" asked my friend. "In many places," I answered; "for instance, in Great Malvern Priory Church; many such are described and figured in the 'Archæologia' and other antiquarian books." "Though, perhaps, quite well enough for your studies, that will hardly do for my purpose," said Minton; "I want not merely to see but to handle—to turn over, to look at, on both sides, to closely examine specimens of unknown pottery and china; to find out, as much as may be, the way in which they were wrought and ornamented. So, too, do my workmen. But I will bear your suggestion in mind; and we will talk of it another time." We did; and he told me "it would not pay." A few years afterwards he tried, and the venture not only "paid," but paid splendidly; and so great was its success, that such a revival of olden pottery not only has got into very wide use, but in many places and with many people, the produce itself now goes by no other name than that of Minton tiles. The fact is that Minton, on more occasions than one, lamented to me the sad want in England of a history, in specimens, of the ceramic art in all its many branches—of all ages and nations—for the improvement of our own people, in its manufacture; and, at one period, his thought was to try and mend the want himself by beginning to bring together samples in a museum at Stoke-upon-Trent.

But, at the time, this deficiency of England was the deficiency of every other country in the world. Let us begin with a land where the potter's craft had been always held in high repute—with the great Italian art-centres. Of old, as well as ancient Sicily, Magna Græcia was famous for its beautiful vases of burned clay, elegantly shaped, and most artistically figured with passages from Homer and the Greek dramatic writers, in black upon a red ground, or in red upon black; in some instances, too, in various colours, but always overlaid with a fine thin delicate glazing; and that instructive case, on loan from Mr. Witt, shows us what was the care which the potters of those days took to bestow graceful shapes and becoming ornamentation not merely upon great, but little things—upon the common hardware vessels of every-day household use. What the ancient Parthenope was to Magna Græcia, Naples still is to those same portions of South Italy that composed it, its queen, its capital. Itself, too, not long ago, was celebrated for its Capo di Monte ware, as it still is for its imitation of the ancient fictile painted vases; and that curious figured and coloured sort of pottery that goes with some by the name, for want of a better, of Abruzzi ware, and just now creeping into English notice, some fine specimens of which are in Lady Holland's possession, was, and may be still is, the production of its provinces. Yet, putting aside its magnificent collection of old fictile vases, Naples neither has nor ever had a specimen-history of ceramic art. Coming northward, we get to Rome; and, casting a hasty glance at the Capitoline galleries, which in any other city would be looked upon as a first-class magnificent museum, we hurry to the Vatican,—the glorious Vatican, that hill of marvels, the art-world's sun, which has never been as yet eclipsed. Yet there, though we behold so many wonders, wrought by the ancient Heathen's chisel, so many master-pieces of the Christian pencil, we find, with the exception of a few fictile vases in the library, absolutely nothing that illustrates what has been done in burned clay, coloured or uncoloured. Yet in the Roman States was one of its most useful and beautiful branches invented, and carried to such high perfection that a city of the Papal patrimony, Faënza, gave, as far as France was concerned, name not merely to one, but all kinds of household earthenware, called to this day by the French "*faïence*;" and scholars of Raffaelle's are said to have furnished the drawings for the subjects figured on many of those pieces of earthenware done at Urbino, an ancient fief of the Holy See. But at Florence, once so renowned for its master-hands in all burned clay works, how fares it there? Though the vast halls of its magnificent public gallery are filled with so much that is beautiful of ancient and more modern art, it has no collection of earthenware.

Rich as is that fine city in that kind known by the name of Della Robbia ware, its numerous valuable specimens are scattered about among its several churches, not always placed in the best positions for study, and rendering

* By D. Rock, D.D. A lecture delivered at the South Kensington Museum, and briefly reported by us at the time.

the comparison of one piece with another very hard and unsatisfactory, if not quite impossible. In all and each one of the art-collections throughout the great cities in upper Italy we speed no better. Going to Germany, even at Vienna, in that very interesting and most ancient of all art-museums the delightful Ambras, we find nothing to our purpose. The same disappointment meets us at Munich, at Berlin, ay, too, at that city of china by pre-eminence, Dresden, with its green vaults and its japan palace. So also in Belgium and Holland. Getting nearer home, and halting at Paris, not even at that most charming place the Hôtel Cluny,—not even at the splendid Tuileries (and as we all know the word tuileries means simply a place where one kind of earthenware is made—a tilery); in fact, nowhere in that great capital,—shall we be able to come upon what we seek for. Reaching England at last, and hunting this land over, what should we have met with of the kind but only four or five years ago even in London, in the so-called British Museum — I say advisedly "so-called," for the trustees have, over and over again, refused to enrich its galleries with art-works wrought by Britons' and Anglo-Saxons' hands — scarcely anything better than the Hamiltonian collection of fictile vases, very fine and very precious of its class, it is true, but which, after all, affords but sorry help for training the people's taste and bringing up our workmen to know all the beauties and capabilities of the potter's art, which has become, is more and more becoming, so important and so profitable a branch among this country's manufactures.

Everywhere museums have been far too exclusive about the objects they collect, and thus, while catering for the refined tastes of a certain upper few, they have quite forgotten the requirements of the lower millions. But, mesecms, in storing such national establishments, not only people of classic education—those initiated into all the niceties of high art, either in ancient sculpture or the various schools of more modern painting—but other members of the community should find that they also had been cared for. Thus the historian, who, besides writing of battles and of politics, wanted to say how individuals dressed abroad and lived at home, and what, too, were the ornamental products of the period; as well as the person who was seeking the correct costume wherewith to clothe the characters of his picture or his play, and how to paint the scenery, might come at once upon what they needed. But the working classes, too, ought to be able to learn how, not merely Egypt, Greece, and Rome, but their own land and those other countries nigher home and people nearer the present times, thought and embodied their thoughts, not only in marble and on canvas, but in clay, in copper, and in wood; not only in gold and silver, and enamel, but in iron, in glass, in silk, in linen, and in leather.

There lived, for years had lived among us, a man who had a heart wide and warm with love for the land of his adoption, and a head full of thoughts for its material advancement and interests; wishful for the happiness and various comforts of its people, poor as well as rich, with tastes carefully ripened to a quick and exquisite perception of the beautiful in nature, of whatever was elevating or instructive in any of the arts. This man was the late and much lamented Prince Consort. Gifted with far-sightedness, he not only saw where lay our several art-deficiencies, and why they would still stubbornly linger among us, even amid our several social improvements; but he saw, too, how best and soonest those artistic shortcomings might be remedied. This great, good man,—great, not as some understand the word, on the battle-field, in strife and the shedding of blood, but in the far nobler works of peace and civilizing progress,—among his other meritorious deeds helped forwards, with an earnestness that never tired, the project for refining the public taste and raising the artistic character of the nation's produce, by the establishment of a museum that should be able, while it recreated, to afford instruction to every class. As a small, young thing, such a museum began its life at Marlborough House. The bantling soon outgrew its cradle, and had to seek another and a much wider sheltering-place. This it has found here, where the practical good sense of the nation is making for it a lasting home, worthy of its illustrious originator, worthy of its destination, worthy of the British people. Nowhere is art more splendidly palaced, nowhere are her many offsprings so advantageously displayed, as in those noble courts, so admirably contrived, and lighted so ingeniously by night, so magnificently ornamented, that form the South Kensington Museum.

Of the multifarious objects brought together, for study and comparison, within these walls, there is a very important class—I mean hardware, in all its several branches. So keenly alive to the importance, for the country, of this article, seems the department to have been that, at every opportunity, it has increased its specimens as much by their value as their number until they have, I do not hesitate in asserting, become the most magnificent series of hardware under its different forms in the world; for I can say, that neither in Italy, Germany, nor France is there such a complete instructive collection as we have in this Museum; and although it be not yet perfect, still it is most gratifying to behold how, year by year, it is growing towards completion. Burned clay, in all its many appliances, is represented—and then but poorly, in a few museums; in most, not at all. Here, however, this wide class of art-work is not merely the first in time and finest in sort of the kind in Europe, but so richly full of rare and instructive samples that, while hushing the laments, it would have awakened the admiration and won for its collectors the grateful thanks of Minton had he been given to live and witness these our days.

To notice, even hurriedly, in a lecture, the whole or any great part of the many interesting objects exhibited, would be impossible: for one occasion, a single section is enough to claim, and shall receive attention.

When honoured by the Lords of the Committee of Council on Education with an invitation to lecture before the students of the National Art Training School upon the objects of the Art-Museum, the invitation was accompanied by a wish that the subject might be so viewed as affording illustrations of the principles of decorative art. Indulged in my choice of discoursing upon the so-called Terra-cotta and Luca Della Robbia Ware, and agreeing most heartily in the practical wisdom of their lordships' suggestion, I shall seek from within the Museum itself such objects as more fittingly exemplify my observations; and if the things themselves are not immediately before your eyes upon the table, it is because several of them are too large, too precious, to ask for and have unfastened from the walls, where I hope they may hang, in their present well-arranged order, to delight and instruct the world for ages yet to come. At the outset I ought to say that, to singularize each and every valuable article belonging, in the museum, to our subject, would be as tiring as useless. When, therefore, I happen to select one specimen, it is not that all the others are less important in art, or under it in value, but only less apt, as I look upon them, to illustrate that particular point upon which I want to throw, as best I may, some little light.

"Terra-cotta," as you may know, is Italian, and signifies "cooked or baked earth," and we Anglicise the expression as "burned clay." Though, in strictness, applicable to all the appurtenances of household use—to everything, in fact, made out of that substance—the term is here employed in its restricted sense, and must be understood as referring solely to such of its manipulations as bear about them a decorative plastic character.

The so-called "Della Robbia Ware" is burned clay, presenting itself to us under the form of its very highest—most artistic development wherein, to all the beauties of statuary, it has given it the additional charm of colour heightened by bright glazing.

Begin we now with "burned clay," looked at in its first simple shape, that is, as a decorative ornament, with no other than its own natural self colour about it.

Among the materials employed by man in his earliest attempts at anything like decorative art, one—perhaps the very first—was burned clay; and of the use of it as such, we shall find proofs in every country. Passing by the land of Sennaar, with its Babel tower, and reaching the valley of the Nile, sure may we be, from the many curious fragments gathered there, that while the Hebrews were making their bricks, their Egyptian masters' hands were busy in fashioning more artistic works in clay. Like Egypt, Phœnicia, both at home and in all her settlements on the northern shores of Africa and in Spain, displayed the skill of her people in the use of the same material. In Greece, not the earliest of its worthies only, but the mightiest of its many mighty masters—Phidias himself, in all the full bloom of his fame, thought it not beneath his own glory nor the sculptor's art, like them, to work in clay. Go where you will, in Italy, and dig where once stood its oldest cities, and you will find specimens of decorative burned clay. That delightful writer on Italian art and artists, Vasari, tells us in his introduction to the "Lives," that at Chiusi, one of the ancient towns of old Etruria, tiles in burned clay have been dug up from the earth there, on which were figures in low relief, so admirably executed, and in so good a manner, that all might perceive the arts to be far from their first attempts when these were formed—nay, rather from the perfection of the work, it might be fairly inferred that they were nearer to their highest summit than to their origin. Had good Master George been treated, like ourselves, with the sight of that long lost but now unburied city of Pompeii, and walked its streets, he would have beheld the practical use to which those old Romans put works wrought in clay, as he found the shop-keeper's sign of his trade done in that material over his door: thus, the milkman showed a goat; the wine-seller displayed two men carrying between them, slung upon a pole, a narrow, long, two-handled pitcher, then called an amphora, in which the custom was to store their wine; nor would the observant George overlook in the museum the painting that the schoolmaster hung out, showing the animated scene of the idler or truant horsed upon another's back, or boy plaintive, in more senses than one, against birch, coloured to the life and quite in accordance, as the Austin friars at St. Giminiano's thought, with the discipline followed by the pedagogue of Madaura, for whipping Greek into the reluctant little Austin, afterwards so good, so great, so famous,—done, too, in such a manner as would have joyed the heart of any rod-loving Dr. Busby.

That our forefathers the Britons, even in their earliest or Celtic period, long before the coming hither of the Romans, knew somewhat of the potter's art, we learn from the vases and the beads of clay, ornamented after a manner, found in their cistvaens or cromlechs—so their stone-built graves are called. By the way, however, and as a caution, it may be well to notice how great have been the mistakes, on this point, committed by persons who, though otherwise well educated, have learned little of art and less of archæology. Writing, on the 1st of February, 1715, from the Charter House, London, to that laborious editor of England's mediæval Latin literature, Thos. Hearne, at Oxford, a Mr. Bagford says: "I shall take notice of a very great curiosity, a brick, found in Mark-lane, about fourty years since, 28 ft. below the pavement. Near to this place were dug up many quarters of wheat burnt very black, but yet sound, which were conjectured to have layn buried ever since the burning of this city about 800 years before. This brick is of a Roman make, and was a key-brick to the arch where the corn was found. 'Tis made of a curious red clay, and in bass-relief on the front hath the figure of Sampson putting fire to the foxes tayles, and driving them into a field of corn; and this brick is at this time preserved in the Museum belonging to the Royal Society in Fleet-street, from whence I have caused an accurate draught of it to be sent you," &c. So much did Hearne think of this discovery, that he printed the letter and engraved the drawing for the first volume of his Leland's "Collectanea." This brick is Flemish, of the seventeenth century, and one of several that together gave the history of Samson, as may be seen in that curious large old brick fireplace from a house at Antwerp, and now put up in the south-west corner of the south court in this Museum. Doubtless it formed an ornament to some house burned down A.D. 1666, during the great fire of London; but such is its style of design that, at the present day, no one who knew anything of art or antiquities would dream of its being old, much less of the Romano-British period.

The free and frequent use, in architecture, of decorative burned clay, during the Mediæval period, all over the Italian peninsula, is something astonishing, and deserves the close attention of every art-student who visits that instructive land. Though Alps and Apennines could give its people stone and marbles, yet the while we were building our churches and castles, everywhere throughout this country, of stone, even in the fens and roadless swamps of Lincolnshire, the Italians were erecting their edifices, sacred and secular, of brick, with their ornamentation in burned clay. The observant traveller who goes to Rome

brings back with him lasting recollections of its several fine, tall, many-storied belfries, built of brick, saving some few low marble columns with their imposts, to the two small arches of the windows. Near Vesta's Temple, by the Tiber, stands that curious old house, once Cola di Rienzi's, all of brick, elaborately wrought into so many kinds of decorative form. Ever and anon, in some of the old out-of-the-way churches at Rome, do we catch a glimpse of some nice piece of burned-clay work, which has been spared by the ruthless hand of the would-be Classic architects in the sixteenth and seventeenth centuries. All over Tuscany are scattered fine examples of this style, and the whole of Lombardy is full of them. In Verona they often start up before us. Pavia shows you the west front of St. Pantaleoné's; Cremona, its cathedral; Monza, its town-hall; Mantua, its ducal palace, and St. Andrew's, all rich in the splendid examples of what has been and yet may be done for architecture in its decorative members by the use of this material. Though last to be mentioned, almost the very first in importance is the great hospital at Milan, in all likelihood the finest specimen as a whole beyond the Alps of what decorative burned clay can do; and, perhaps, better still, how it should be done, as far as its manipulation goes, to bring out all its beauties. Here we find that the squeezing was but the first part of that process through which those ornaments were made to go. Thrown out of their moulds, and while yet soft enough, they were, as needed, wrought again by hand, before being fired, and thus had given them a softening grace and a crispy sharpness which the modelling stick of an artist can alone bestow.

Here, at home, we are not without several instructive instances of our own; and the way in which burned clay ornamentation, more especially in stacks of chimneys, was with great effect employed at Thornbury Castle, Gloucestershire, Eton College, and Hampton Court, besides other places, should not be overlooked. All over Sussex the chimney-stacks of its homesteads attract admiring notice.

Thus far, for the greatest number of samples in architectural decoration, we have wandered on the Continent, and have pointed mostly to what may be only seen abroad. For specimens in higher art, we happily need travel no further than the well-filled splendid halls of this museum, which will show us at a glance how burned clay, after all its manners, whether in its own native tint, or variously coloured and wearing a bright glaze, has been and may be, with the best results, applied to statuary.

As the subject we have before us falls of itself into two parts, we will begin it by taking in hand "burned clay," to look at it under its first simple shape, that is, as a decorative ornament with no other than its own natural self-colouring about it.

Upon brackets round three sides of the northern court is a series, in red clay, by Tuscan artists, of no fewer than twenty-one busts; some ideal of the saints; the others, the portraitures of individuals most of whom, be it said, were seemingly not over-well favoured by nature with beauty and winning features. All these busts show they were done by masters' hands, and the secular ones with such a life-like truthfulness as to let us know that if the Florentines of that time, however intellectual, were not a handsome race, those men who fashioned their likenesses in clay did not stoop to flatter them, nor lower their noble art to adulation. The busts of holy personages exhibit rather a naturalistic than a lofty type of the outward beautiful.

While on the subject of busts, it might seem an ungracious omission were I not to bring to mind three very remarkable ones exhibited amid the Loan Collection, brought together in this Museum during the ever-to-be-remembered year 1862. One of these busts represented Lorenzo the Magnificent, and now belongs to Lord Taunton; the other two, the property of Mr. J. C. Robinson, give us the portraitures of the father and mother of the Emperor Charles V. The Medici bust I look upon as one of the two most remarkable ones the world, ancient and modern, ever saw. The other is that of Caracalla. This Roman emperor's frowning effigy shows us the man inside and out. Upon his brow the murderer's brand is furrowed, and in that dark scowl of his we seem to see him as he bent his head and listened to the screeches of his dying brother Geta as with his own hand he dealt him the last death-stab: aptly is Caracalla's bust called by some the last sigh of the arts. Though the mark of Cain is not upon the forehead of Lorenzo's, there is that in its face, its leering eyes, its determined mouth, that crooked sneering nose, which makes us think this head would be no unfitting frontispiece to an edition of Machiavelli's book, "Il Principe." In each of Mr. J. C. Robinson's two busts we discover much individuality and character—mild, elevated, prepossessing, but the features are a little idealized and nicely rounded. Though brought into this country from Belgium, I make no doubt these fine busts originally came from the south of Spain, where for some time there existed a splendid school of art, many chief masters of which wrought, and wrought admirably, in burned clay; and such works are little or nothing known to Englishmen.

Arranged upon the sides of four large square stands, somewhat in the middle of this court, are, along with one valuable bust of a friar, several fine examples of whole though small figures, as well as subjects in low relief, almost all of a sacred character; and one of them—a monk at his studies—a most remarkable and very precious work.

To those recesses on the north of this court must we go, however, to behold some among the most daring and instructive productions of high art, left us by the great old masters in burned clay.

One of the earliest to work in clay of any sort, spoken of by Vasari, is Jacopo della Quercia, so called from the name of his birthplace, in the neighbourhood of Sienna, A.D. 1374. Telling of this sculptor, he says:—"The Sienese, deeply lamenting the death of their captain (Giovanni d'Azzo Ubaldini), they honoured him with a most superb and solemn funeral: they caused an edifice of woodwork to be constructed in the form of a pyramid, on the summit of which was placed a statue of Giovanni on horseback, larger than life. This work displayed considerable judgment, as well as fertility of invention, Jacopo having discovered a method of proceeding which had not been before in use. He formed the skeleton and body of the horse from pieces of wood and small planks, which were afterwards swathed and wrapped with hay, tow, and hemp, being well bound and secured with ropes, when all was covered with clay mixed with cement, formed of paste, glue, and the shearings of woollen cloth, &c." (Lives, i. 313). Though but sun-dried and unburnt, such was, from its lightness and the ease with which it could be wrought, the success of this group upon the top of what, in Medieval England, was of common use, and called a hearse, that, in all likelihood, it led Jacopo, and others after him, to employ for statues of all sorts clay made stronger and more lasting, though not more heavy, by being fired.

Hanging low enough to be well seen, upon the western wall, and numbered 7,613, we have, by the hand of this same Jacopo, one of the most precious art-works of the kind anywhere, telling us several things, and so many ways in which this sort of burned clay may be decoratively employed: this is a chest-front figured with the fall of our first parents, in three eight-sided panels let into a wooden frame, once richly gilt and elaborately ornamented with raised work.

Such trunks—to one of which this was once the front, as we perceive by the keyhole on it—were, in bygone times, important pieces of decorative furniture in great houses, all through Italy. Seemingly made for no other purpose than to carry to the young and noble bride, in her new home, her costly dresses and the presents given her by her friends upon her marriage, these chests were really meant to be abiding ornaments to the palace, and hoarded as the tokens of so many splendid alliances in the family. Often, therefore, were they blazoned with armorial shields, and had bestowed upon them the artistic beauty befitting such an article of furniture. Every one who has heard sung the "Mistletoe Bough," or read the poems of Rogers, will, on seeing one of these chests, bring to mind the sad story of poor Ginevra.

The once richly-gilt frame of wood, with its ornamentation in raised work, asks for our first attention, affording, as it does, a good example of a method very widely followed in the Middle Ages, here in England as well as Italy.

In his "Life of Margaritone" (1236—1313), Vasari says:—He appears to have been the first who considered the precautions required by him who paints on wood, to the end that the joinings should hold firmly, and that no clefts and fissures should become apparent after the completion of the painting. It was his custom to cover the whole surface with canvas, which he secured by means of a strong glue, made from the boiled shreds of parchment. Over this canvas he next applied a layer of gypsum,—on the gypsum, which was mixed with glue above described, he then formed diadems and other ornaments in relief. He was also the inventor of grounding in bolarmoniac whereon he laid leaf-gold, which he discovered the means of fixing and burnishing, &c. (Lives, i. 91.) Read as applicable to the frame before us, these words give an exact description of its decoration. But while later Italian writers justly disallow Margaritone's claim to the invention of this process, we, in our turn, may with truth assert that the method was known and followed here in England long before the end of the thirteenth century; and examples of one part of it—the raised work gilt and burnished—may be found, though of course in a very much smaller form, but after the same fashion, in plenty, among the MSS. written and illuminated by English hands many years before that time.

This wooden chest-front is divided into five compartments, of which two, one at each end, are narrow, with shields—the armorial bearings all gone—the other three, eight-sided, filled in with reliefs done in red burned clay, glazed. In the first of these three panels, we see the Almighty upbraiding Adam and Eve (Gen. iii.) for eating the forbidden fruit; in the second, an angel is driving forth Adam and Eve from Paradise; in the third, we have Adam leaning on a long hoe or mattock as he stands before Eve, who is seated on a rock and spinning from a distaff. That no hand but that of a very able master could have wrought the figures in these three compartments, must be clear to every one. The well-draped personage of the Almighty, with His upraised hand in mild threatenings, is full of majesty; and on the down-bent countenance of Adam, face to face with his Maker, sorrow is well expressed; though on earth, the angel scarcely seems to tread the ground, as he is casting our first parents out from the garden. But the head of Adam, taken evidently from the same model, is too much like that of the Almighty, while Eve's bears too great a resemblance to that of the angel. The perspective, especially in the limbs of Adam as he stands in the middle panel, is too receding; yet, altogether, in the style there is a something approaching the grand which makes this chest-front a very precious object.

Close by, we have a Crucifixion (5,786), with a crowd of people at Calvary; and among them a man on horseback, with the usual foreshortening of the horse's haunches, admirably executed: whether by Lorenzo Ghiberti or not, this fine work, in high and bold relief, is a valuable acquisition, and a beautiful example of good grouping and broad effective drapery: the red burned clay in which this splendid specimen is wrought, displays great smoothness in its treatment. Besides its art-worth, this fine piece of burned clay ought to have a peculiar interest for the student of symbolism and the hagiologist, who will see, at the top of the cross, a nest with the father-bird overhanging it, and with his bill ripping up his breast to bring to life his dead young ones slain by a serpent's bite, as he sprinkles them with his own warm heart-blood. This is the pelican in its piety, as it is called. Set forth here in its first and obvious meaning, this emblem tells us of the great atonement made by our Lord at Calvary, where He poured out His life-blood on the cross for fallen man's redemption.

Another admirable work (7,593) in the same material, is the small piece figured, in rather high relief, with the birth—a common subject among the Florentines—of St. John the Baptist (Luke i.). So wide, however, is the difference, in the style, between this and the Crucifixion just noticed, that they cannot be either of the same period, or the same master.

As a work struck off with wonderful ability, though, as it would seem, in great haste, and as a sketch for something of larger size, 7,619 ought not to be passed by, notwithstanding it be rough in very low relief, without a careful examination of those crowds of men and women quickened with strong, deep feelings of sorrow, the while, in one compartment, they look upon the scourging, within a vast architectural hall, of our Lord; in the other they are gathered about Calvary to witness, in wildest grief, His crucifixion. Done, as is evident, for some high personage, the artist has represented, after a somewhat classic manner, his patron's bust upon the sort of dado which serves as a basement to the whole of this double composition, as well as a shield of armorial bearings, of which the tints are unknown

though a fess, charged with three stars of six points, is discernible.

Though barely one foot and a half high, and less than that in width, No. 7,610, the likenesss of a monk, or perhaps a friar, seated at his studies and writing, has so many elements of the grand and majestic about it that, small in size as it is, it may be looked upon as one among the greatest works of its kind that have been wrought in burned clay, marble, or anything else. The inmate of the closter is there with well imagined head; the cast of features, far from being stern, has softened manliness; the brow is furrowed, the cheek haggard, not with age, but thoughtfulness, often watchings, fasting, and self-denial; the deep-set eyes, so keen, so quick, are all in earnest on their work, as if they had that moment caught the passage they had sought for in the open book, perhaps, of Holy Writ, which they are scanning; the hand so gracefully outstretched, with its slight, tapering fingers, is strong and sinewy withal. Hardly anywhere could we find better, broader, more majestic folds of drapery than those which his full flowing habit takes as it falls around his person. Head and hand—all the thinking man, seems quickened with one feeling—the highness of his hallowed occupation. Taken altogether, nothing that has come to us from the happiest times of Grecian sculpture can go before this little piece, in fitness, grace, and dignity.

From considering these few among the many works in high and low relief, let us go and view other burned clays of a more daring character, holding as they do a place in the loftiest class of statuary, that is, of groups done in the round. Of these, the first to which I want to draw your attention is No. 7,573, a group of the B. V. Mary sitting, with our Lord, as a naked baby, sleeping on her knee. It is ascribed, perhaps rightly so, to Jacopo della Quercia. Had this group represented a heathen woman with her boy, and been dug up in Athens, or found amid the ruins of old Rome, or in Adrian's villa at Tivoli, the classic world would have rung with its praises, and casts from it be set up in every museum, so admirably conceived and executed are both the figures. The virgin-mother is looking down, as much in worship as in love, upon that sweet son of hers, slumbering within her lap so fast asleep, asleep not only in eyes, but in hands, in feet, asleep all over His body, that is modelled so round, so soft. Though not thoroughly ideal in its forms, this admirable group shows a beginning of the Greek principle of choosing the finer shapes of nature found amid several individuals, and putting them in one, to give us human nature, not as it is, but as it might be, with more and greater beauties of the outward person about it than may be usually met united in the one same man or woman.

From a mere artistic point of view, the stark naked infant Lord may be scientifically and exquisitely modelled and so far admirable; but an inborn sense of the reverent and becoming, as well as seemly, whispers that, as in mediæval times, the body of our Lord as a babe should be somewhat clothed. An able artist needs not tax his invention very highly to find out the way for making a child beautiful in all its most beautiful parts and members, its head and face, its hands and feet, and yet know how, without hiding its limbs, to swathe its body in those garments with which, as the Gospel tells us, Luke ii., our Lord's blessed mother immediately wrapped Him at His birth before the shepherds came to find Him in the crib.

Quite near this fine work of Jacopo della Quercia, in the case behind it, is number 7,358, consisting of a group of four figures, almost life-size, that represent what in olden times we English used to call "Our Lady of Pity." In the centre is seated the Blessed Virgin Mary, bending over our Lord just taken down dead from the cross, and lying, full length, on His weeping mother's lap; to the right is, kneeling, the beloved disciple, St. John; upon the left side of our Lord, St. Mary Magdalen. To my thinking, this valuable work is, by a whole hundred years, older than the date given it; and instead of belonging to the seventeenth century, it was done very early in the sixteenth. Though there is very little or no attempt at the beautiful in these personages, and we be rather struck with the high cheek-bones, the rather over-bushiness in the head of hair upon St. John—a somewhat common Florentine fancy—a slight liking for the hard and sharp in the lines of the countenances, the too stiff position of our Lord, the want of pyramidal position in the figures, and consequent row of three heads almost on the same straight level; still, notwithstanding all these defects, there is so much deep, keen, heart-felt, dignified sorrow on the countenances, and so nicely and touchingly graduated too, with the strongest touch of all shown upon the down-bent face of the weeping mother, that the feelings of the spectator must be deeply stirred.

But, for our present purpose of seeking how burned clay may be made available as an object of decorative art, the teachings to be gathered from this group are very important. The figure of the B. Virgin Mary and that of our Lord, as far down as the end of the bust, seem to have been fired together; but each leg and thigh all in one piece—apart, and afterwards joined on to His body. So very smoothly has the clay been wrought, that the surface of all the figures has taken a glossy look: if this is in reality owing to a glaze, it must have been put on so slightly as to hinder that sparkle and glittering which, when the glaze is too bright, will hurt the eye.

After a narrow look at these burned clays, we find from the streaks yet remaining on a few of them that at one time or another some have been gilt, others coloured. In the instance of Lord Taunton's large bust of Lorenzo de' Medici, the colours were not, as in the ordinary practice, left to dry by themselves, but fixed in by fire. Not, however, having in them, nor put on them afterwards, any glaze, those colours look, as they must have always looked, dull, dirty, dusky. Bearing in mind that a glazing over clay which in its plain self is not a bad one, is about the worst grounding to be found for gold, there cannot be a doubt but that the beautiful chest-front was meant by Jacopo to stand in its first plain glazed condition; and therefore the gilding, some traces of which remaining on it, may still be found, was given it years, nay, a century, after its first owners had passed away.

This mention of colour brings us to the second subject of this lecture, the so-called Della Robbia Ware.*

* To be continued.

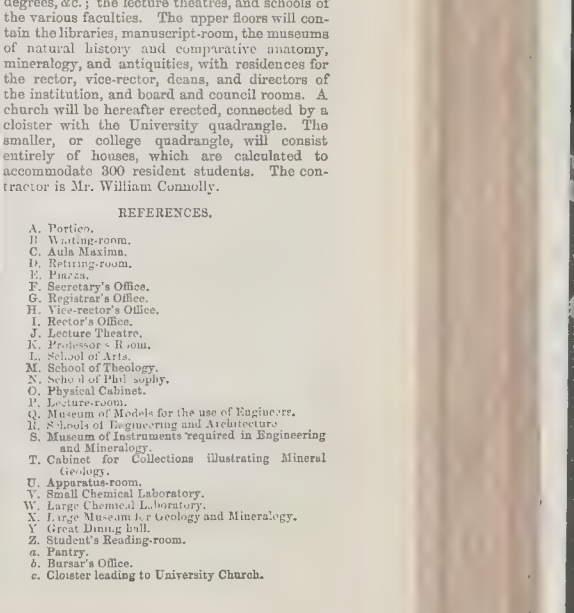
COURT NEWS.

THE BRUNSWICK SQUARE DISTRICT.

Gaspings for fresh air, cries for aid, and lamentations over evil conditions reach us from various quarters. We aid where we can. From the district of the Squares, for example, comes this humble plaint:

"We should be extremely obliged to you, Sir, if you would visit this place and see how we are treated by the sanitary officers of this parish. We are labouring men in the building line, and we have no one to appeal to but you. The dust has not been removed from before our windows for more than twelve months; and we look to you for redress. The spot we point to is Compton-place, Compton-street, Brunswick-square."

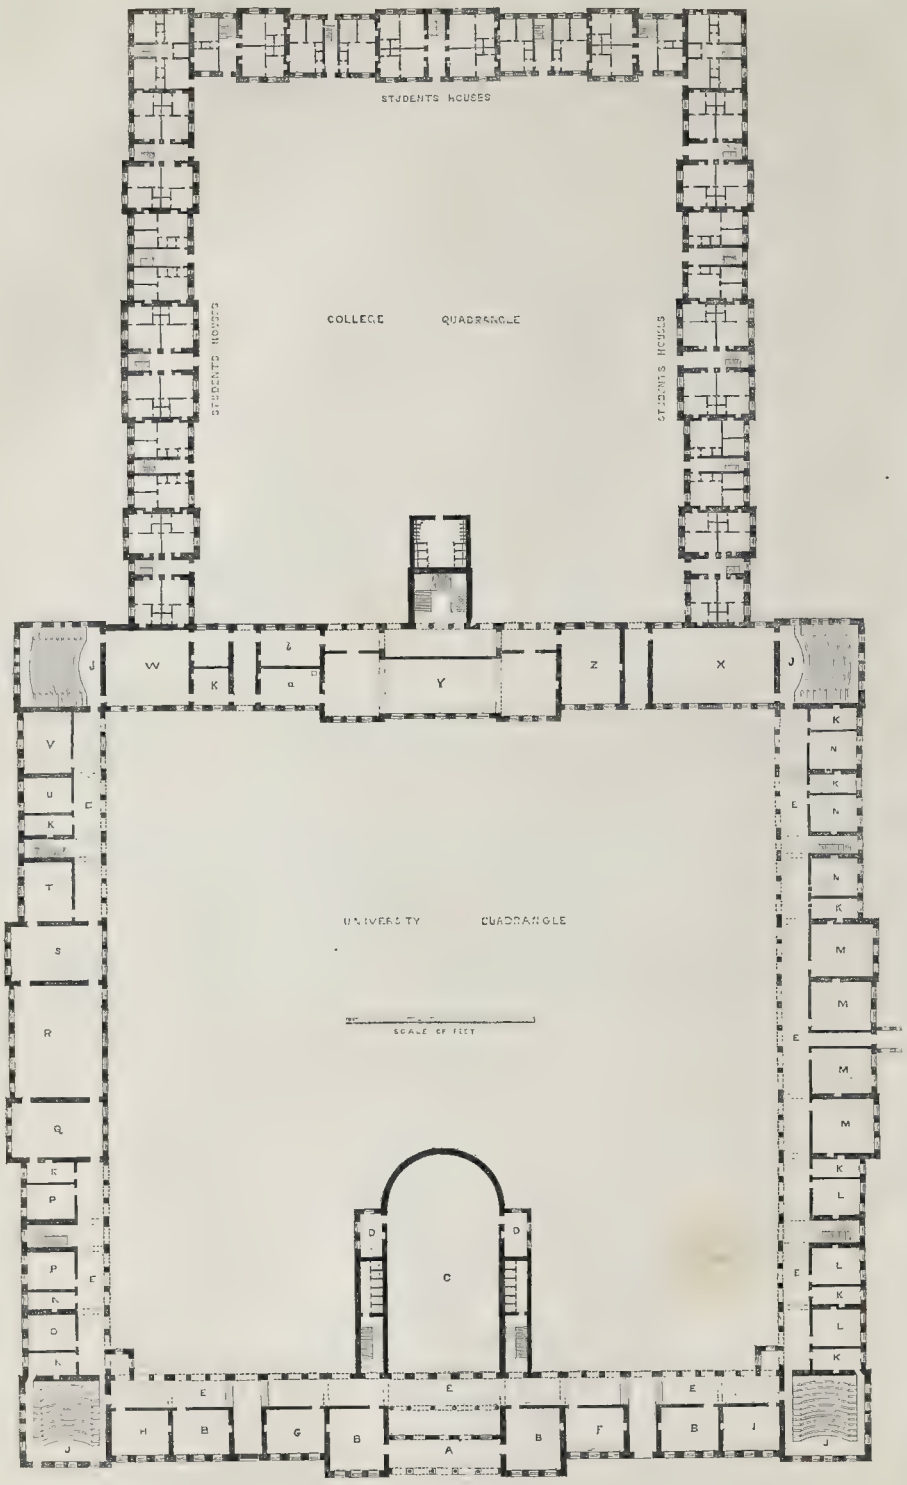
Between Burton-crescent on the north, and Guildford-street on the south, Woburn-place, west, and Brunswick-square, east, there are seven blocks of good houses fronting good streets, each block enclosing and hiding from view courts and mews. Of the evils of some of these, such as the Colonnade-mews, behind Bernard-street, we have before now spoken. Good men have been at work in the district since then, and it is quite possible that some improvements have been effected; indeed, we expect that this is the case. Our present business is with only one of them, namely, Compton-place, where, after the appeal we have printed, we went as a matter of course. The statement made was more than justified. Compton-place is one of a congeries of courts, opening out of Compton-street and into Hunter-street, with a police-station handy. Against a dead wall, in one part of the court, we found an enormous heap of "dust," vegetables, and other decomposing matter, including dead cats and dogs, leaving little room to doubt the assertion of our poor correspondents, that it had been accumulating there for months: indeed, unless the spot be the dust-heap of the neighbourhood beyond the precincts of the court, it is difficult to understand how the mass could have been produced. The smell was sickening: what this will be when the heap is dug into for removal is one of those things more easily imagined than described. Surely it only needs that this evil should be brought under the notice of the parish authorities to ensure a remedy, and to prevent a repetition of it. They must go farther, however, than this. In the centre of the court is a large grated gully-hole, apparently untrapped, and from it issues a filthy reek (we speak on the evidence of our own senses), poisoning the pure air, and unfitting it to sustain healthy life. At the time of our visit, the middle of a day, we counted more than ninety little children in this and the adjacent court; and a dozen of them were clustered around the very gully-hole in question. The injury such a vent as this must do, constantly pouring out deleterious fumes, is enormous, and calls at once for a remedy.



THE SHEFFIELD INUNDATION.

The report of the committee appointed by the Sheffield Council to watch over the Bill of the Sheffield Water-works Company, in Parliament, has been printed, together with the evidence of various civil engineers as to the design and construction of the Dale Dyke embankment and the causes of its failure. From this evidence, which comprises that of Sir John Rennie, Mr. Vignoles, Mr. Barlow, Mr. H. Conybeare, Mr. James Leslie, Mr. William Lee, and others, it appears that both in design and construction, as well as supervision, and even site, the embankment was defective; and the evidence, as a whole, corroborates the views taken in the *Builder* at the time. To the report is also appended the section of a proposed new site for the embankment. As a specimen of the evidence, we may quote a few lines from that of Sir John Rennie, who said,—

"On a retrospect of my evidence, and of the whole subject, I am of opinion that the large springs in the puddle-trench were one of the principal causes of the failure of the Bradfield or Dale Dyke reservoir. I do not consider that there has been evinced, in the construction of the works of the Sheffield Water-works Company, that degree of engineering skill which their importance and magnitude demanded. I think that the failure of the Dale Dyke reservoir and the similar construction of the Agden reservoir, now in progress, clearly establish such want of skill; and that the Corporation have just reason to doubt the safety of the other reservoirs."



ROMAN CATHOLIC UNIVERSITY OF IRELAND.

The accompanying view and plan will serve to illustrate the new Roman Catholic University of Ireland, intended to be erected on the lands of Clonliffe, near Dublin, from the designs of Mr. J. J. McCarthy, R. H. A., architect, and professor of architecture in the University. The buildings will consist of two large quadrangles, the greater of which, called the University quadrangle, will contain, on the ground-floor, the principal entrance, the *aula maxima* for the public exhibitions, examinations, conferring of degrees, &c.; the lecture theatres, and schools of the various faculties. The upper floors will contain the libraries, manuscript-room, the museums of natural history and comparative anatomy, mineralogy, and antiquities, with residences for the rector, vice-rector, deans, and directors of the institution, and board and council rooms. A church will be hereafter erected, connected by a cloister with the University quadrangle. The smaller, or college quadrangle, will consist entirely of houses, which are calculated to accommodate 300 resident students. The contractor is Mr. William Connolly.

ROMAN CATHOLIC UNIVERSITY OF IRELAND.—*Plan of Principal Floor.*

PROPOSED ROMAN CATHOLIC UNIVERSITY OF IRELAND, CLONLIFE, NEAR DUBLIN.—Mr. J. J. McCarthy, Architect.

MIDDLESEX ANTIQUITIES.

On Tuesday, the 9th, the members of the London and Middlesex Archæological Society, to the number of about fifty, under the presidency of Mr. John Tyssen, F.S.A., chairman of the Society, made an excursion to Hayes, and spent an agreeable day in examining the churches in the neighbourhood. The first place visited was Hayes Church, the peculiarities of which were pointed out. The party proceeded next to Harlington, where Mr. White described the church and its monuments. This church has a fine Norman doorway on the south side, which has been recently embellished with a liberal coating of whitewash. An attempt was made, it was said, some short time since, to clean this door, but the result was so unsatisfactory that it was not persevered in, and the whitewash was applied to conceal the defects laid bare by the operation. The stonework, however, appears to be very well preserved; the carved heads and mouldings looking very clear and sharp even under their fresh coating, and there seems no reason why the removal of the wash should not be again essayed under proper superintendence. It may perhaps be sufficient to direct the attention of the De Salis family (who have a residence near) to this doorway as an object deserving their care and liberality, and offering an opportunity of partly atoning for the injury done to the church by the displacement of a very interesting fourteenth-century altar-tomb, which is now raised some 6 ft. from the ground, and stuck in front of a window in the chancel, blocking out the light; to which most improper and ridiculous position it was transferred some five years since, to make room for a monument to a Countess de Salis, which occupies the whole depth of the altar from the east wall to the altar railing. There is a stained glass window on the south side of the chancel, in memory of a young Count de Salis; but this, as well as the monument just referred to, has very little ecclesiastical spirit, and is quite out of keeping with the character of the building in which it is placed. A pleasant drive brought the party to Cranford Church, charmingly situate in the park belonging to Lord Berkeley. Here is a tablet to the memory of Thomas Fuller, author of "England's Worthies," who is described as rector of the church; but it does not appear that he ever resided there for any time; and there is another, to Sir Charles Scarborough, physician to Charles I., who is briefly characterized in his epitaph as "Hypocrates in physic and a Euclid in mathematics." There is also an imposing monument to Sir Roger Ashton, who died in 1613, and is represented life-size, kneeling, with his two wives and four daughters. This monument has been very much shaken by the explosion of a powder-mill, about three miles off; and although it has been clumsily repaired, is in a very insecure condition.

The last church visited was that of Heston, which brought the day to a very agreeable termination. Heston Church is rather larger than the others that had come under observation, having two aisles and a chancel arch,—features wanting in the other churches examined, as well as well-defined specimens of styles from Norman to Perpendicular. It is much to be regretted that it is proposed to rebuild this church, in consequence, as is alleged, of its being ruinous and insufficient to accommodate the present congregation. The danger is imminent, the drawings and specification having been already prepared, and as much as 4,000*l.* collected for the purpose of the rebuilding; and it behoves everybody interested in our antiquities to do all that is possible to prevent the destruction of this interesting historical monument. The excuse that the church is insecure is too absurd to be persisted in: it is actually a Norman church peeled down, and a single glance at it is sufficient to show its strength and stability. The roof timbers may probably want repair, or possibly a new roof may be necessary, but this need not involve the entire destruction of the church. The plea that it is too small is equally untenable, as it might be easily enlarged by the addition of an aisle to meet the wants of the congregation; but the fact is, that the church is encumbered with high-backed pews, which, if removed, and a judicious system of open benches introduced, would very considerably increase the accommodation. It is not long since that it was proposed to cart away the lych gate at the entrance to the churchyard, in consequence of the decay of a few of the timbers. It was, however, happily preserved through the timely remonstrance of a member of the London and Middlesex Archæological Society. A few pounds preserved the gate from destruction, and it is now in a remarkably good condition, and looks as if it would last for centuries. Let the zealous vicar and his supporters turn their attention to the embellishment and preservation of their interesting old church, and they will earn the good-will of every one interested in architecture and archæology; while, if they persist in their scheme of demolition, they will associate themselves with an act of vandalism quite unparalleled in these last days.

The antiquities of Heston Church were pointed out by Mr Alfred Heales; and an interesting account of a *camera* or farm of the Knights Hospitallers, at Moor Hall, Harefield, was given by the Rev. Thomas Hugo and Mr. Charles Baily.

"A CORNER OF KENT."*

Mr. Planché is not the only man who, thoroughly in love with the subject on which he is treating, has found what he thought would be a small book, a mere waif and stray on the waters of literature, grow before his eyes into a great book. But we must exempt the work before us from the sweeping censure which condemns all "great books" as "great evils;" for in it Mr. Planché has really made a valuable contribution to topographical literature, and, by treating of the antiquities of a single parish, has shown what rich stores of materials for local history still lie buried in our musty parish records and manor-rolls, and has set an example which, if generally followed by the clergyman or squire, or some educated individual in our rural parishes, would gather together a store of most valuable information for our county histories,—a branch of literature in which, in spite of all that has been compiled by our Streatfields, Morants, Bloomfields, Hasteds, and Brittons, we are still most lamentably deficient.

Mr. Planché, however, it must be owned, has been fortunate in the parish the past history of which it has fallen to his lot to exhume. It is not every parish in the kingdom that can boast, like Ash, that Saxon and English kings, and Roman emperors before them, have used it as a place of embarkation and debarkation; that the ruined castle which stands within its limits was probably built by Vespasian, and tenanted from time to time by a Titus, a Severus, and a Constantine; or that a saint of such note as Augustine landed on its shores, and there unfolded the knowledge of the truths of the Christian faith to the heathen sovereign Ethelbert. It is strange that, after the lapse of more than twelve centuries and a half, the local tradition of Richborough should have preserved a record of the very spot where the king and the saint met in solemn state; but so strong are the corroborations of the story, that it requires a stronger faith to reject it than to admit it.

Every one who has visited the east of Kent is no doubt aware that what is still called the Isle of Thanet was once really an island, separated from the main land, not as now, by a small stream like the Stour, which is navigable only for barges, but by an arm of the sea, through which the Roman galleys sailed on their way up the Thames to London, instead of weathering the stormy promontory of the North Foreland. The Castle of Richborough stood on the south side of this channel, commanding its entrance, and nearly 2,000 years ago, bore the name of Ritupis, or Ritupium, or Portus Rutupinus. That it was celebrated for its oysters we know from Juvenal, who speaks of

> —— "Rutupino edita fundo
> Ostrea."

and our readers may be interested by hearing that very recently, on making the necessary excavations for the railway between Minster and Sandwich, which winds under the walls of the castle, a large mass of oyster-shells was discovered which no doubt had lain *in situ* from a day anterior to the time when the Romans withdrew their legions from Britain, and their once victorious eagles flapped their wings and flew away.

The ruins of Richborough Castle have been often described before; but no one, we think, has treated the subject more satisfactorily than Mr. Planché, who is of opinion that nearly the whole of the basin which lies between Richborough and the town of Sandwich was once covered by houses inhabited by a Roman military population, and that this was the Rutupium to which ancient writers refer when they speak of that town conjointly with Londinium (London) and Dorovernum (Canterbury). We think that his arguments are conclusive against the identity of Sandwich itself with this Rutupium; though, no doubt, as the sea receded and left the old port high and dry, the port of Sandwich superseded the "Portus Rutupinus," and accordingly came to take rank among the Cinque Ports. He also shows that, like the Roman fortress at Burgh, on the Norfolk Coast, the walls of Richborough Castle extended along only the northern, western, and southern sides of the quadrangle; the fourth, or eastern side, being sufficiently defended from assault by the comparatively high cliff on which it stood, as well as by the sea which flowed immediately at its base, and the Roman galleys riding proudly at anchor in the deep waters of the port, or scouring the offing in search of the enemy. Some writers, indeed, have gone so far as to assert for Richborough the honour of being the place where Julius Cæsar first landed on the shores of Britain; but Mr. Planché dismisses the supposition as scarcely probable, placing against a mere unauthenticated tradition, the fact of our utter ignorance of the many changes which the coast-line of Kent has undergone during the last nineteen hundred years.

He says on this subject:—

"The frowning masses of masonry which have resisted the assaults of time, tempest, and man for eighteen centuries, are, after all, the great fact which is more valuable than a thousand theories. Whether a British fort, raised by a chief who has been called Arviragus, originally occupied the site of the *castrum*, may never be ascertainable; but that the walls still existing were reared by the masters of the ancient world; that through that nearly perfect postern gate Roman emperors have entered and departed; that the shouts of joyous multitudes mingled with reverential cries of 'Ave, Cæsar Imperator!' have arisen from that amphitheatre over which the corn now waves or the plough now passes, is as well known to us as if it were recorded in the pages of Tacitus.

Vespasian may not have built the castle; but as an officer serving in the army of Aulus Plautus, he must have entered the natural harbour it afterwards commanded. Claudius came over to Britain to partake the triumph of his general, took Maiden, in Essex, the Camalodunum of the Romans, and the capital of Cunobellin, remained sixteen days in the island, and returned to Rome, leaving Plautus to govern Britain. Titus, the future conqueror of Jerusalem, came hither as military tribune under his father Vespasian. Agricola with, possibly, Tacitus in his train, for there are expressions in his graphic account of the expedition that would justify our believing he was an eye-witness of some of the events he records; Hadrian; Severus, who is presumed to have completed the defences of Richborough, and died at York; Constantius, who also expired in Britain; his son, Constantine the Great, who was raised to the purple in this country; and Maximus, the competitor of Gratian, a Briton by birth, according to some historians, and who is stigmatized by Ausonius as 'the Robber of Rutupis,'—must all have passed through the water-gate of Rutupium, the common port of communication with Gaul. One still greater than emperor, general, or historian, is presumed to have landed at Richborough. There is a vague tradition that Christianity was first preached in Britain by St. Paul, the Apostle of the Gentiles, and much learning has been wasted in vain attempts to establish the fact. We must, however, be first satisfied that he, like those we have already named, actually *did* visit these shores, before we speculate on the place of his landing. Amongst the holy and canonized men who in these early ages must have seen Richborough in its glory, we may mention St. Germanus, Bishop of Auxerre, who twice encountered the perils of the ocean to combat the Pelagian heresy in Britain, narrowly escaping on his second voyage, in company with Lupus of Troyes, the fearful tempests raised, as the Venerable Bede assures us, 'by the malevolence of demons, who were jealous that such men should be sent to bring back the Britons to the faith.'"

Mr. Planché comments on the passage above quoted as follows:—

"With such materials for our fancy to work upon, we may stand upon that now deserted highland, and rebuild, in imagination, that celebrated fortress. We may still picture to ourselves 'the Channel fleet' of that period at anchor in the placid waters which then reflected its proud battlements, or seeking, by the light of its lofty Pharos, a refuge in that 'tranquil haven' from the dark and turbulent ocean without. Turning to the north, we may descry the Belgic Briton, in his wicker coracle, paddling over to the Isle of Thanet, divided from the mainland by the sea, at that point nearly a mile in breadth, and studded with trading vessels from Gaul, Greece, or Phœnicia. Or, looking westward, see the colonial city covering the slope of the hill; its busy streets, of which the tracks were visible in the reign of Elizabeth; the forum thronged by its mixed population, foreign merchants, curious travellers, idle mariners, and all the motley crowd that congregate in a thriving commercial seaport town. The temple of Æsculapius, the palace of the Prefect Sanctus, the villa of the opulent Contentus, of which, perhaps, that broken tile at our feet may be the last remaining relic. The reader may smile; but there is no exaggeration in the picture. There can be no doubt that such were the general features of the scene which once presented itself to the sight on this spot, and the probability is that our slight sketch is rather under than over-coloured. Even after the final departure of the Romans, Rutupia retained its importance for centuries, both as a mart and a haven. Vessels from the west found a safer and shorter passage to the mouth of the Thames by passing through the estuary, and the large quantities of *æramini* to which we have already alluded, as well as of Saxon coins which have been discovered here, from those

* "A Corner of Kent; or, Some Account of the Parish of Ash-next-Sandwich, its Historical Sites, and Existing Antiquities." By J. R. Planché, Rouge Croix Pursuivant. Hardwicke, 1864.

of the earliest description called *Sceattas*, down to some of the ninth century, prove the continuous occupation of the site to that period."

Mr. Planché next traces the history of Richborough through the Saxon era, when it appears to have been the head quarters of the navy; and he also claims for it the honour of having been the place where Hengist and Horsa, the Jutish chieftains, first touched our coasts, soon after which date Richborough became a royal residence, "its Roman name of Rutupis being transmuted," says Mr. Planché, "into Reptaceaster, and occasionally into Ricsburg, or the *King's Castle*, whence its modern appellation." If Mr. Planché means by this allusion to hint at a derivation from the Latin "Rex," we venture, with due submission, to suggest, that it is far more probable that the word "Ricsburg" came from Eric the son, or at all events the successor, of Hengist.

Mr. Planché has adorned his book with illustrations of the parish church, of the armorial bearings upon the tombs, and of the antiquities found within the limits of the parish. The engraving opposite to page 24, includes two very interesting specimens of Roman art, a fibula of silver gilt and bronze, and a buckle of girdle or sword-belt, of silver gilt with gold borders, which were dug up at Guilton, in Ash; as well as the hilt of a broadsword and a horse's bit, both of the Anglo-Saxon period. The latter has appended to it, by way of ornament, a Roman coin of the date of the Emperor Claudius. These remains alone, as Mr. Planché remarks, would go far to prove, if proof were needed, that a large and wealthy community lived and died in the immediate vicinity of Richborough, long previous to the conversion of the ancestors of the men of Kent to Christianity.

The monuments in the church are treated with the minute consideration which they deserve by Mr. Planché, who, aided by his extensive and scientific knowledge of Mediæval costume, has been enabled to throw considerable light on the descent of the twelve manors comprised within the limits of the parish, and on the pedigrees of several very important historic families, including the Levericks, Goshalls, Keriels, Cutherows, Septvans, Harflets, Tolderveys, and many others whose names have long slipped away into oblivion, and whose estates have passed into other hands by bequest, or by that great stumbling-block of antiquaries, the marriage of heiresses.

THE DUNDEE ALBERT INSTITUTE.

Mr. Gilbert Scott's designs for the Albert Institute at Dundee are now being exhibited to the public in the Royal Exchange Hall there. They have been unanimously approved of by the committee. Along with the plans a letter was forwarded by Mr. Scott, in which he says:—"The key-note of the design is the idea which was struck out when I met the committee, of making a great hall which will serve alike for public meetings, concerts, lectures, and for the principal portion of the library. This great hall is common to the two divisions of the Institution, though approached by the members of either by distinct entrances and staircases. On the ground floor the two divisions are wholly distinct, though *capable* of being united; and on the upper floor the whole belongs to the higher class Institute, excepting the great hall, which is common to the two. I have shown a range of museum-rooms, with a picture-gallery above, but so placed as to be capable of omission or postponement. In style I have followed that of the best period of Pointed architecture, taking pains to give it such national characteristics as will render it distinctly Scottish in its general feeling. I fear that the cost, even omitting the museum and picture-gallery, will be in excess of your funds. Nor do I see my way to rendering it otherwise. The amount for this part of the building seems to come to about 14,000*l.* as the design now stands. This is judging from cubic contents."

The shape of the proposed building is that of a T, to which, if the museum and picture-gallery were added, the tail would be lengthened out. The head of the T is to the west, and the desire of the architect, remarks the *Warder* in describing it, has evidently been to make that side the point from which most effectively to view the design. The principal entrance is from the north-east corner of the building. On the north side, immediately to the east of the wing forming the one side of the top of the T, there will be a tower, octagonal to the outside, and round within, in which will be a stair leading to the great hall, and rooms above for the members of the Institute. The elevation to the west will also show a massive tower, which will be in the centre. On the first floor, occupying the whole west front of the building from north to south, will be the great hall. This will be the principal feature in the structure. The hall is proposed to be used jointly by the subscribers and non-subscribers of the Albert Institute. This hall, with the exception of the Corn Exchange, will be the largest in Dundee, being intended to be 90 ft. long by 40 ft. broad; and, to the wall head, from which the arch of the roof springs, the perpendicular height will be 22 ft., and to the summit 38 ft.

NORTH LONDON WORKING CLASSES INDUSTRIAL EXHIBITION.

This movement is progressing favourably. A public meeting for the St. Pancras district, and another at Pentonville, have been held in promotion of the objects contemplated. The Rev. Canon Champneys, rector of St. Pancras, occupied the chair at the St. Pancras meeting. Mr. Watts explained the nature of the exhibition, and that it would be opened at the Agricultural Hall in October, at a uniform charge for admission of 2d. Resolutions in accordance with the objects of the meeting were unanimously adopted, and a local committee was appointed to assist in carrying out the movement for St. Pancras. As the time for the opening of the exhibition is not far distant, we would impress upon our readers who dwell in North London that the following classes are invited to exhibit, free of charge, articles of skill, novelty, or ingenuity:—1st. Working men or women in the receipt of wages. 2nd. Small masters. 3rd. Large masters, giving also the names of the workmen engaged in producing the article. We trust that in connexion with this exhibition young workmen will be well represented in their various crafts. Many may have something already finished which they might show with credit; but it is not too late for many to begin some example of their handiwork, for there will probably be over six weeks' time yet allowed before the articles are to be sent in. Many of the young stonemasons, and the workers in wood, might at leisure hours produce some piece of statuary or ornamentation, which would not only be interesting in the exhibition, but also prove of future benefit to themselves; for many employers of labour of various kinds will be looking here for skilled assistance.

PAPER MATERIAL.

The present transition state of the paper trade is especially worthy of consideration; not only in consequence of the difficulty which there seems to be in meeting the constantly-increasing demands, but from the anxiety felt by many that a material should be found which will ensure a permanency to the literature of the present and coming generations. There is a fear that in the introduction of large quantities of vegetable fibre, a kind of paper will be brought into the market which will be less permanent than that which was used by the early printers; and that, a hundred years hence, fine examples of typography of the Victorian era may in vain be looked for. Although we do not share so much as many do in these fears, still it is very important that an inquiry should be made into this matter by competent authorities; for certainly when we look at the beautiful examples of printing by the German and English workmen of a little more than three centuries ago, it seems doubtful, at least, whether we have made any great advance. In the early examples, both the paper and the printing ink are permanent and of beautiful quality. The most early writings are on a vegetable substance, and some of them, after the lapse of thousands of years, are perfectly distinct. Then came the ages of skins, in turn succeeded by vegetable fabrics again; for it must not be forgotten that rags are of a vegetable nature; and when we think of the extraordinary demand which there is for this material, one can scarcely have a doubt but that by means of ingenuity and the right application of capital, we shall be able to provide materials which will answer not only for the common, but also the very best descriptions of printing.

There ought not, however, to be any doubt whatever on this point.

BRISTOL SOCIETY OF ARCHITECTS.

EXCURSION TO CHEPSTOW AND TINTERN.

The third excursion for the present session was to Chepstow and Tintern. The party consisted of Mr. S. C. Fripp, the vice-president of the society; Mr. C. J. Phipps, of Bath, the honorary secretary; Messrs. J. Bindon, J. A. Clark, T. S. Hack, J. Foster, H. Lloyd, H. Masters, T. Pope, A. C. Ponton, T. Cross, Merry, Clifford, Buidley, Barnes, Bussell, Hughes, Harvey, A. Hazeland, E. Hazeland, and Wetmore. The abbey ruins were visited; and Mr. J. Foster read to them a paper upon "Tintern and the Cistercians," which had been prepared by Mr. T. Pope and himself. The paper was illustrated with a ground-plan. After the reading of the paper the ruins were inspected, under the guidance of Mr. Pope and Mr. Foster. The discussion commenced with the consideration of the question as to whether the roof of the refectory was groined or otherwise. The former opinion was expressed in the paper, but the opinion of the members seemed to be divided, the majority thinking it was a wooden roof. Several of the party proceeded to the Wyndcliff, and after a pleasant trip the whole of the excursionists met at the castle, when "Remarks on Chepstow," illustrated by a grand plan of the castle, were read by Mr. Phipps.

The castle was afterwards minutely inspected, and the party then adjourned to the Beaufort Arms Hotel, and dined.

CHESTER TOWN HALL COMPETITION.

We have received letters at the moment of going to press from half a dozen of the competitors (Mr. T. M. Lockwood, Messrs. E. Godwin & Crisp, Mr. Douglas, and others), asserting distinctly that the design "Love's Labour," to which the first premium has been awarded, is not in accordance with the conditions issued. Some of them suggest an immediate conference of the competitors, with a view to joint action.

COMPETITIONS.

Hartlepool New Markets.—The committee selected the design marked "Nota Bene," and the Board of Health having adopted their recommendation, the author is announced to be Mr. Chas. J. Adams, architect, of Stockton-on-Tees. The design is to be carried out under his superintendence.

Sligo Town Hall.—Sir John Benson, as we have already announced, was called in to report on the designs submitted; and the premiums have been awarded as follows:—1. No. 2, "L'Homme propose," William Hague, Great Brunswick-street, Dublin; 2. No. 3, "Love's Labour," W. J. Barr, Belfast; 3. No. 19, Lanyon, Lynn, & Lanyon, 64, Upper Sackville-street, Dublin. The amount to be expended is 5,000*l.*

CONDITION OF BETHNAL GREEN.

The terrible state of this district, and the evil way in which the relief of the poor is managed,—a mischief often referred to in these pages,—are again forced on us. At the coroner's inquest respecting the death of Henry Nash, aged eight years, it was stated that there were eight members of this family, and the whole occupied one room. The rooms of these houses are of the very smallest size, and it is no matter of wonder that typhus fever broke out in this place (No. 15, Half Nichol-street). The father, John Nash, who was so ill that he could scarcely speak, said that he was a labourer, and used to earn 2*s.* 6*d.* a day; but he had been for a fortnight out of employ, and could not work. He had not applied to the parish as he hoped to get better. Three years ago he was in great distress, and applied for relief. At first they gave him one shilling a week and a loaf of bread—*this for the out-door relief of a large family*,—but even this miserable stipend was stopped, and the people were offered no further assistance unless they would enter the *House*. This they refused to do, and then the authorities would give nothing. On a night recently the deceased was taken with "squeaking convulsions," and was in great pain. He died the next morning. The dead boy had a share of what came into the house; but there was very little, on account of their poverty.

Dr. William Gayton said that he had made a *post-mortem* examination of the body of the

deceased, who was dreadfully emaciated. The lungs, stomach, and other important parts were in a healthy state (the child might have lived to an old age), but in the stomach there was only about an ounce of fluid gruel. The cause of death was convulsions produced from the want of food; and the medical witness doubted if the parents were yet sufficiently recovered to understand what was passing around them. Such a case as this,—and they are unfortunately to be found in hundreds in Bethnal-green,—clearly shows that no time should be lost in altering the present system of parish relief. The matters which are constantly coming before the public notice in connexion with this district are painful to all, and a shame to those who have the management of the poor. There is poverty in all the metropolitan parishes, but we do not hear in Islington, for instance, of persons being allowed to die of actual starvation. The verdict of the jury was,—"That the deceased, being of tender age, and in charge of his parents, died from the mortal effects of convulsions, caused by want of nourishment."

THE WOLF ROCK LIGHTHOUSE.

For many years past the imperative necessity of a lighthouse on the Wolf Rock, which is about seven miles south-west of Land's End, has been generally acknowledged, and about three years ago the Trinity Board resolved to erect one. Since that time the preparatory works have been carried on at Penzance, under the superintendence of Mr. W. Douglass, the resident engineer, and a large quantity of granite has been cut and fitted, ready to be sent out to the rock when required. A landing-place for materials had to be prepared. This preparatory work is now pretty nearly completed. The irregularities of the Wolf Rock have been hewn down with great labour until a solid base was found for the immense stones which form the foundation of the lighthouse. The base stone has just been laid, as it were by stealth, after waiting off Land's End for three days. The dimensions of the lighthouse are as follows:—The extreme height of the masonry of the tower, 116 ft. 6 in.; from the base to the centre of the light, 126 ft. 6 in.; the height of the light above high-water, spring tide, average tide, 110 ft.; the diameter of the base, 40 ft. 1⅞ in.; and the diameter of the upper part of the tower under the cornice, 17 ft.; the diameter of the gallery round the lantern, 21 ft. The whole tower is to be built solid 42 ft. above the base, and the upper portion is divided into seven rooms in addition to the lantern. The granite for the masonry of the upper walls and the external part of the base is from Messrs. Freeman's Carnsew Quarry, near Penryn. The granite for the internal part of the solid work is from Messrs. Freeman's New Mill Quarry, near Penzance. It is calculated that the light from the top of this new lighthouse will be visible on board the deck of a ship at a distance of fourteen miles, and at the masthead of a large ship at a much greater distance.

RECIPE FOR (PERHAPS) MAKING DIAMONDS.

It may be remembered by our readers that we lately suggested the possibility of making artificial diamonds, if a solvent of carbon could be discovered, which would lift and deposit it as alum is lifted or solved in water, and deposited in the crystalline form of alum baskets. Thereupon a correspondent suggested that failing the obtainment of such a solvent, perhaps electricity could be brought to bear upon a carbonaceous solution, so as to cause the carbon to be deposited pure in a crystalline form. The subject seems to have excited some attention; and a writer in the *Dublin University Magazine*, thus deals with it:—"Diamond when fused by the heat in the open air, leaves a residue of pure carbon. Its attraction for solar light is so great that, after absorption, it is sure to give it off when placed in a dark room. Its extreme refrangibility shows it to have for its base an oily substance. It is a bad conductor of electricity, like all such substances. Suppose we take a portion of pure carbon (which is a powerful conductor of electricity), produced by burning to sooty residue a quantity of vegetable oil, say oil of origanum, which is the most inflammable; then place it in a close air-tight vessel constructed so as to admit a saturating supply of oxygen (which is a powerful conductor of electricity); then bring to bear on this intensely oxygenised piece of carbon a strong and constant electric current. While the latter produces volatilisation and intense molecular aggregations, it is very possible that the union of oxygen with the carbon, under such conditions, would result in the re-construction of diamond substance, which would take a crystallized form under the influence of the current; while the oxygen would restore to the diamond base the quality which it had lost. The instrument should be exposed constantly in the light of the sun, which exercises such influence on crystallisation; and as the harder the crystal the longer the time it takes to form, the process of the experiment would of necessity be extended over several or many years." So, it may be some little time ere we can report the result of such an experiment as this.

GLOUCESTER CATHEDRAL.

Operations have been commenced in this cathedral for the purpose of warming it. The plan which will be pursued is that of the London Warming and Ventilating Company, which has already been applied to fourteen cathedrals. The plan adopted is said to be comparatively inexpensive. It consists of a series of stoves so arranged as to be little if any eye-sore to the building. They are of a peculiar construction, being cylinders with radiating flanges or wings, the whole stove standing in water, and causing evaporation sufficient to prevent the stove being overheated on the one hand, or the air being dry on the other. This system is now adopted in the Houses of Parliament. The whole of the interior of the cathedral is to be kept at one general temperature—50° to 55°. Thus draughts will be prevented, and comfort secured.

A memorial window to Dr. Luxmore, formerly Dean of Gloucester, has been erected in the east cloister of the cathedral. The whole of the stone work had been previously restored. The window consists of tiers of eight lights. In the lower tier is decorated glass with coloured borders. The next tier is occupied by eight pictures illustrating the texts "Suffer little children to come unto me and forbid them not, for of such is the kingdom of heaven," and "Whosoever shall receive one of such children in my name receiveth me, and whosoever shall receive me, receiveth not me but Him that sent me." The artists were Messrs. Ballantine & Son, of Edinburgh.

SALES OF PROPERTY.

At the Guildhall Coffee-house, by Messrs. Norton, Hoggart, & Trist:—Freehold estate, known as Brenley House, situate in the parishes of Boughton-under-Blean and Selling, Kent, comprising a house, farmhouse, farm buildings, &c., and 214a. 2r. 4p. of arable, hop, orchard, and meadow land—sold for 18,150*l.*; freehold, three enclosures of marsh land, situate in Sea Salter Level, Graveney, Kent, containing 35a.—2,500*l.*; freehold dwelling-house, being No. 31, Charles-street, Westminster, let at 60*l.* per annum—1,000*l.*; freehold shop and dwelling-house, being No. 39, Charles-street, Westminster, also in the rear a dwelling and premises, No. 12, Gardiner's-lane, producing 70*l.* per annum—1,500*l.*; freehold shop and dwelling-house, being No. 40, Charles-street aforesaid, let at 45*l.* per annum—800*l.*; freehold rental of 107*l.* per annum, arising from property situate in Charles-street and Gardiner's-lane, Westminster—2,500*l.*; freehold rental of 70*l.* per annum, arising from property situate in Charles-street and Gardiner's-lane, Westminster—1,500*l.*; freehold shop and dwelling-house, being No. 44, Charles-street, Westminster, let at 40*l.* per annum—840*l.*; freehold dwelling-house and shop, situate No. 22, Gardiner's-lane, aforesaid, let at 28*l.* per annum, 500*l.*; Leasehold residence, being No. 13, Hyde Park-street, Hyde Park-square, with coach-house and stable, let at 230*l.* per annum, term 96½ years from Lady-day, 1836, at a ground-rent of 3*l.* per annum, sold for 3,700*l.* At Garraway's, by Messrs. Farebrother, Clark, & Lye:—Leasehold residence, being No. 64, Addison-road, Kensington, let at 160*l.* per annum, term ninety-nine years, from June 24th, 1852, at a ground-rent of 15*l.* per annum—1,780*l.*; Leasehold residence, being No. 29, Pembridge-crescent, Bayswater, with premises in the rear, producing 80*l.* per annum, term 90½ years from Lady-day, 1854, at a ground-rent of 16*l.* per annum—960*l.*

THE ACHILLES STATUE.

Apropos of the neglected state of many of the timber trees in Hyde Park and Kensington Gardens, mentioned in last week's *Builder* (p. 602), I would invite your attention to the curious state of the inscription on the lower plinth of the Achilles Statue, opposite Apsley House, in Hyde Park. Some time ago a man was punished for stealing some of the bronze letters. Now, I think you will find, on inspection, that the whole of them on this lower plinth, describing the part which George IV. took in the erection of the memorial to the great Duke, have been removed. Public statues, by a recent Act, are under the safeguard of her Majesty's First Commissioner of Woods, Works, and Public Buildings. Does he intend to restore the missing letters? Now that the palisading is removed, a sunk ha-ha fence round this monument would prevent further damage. Q.

THE NELSON LIONS.

Most certainly the long-expected royal animals are not travelling to Trafalgar-square by an express train: on the contrary, they seem to have been put into a remarkably "slow coach." On my asking, the other day, when they were likely to arrive, the reply was,—"As soon as the lion on Northumberland House wags his tail to welcome them." Badinage apart, the most essential question of all is,—How far, when it shall have been completed, is the Nelson Monument likely to prove satisfactory in its *ensemble?* The column itself shows no attempt at special adaptation to a special purpose. A lofty pillar, intended to stand by itself, ought surely to be so differently proportioned from a column which, with its associates, is in a building firmly "pinned down," as to show, at the very first glance, that it *does* stand quite firmly; or, in other words, the expression of stability ought to be energetically pronounced by such expansion as to render the diameter of the base twice that of the upper extremity of the shaft; warranty for which departure from "ready cut-and-dry" orthodoxy may, if required, be found in the graceful heterodoxy of the Ionic columns in the temple at Bassæ. Though not absolutely required constructively, an exaggerated base would be a decided æsthetic propriety in a column destined to stand unwedded and alone, without even so much as a single sympathizing friend or companion. Here suppressing remarks that might be deemed not only satirical, but also quite out of place, I simply give it as my own private opinion, that to station a monumental statue on the giddy eminence of a lofty column is a far too literal mode of *exalting* the individual intended to be thereby honoured; because, so placed, almost anything in the shape of a man will do.* One susceptible instance, indeed, we have—one we ought to be proud of—of a statue being employed architecturally as an emphatic anthropomorphic finial to a campanile. Yet strange, or, if not strange, mortifying, to say, so far from being hailed as a happy idea, it has been sneered at as an absurdity by that puny *petit-maître* critic, Horace Walpole, and those who have taken their cue from him. Hardly is it necessary to explain that the example alluded to is St. George's, Bloomsbury.

Here resisting a strong temptation to indulge in enlarging greatly upon what I have just been saying, I restrict myself to the simple query,—What is likely to be the general result of the monument when completed? Is the pedestal to be the capital part of it?—far more attractive, probably, than all the rest, because, so introduced, and modelled by a master hand, the animals will be very far more than ordinary filling-up accessories; but considered only with regard to architectural effect, they will confer something of distinct character on this one of the many Nelson columns. Apart from the artistic value and interest of the sculpture, there cannot fail to be the highly-desirable expression of both expansion and finish below. Attention to the finishing up of extremities ought to be as fully impressed upon the architect as on the painter. For a hundred who can paint faces, there is scarcely one who can paint hands well in ungloved nudity.

We have heard of late a great deal about sky-line, and it would not be amiss were some one

* The tar who exclaimed, on visiting Trafalgar-square,—"By Jove, they have mast-headed the Admiral," did not feel the position, so usual in the punishment of naval culprits, to be one of honour to the admiral.—Ed.

now to insist upon the importance of "ground-line,"—by which term is to be understood the decided architectural expression that may be given to the *footing* of a building; a point which, important as it is, has hitherto been overlooked by those who take upon them to be our architectural teachers, but who, whether Classicists or Gothicists, never call attention duly to the æsthetic value of a boldly-pronounced basis.* ART-LOVER.

FERRY ACROSS SERPENTINE.

ADVISED by the notice in the *Builder* that boats plied across the water,—on my Sunday's stroll in the park, with some companions, I applied at the Humane Society's Receiving-house, but found the skiffs all moored, and the boatmen gone! Now, Sunday is the only opportunity we mechanics have for a walk, or an airing; and, whether it were to cross the lake only, or to indulge in a spell of rowing, surely, after church-time, it need not be thought profane to give us that indulgence.

Of late, the equipages of gentry have discontinued the drive, which was formerly *most thronged on the Sunday*; still, however, they circulate freely through other parts of town, and set down very many of the congregation at the church-door; and the domestic works of the most sanctified are not suspended; for even the Episcopacy do not adhere to cold repasts on Sundays.

Seeing, therefore, that Puritanism is not the taste of the time, and that the innocent indulgence of a taste for aquatics may co-exist with decorous conduct, I would beg to inquire through you, Mr. Editor, wherefore are we debarred the advantage of a free sail, scull, or ferry across the waters, which are now *more verdant* than the park?

As to the water which is forced up from the St. James's springs, that is tainted with Westminster sewage from its source,—and that which is drawn back and circulated from the Serpentine itself is but a *ditto repeated*,—so that it is only by circulation or disturbance of the water that the weeds are kept down in the lake below bridge.

A remission of restraints is found by liberal governments to be wiser and more conducive to good order, while it is also consistent with that true spirit of religion, "*the service whereof is perfect freedom.*" ARTISAN.

HOW TO VISIT THE ART EXHIBITION AT MALINES.

SIR,—Could not one of your subscribers arrange a plan and route whereby one, or a small party of art-workmen, might both profitably and economically visit the above-named exhibition? I should have much pleasure in making one of the party, which, I think, would be mutually advantageous, in being the means of extending one's scientific acquaintance, exchanging ideas, and calling each other's attention to many subjects which might otherwise escape an individual's attention. The time is fast approaching. ASPIRANT.

ST. LUKE'S CHURCHYARD, CHELSEA.

IN the very densely peopled district intermediate between the high Fulham and King's roads, the church stands in the centre of a 6-acre square. The plot is railed round, and on all sides flanked by houses. On the west is Robert-street, a wide thoroughfare, with private dwellings of a better order, confronting the church: on the north and south are two smaller streets; and on the east the backs of houses, amongst which is a large parochial school, look upon the graveyard, now of course discontinued as a place of interment. Thus there are about 100 houses, with full view over this Golgotha *petræa*.

About one-fourth part of the space at the north-east corner is open, and covered with green herbage: the rest is like the old intramural cemeteries, bristling with tombstones, set on end, and so thickly planted as to conceal each other, somewhat like a mason's stoneyard. On the outer bounds, close to the line of railings, ranges of forest trees of about twenty and thirty years' growth are planted; lindens on the north, elms on the south and west, and a funereal row of poplars on the east. The space from house to house is about 180 yards by 160 yards; therefore this fine opening, with a lofty church and tower in the centre, might be made an ornamental as well as healthful point of attraction to its populous neighbourhood.

There is, however, but one way of dealing with an old cemetery. *Lay the tombstones horizontal*, level and turf over the intervals, cutting walks in suitable directions, and then planting shrubs in groups or detached,—not to overdo it by forming thickets; but here and there an arbutus, a lilac, a laburnam, and all the varieties of shrub; but also the white and red thorn, and votive flowers, wherever the owners of the narrow freehold may feel disposed to pay that seasonable tribute to severed affections.

* The necessity has been treated of at some length in our pages.

Although the ground is closed for interments, and the legends are confined to the titles, names, and epitaphs of those who sleep under the tombs, there are some who might oppose the levelling system recommended. Ought they not, however, to yield to the majority of a parochial meeting? No great beneficial change or reform was ever effected without some dissentients; and in this particular case, wherein the public health and convenience are concerned, the vestry is omnipotent to act. Such a change as might be thus wrought would enhance the value of surrounding property. The aspect of the place, instead of being repulsive and hideous, might be consoling even to the mourner; and the resting-places of the departed, whilst more accessible, would be none the less distinguished. M. A.

RAILWAY MATTERS.

THE traffic receipts of railways in the United Kingdom amounted, for the week ending the 23rd of July, on 11,335 miles, to 705,470*l.*; and for the corresponding week of last year, on 10,930 miles, to 631,289*l.*; showing an increase of 405 miles, and of 74,181*l.* in the receipts. The traffic receipts amounted for the week ending the 30th of July on 11,376 miles, to 714,989*l.*, and the corresponding week of last year, on 10,970 miles, to 658,047*l.*, showing an increase of 406 miles, and of 56,042*l.* in the receipts. —— A further sale and demolition of property required to complete the enlargement of the Brighton Company's terminus at London Bridge has taken place. The viaduct for this purpose, terminating at the back of the International Hotel, and to accommodate the company's South London as well as general traffic, is rapidly approaching completion. —— The Metropolitan Railway Company held their half-yearly general meeting on the 17th instant. The report stated that the net receipts of the railway for the past half-year enabled the directors to recommend a dividend at the rate of 5 per cent. per annum on the preference stock, and at the rate of 5½ per cent. per annum on the ordinary stock, carrying forward to the credit of next half-year a balance of 2,463*l.* 6s. 10d. The report congratulated the shareholders on the steady increase of traffic, and the satisfactory progress of the company's affairs.——The last girder of the iron bridge over the Thames at Blackfriars has been raised to its position; and it is expected that the line of the Chatham and Dover Company will be completed across the river by the 1st of October, and opened, together with the Ludgate Viaduct, through to St. Paul's Station.——It appears from a statistical return of the results of the session, that of the 332 railway bills deposited with Parliament 232 were for England, 43 for Wales, 30 for Scotland, and 27 for Ireland. Of these, 73 were withdrawn by the promoters, 50 were rejected in committee or by Parliament, and 209 received the royal assent.

CONTINENTAL NEWS.

Paris. — In accordance with the Emperor's "suggestion," the Hôtel Dieu is to be commenced forthwith. A committee is already engaged in considering site, plans, &c., and it is thought that the first stone will be laid before the autumn. The Emperor would have liked doing this on the 15th instant, but the preliminary work rendered this impossible.——A sad accident happened last week at the Church of the Jesuits in the Rue de Sèvres. Some workmen were engaged in restoring one of the side chapels: a ladder was being moved in an upright position, when it swayed and fell on the head of the Marquise de Polignac, who was attending mass. The lady was in her 77th year, and the blow struck her dead on the spot.

Limoges. — A joint-stock company has just been formed at Limoges, in the Department of Haute Vienne, in the south of France, for the purpose of building a new quarter for the manufacturing population of that growing city. The capital is to be 1,250,000 francs, in 2,500 shares of 500 francs each, and the directors are M. Michel Chevalier, senator of France and officer of the Legion of Honour (chairman); General Dalesme, commanding the division of Engineers; M. Laporte, member of the municipal council; M. Peconnet, the mayor of Limoges; and others.

Vichy.—M. Garnier, the architect of the New Opera at Paris, has been here in connexion with some important buildings to be forthwith erected. Among these are a museum and a library, to be built with the proceeds of a lottery, to which the Emperor has given his sanction.——Emil Pereire, the *financier*, has bought a large quantity of land, and intends erecting a series of comfortable hotels and elegant villas in this fast-rising watering-place. Madame de Sévigné was the first to call attention to Vichy as a bathing-place, and the Emperor has given orders for a monument to be erected to her memory.

Amsterdam. — The Permanent Exhibition of National Industry (Het Paleis voor Volksvlyt) is rapidly approaching its completion, and will probably be opened in September. The building has an area of 6,750 square mètres, and will cost a million and a quarter of florins—upwards of 100,000*l.*

Vienna.—The last stone of the finial on the top of St. Stephen's was fixed on the 28th of July. ——Baron Pasqualati, well known in this city for the interest he takes in all matters connected with the stage, has obtained a concession for the erection of a new and very large theatre.

Cologne has had a nine days' festival—the 700th anniversary of the arrival of the bones of the Three Magi from Milan. Every day brought thousands of people from all parts, and every hour there were processions of pilgrims, some amounting to 3,000 men and women, all come with the object of having their rosaries, charms, medals, or prayer-books touched by the miraculous bones. The last day was the greatest, and closed with an enormous procession, in which four bishops took a part. Are we *really* in the nineteenth century? —— The committee for selecting a design for a statue of King Frederick William III. of Prussia, to be placed on the "Neumarkt," at first decided in favour of that by Mr. Mohr, sculptor to the cathedral; but the decision was not very graciously received by the powers that be, on the ground that his design had a democratic tendency: he had represented the king surrounded by the heroes and statesmen of his time, by Kleist, Macdonald, Blücher, &c., from whom he receives back the crown, taken from him virtually, though not in reality, by the French. And so the second design, by Bläser, has been adopted, and Mr. Mohr receives the title of Professor, as a shin-plaister. Mr. Bläser's design is an equestrian statue—*pur et simple*.

FROM SCOTLAND.

Edinburgh.—As the spire of Barclay Church, Edinburgh, was being repaired, the cage, in being hoisted up with five men in it, gave way. Fortunately the cage was but 15 ft. from the ground. All the men, however, were bruised, and one had his ankle broken.

Moffat.—At a public meeting here, called by Mr. J. P. Trotter, sheriff-substitute of Dumfriesshire, to take into consideration the adoption, in whole or in part, of "the General Police and Improvement Act (Scotland) 1862," it has been resolved that the Act be adopted in whole.

Dundee.—The plan for the restoration of the old tower, it was believed, had been settled. The committee, however, have just reported to the council, that Mr. Scott, the town's architect, had conferred with Mr. Gilbert Scott, and that the latter, recollecting the decayed state of some of the finest features of the tower, thought it would be advisable, before deciding on the method of its restoration, to send down an assistant to inspect it, and take accurate measurements. Mr. James was indignant because Mr. Scott had not been sent to London by the committee, to see Mr. Gilbert Scott, but had acted on the unofficial authority of a portion of its members; and he moved that the minute be "expunged;" and the disapproval of the minute was carried by a majority of ten to four. It is most likely, the *Warder* thinks, that the majority of the members did not intend to disapprove of the restoring project, but merely to condemn the irregular method in which action had been taken. It is roughly estimated that the cost will approach to, if it does not exceed, 3,000*l.*; and some gentlemen, who are anxious for the restoration of the old steeple, which forms a characteristic feature of Dundee, intend immediately to set about obtaining subscriptions to effect that purpose.

Cowpar-Angus.—The foundation stone of a new United Presbyterian Church has been laid here. The building is from the plan of Mr. John Haggart, architect, Washington. The style is Norman. The building will be 65 ft. by 42 ft., outside measure. The minister's room and session house are at the west end. The east, being the front to the street, will be the principal elevation. The total height of the spire will be about 75 ft. There will be four windows in each of the side walls. The modern style of a platform for the minister has been adopted, and will be placed in the west end. There will be a slight eleva-

tion in the seats as they recede from the platform, and a gallery is to be placed in the east end. The beams of the roof will not be shown, the ceiling being decorated with an ornamental cornice. The building will accommodate 500 sitters.

Rothienorman.—The old mansion house of Rothie has been completely "Normanised" by the present proprietor, Colonel Leslie, and greatly enlarged into a castellated building, to which the ancient name of Rothienorman has been restored. The castle stands in a picturesque hollow, north-east of the Rothie station, and near the Home farm steading, also built by Colonel Leslie. Mr. Matheson was the architect of the castle, of which a view is given in the *Banffshire Journal*.

PROVINCIAL NEWS.

Oxford. — The foundation-stone of the new Masonic Lodge, about to be erected in conjunction with the Clarendon Hotel, Oxford, for the Apollo University Lodge of Freemasons, has been laid with the usual masonic rites. Mr. Edward G. Bruton, P.M., 340, P.Pr.G.W., is the architect, and Mr. Thomas Baker, the builder. The building will comprise a lodge-room, banqueting-rooms, ante-room, and waiting-rooms. The lodge-room will be 52 ft. long by 26 ft. wide, and have a vaulted roof, the room being 26 ft. high to the crown of the vault. The vault will be spanned by five ribs, which will be finished in rainbow tints; the plastering between being finished in blue colour. The room will be lighted, in the day time, by a lantern light, and at night by a series of gas jets above the cornice of the room. The central portion of the floor will be laid with tesselated tiles; the margin being left for carpeting. The room will be heated with hot water. —— The site of the old workhouse, 5a. 0r. 6p., has been sold for 8,000*l*. At auction 7,910*l*. had been offered, but the reserved price was 8,000*l*., and it was immediately afterwards sold for that sum to Mr. Ambrose Smith.

Bath.—A meeting of the watch committee was held, for the purpose of considering the tenders for the erection of a new police-station in the Orange-grove. The lowest tender sent in for the whole work amounted to 2,295*l*. By choosing separate tenders for different parts of the work, it was found that the cost would be 2,187*l*. 10s., showing a saving of 107*l*. 10s. The committee, it is reported, will accordingly recommend to the council the acceptance of the separate tenders. None of the tenders included locks, iron shutters, and gas apparatus, which are estimated to cost 128*l*., so that the entire amount of the contract will be 2,315*l*. 10s. The architect's estimate for the cost of construction is thus exceeded by 315*l*., and the new edifice will entail an expenditure of more than 4,000*l*.

Bristol.—The foundation-stone of a new building, to be devoted to the purposes of a workmen's hall, has been laid in St. James's-back. The building will be 80 ft. long by 40 ft. wide. The ground-floor will consist of a coffee-room, 28 ft. by 18 ft.; a smoking-room, 21 ft. by 18 ft.; a kitchen, 18 ft. by 12 ft.; besides which there will be bath-rooms, lavatory, vestibule, entrance-hall, &c. There will be a lecture-hall, 37 ft. by 18 ft., and 20 ft. high; class-rooms, and bedrooms for persons in charge of the building. By the side of the building there will be a gymnasium, 50 ft. by 30 ft.; and there will also be an open yard, 52 ft. by 23 ft. The cost of the hall will be about 1,000*l*. It is thought that the hall will be ready for opening about the first week in October. The plans were prepared by Mr. J. Lawrence, of Bristol; and Mr. J. P. Stephens is the contractor.

Truro.—A scheme is on foot for erecting a suite of public buildings in Truro on the limited liability principle. Promises have already been received of support to the extent of 4,000*l*. It is calculated 6,000*l*. will be required.

Knighton.—The contract for building a new hotel for the Knighton Hotel Company, from the designs of Mr. Thos. Nicholson, architect, Hereford, has been undertaken by Messrs. Drake & Co., builders, London.

Aberystwith.—Mr. Savin, the railway contractor, has just commenced to make extensive additions to the Castle, his Aberystwith residence. The additions will render the Castle a spacious edifice. The new portion will have the same castellated architectural characteristics as the old. Mr. Savin purposes extending the terrace fronting the sea, and making other improvements.

CHURCH-BUILDING NEWS.

Hoddesdon (Herts).—The first stone of the new building for the enlargement of Hoddesdon Church has been laid. The contractor for the work is Mr. John Hunt, of Hoddesdon. The building will be from designs by Mr. Joseph Clarke, the diocesan architect. The enlargement will give 280 additional sittings, which, with 500 in the old building, gives a total of 780. The cost of the new building, which will consist of a chancel with north and south chancel aisles, will be about 2,000*l*.; and the cost of re-seating, restoring, and re-furnishing the old building, about 500*l*.

Tenterden.—The works connected with the restoration of the parish church are progressing, the masonry and plastering being nearly completed, and the new floor and seats, although not yet in the building, are ready to go in as soon as the dwarf walls and concreting are ready to receive them. The tracery of the windows, ten in number, in the north and south aisles, is decorated, and the material is Bath stone. In place of the chancel arch, a Gothic one has been erected: this is also of Bath stone. By the removal of the organ-gallery and the screen which separated the tower from the nave, the west window has been thrown open to view, and also a perpendicular arch of Bethersden marble. The architect is Mr. E. Christian; and the mason is Mr. H. Pennel.

Little Langford (Wilts).—The Church of St. Nicholas has been re-opened by the Bishop of Salisbury. It has been entirely rebuilt on its old foundation, and the original architectural characteristics have been preserved. It consists of a nave, chancel, and south transept, which is of the Decorated period, the rest of the church being erected in the Perpendicular style, excepting the west end, which is Early English. The sanctus bell is placed over the chancel arch, in an open wooden turret. There are five painted windows, four of which were given by Lady Herbert, of Lea, the east window being placed in the church as a memorial of the late Lord Herbert. This window has three lights, the subject being the Crucifixion, and the Virgin and St. John. In the south window of the chancel the subjects are treated archaically, and are the Good Shepherd and Our Saviour Knocking at the Door. The east window of the chantry has a figure representing St. Nicholas, the patron saint of the church. The upper west window is filled with stained glass, the gift of Mr. T. H. Wyatt, the diocesan architect, the subject being the Baptism of Christ. All these windows were executed by Messrs. Lavers & Barraud. The roof of the nave and transept is open, the spaces between the rafters being tinted blue. The roof of the chancel is boarded. The old font, which is early Transition, has been preserved, and retains its original place at the west end of the nave. The chancel is paved with Minton's encaustic tiles, the tiling within the rails being partially glazed. The seats are of stained deal, and the church is heated by a warm-air apparatus. The south window of the transept is a Decorated one. On the south side of the nave is an ancient Norman doorway, which belonged to the original church, and which has been preserved. The arch displays the billet and zig-zag mouldings, and in the tympanum are some rude specimens of ancient sculpture, representing an ecclesiastic with a crosier, in the act of giving the Benediction, three birds on a tree, and some dogs hunting a wild boar. The capitals of the columns on each side of the doorway are carved with rude designs. The church is built of flint with stone dressings. The contractors were Messrs. Davis & Son, of Frome.

East Lulworth. The parish church has been so far completed that it has been re-opened for Divine service. Mr. J. Hicks, of Dorchester, is the architect employed; and the contractor is Mr. Wellspring, of the same place. In clearing away the ground, the foundations of the old chancel were discovered, and the new one has been carried out to the same extent, with a three-light Perpendicular window at the east end, the whole of the other windows also being restored in the same style. Traces were also found of the old north chancel aisle, where is a vault of the ancient family of the Welds; and here a vestry has been erected. A new south porch replaces that which previously existed. Instead of pews there are open benches; and notwithstanding the removal of the gallery, 59 additional seats have been obtained, the tower arch having been cleaned, and this part thrown into the church; so that, with a lofty chancel arch, the interior is open from end to end. T roof is open timbered, stone corbels supporti the arched ribs; and it has been raised in pite the outside being covered with tiles surmount with a ridge crest, and eaves gutters substituti the parapet, to avoid injury from the same cau that had been so injurious to the old roof. T tower has not been interfered with. It is nc nearly covered with ivy. A door was found the east end of the north wall, which no dou originally led to the rood-loft. Funds are st required for seating and completing the fittin of the chancel, as well as the ringing-floor of t tower.

Upton-on-Severn. — The residence of S Edmund Lechmere, Bart., at the Rhydd, h been undergoing some alterations and addition under the direction of Mr. Braddon, architec There is also a domestic chapel in the course erection, Mr. C. F. Hanson, of Clifton and Mr vern, being the architect. It is situate in th pleasure-grounds, and is connected with th house by an ornamental passage forming a co servatory. The interior of the edifice is divide into two parts: the eastern portion, which is f the family, is fitted up stall-wise; the oth portion being available for residents in the in mediate neighbourhood, who will enter by porch on the south side. There will be sitting for about 40 persons. The style is Early Englis having an apsidal termination at the east. Th chapel is divided into four bays by projectin buttresses, each bay having a couplet windo except the oriel window, which is a triplet. light iron screen separates the domestic fro the public portion of the chapel. On the nort side is an organ-chamber, opening by two arch into the chapel, and also a small vestry. It intended to have the porch and belfry of wood

Dudley.—It is proposed to restore the interi of St. Edmund's Church. At a recent vestr meeting Mr. Wm. Bourne, architect, read a repo showing that the roof, parapets, doors of tower ringing-room, porch, entrance gates, walls chancel, and floors of gallery wanted repair The windows throughout required alteration, an he suggested that the churchwardens should pu themselves in communication with the Messrs Chance, on purpose to learn what the cost improvement would be. The church wante thoroughly cleansing; but the colouring shoul certainly be abandoned, and painting substitute so that it could be afterwards cleaned at a sma cost. The estimate for this work would amour to about 220*l*., and if, as suggested, the old pew were altered or removed, a further outlay 120*l*. would be required. A committee was ap pointed to take steps to raise the requisi funds.

Stainby. — The church at Stainby, Lincol shire, is being enlarged and restored at th expense of the rector, the Rev. G. Osborne, wh on the 20th ult., laid the foundation-stone. T designs were supplied by Mr. Gillett; Mr. Coa of Mr. Scott's office, furnishing details. Th contract was taken by Messrs. Halliday & Cav of Greetham Oakham, for about 4,000*l*., includin restoring the church, and building new tow and spire. Mr. G. Walters is foreman of work

Books Received.

VARIORUM.

"Borough of Blackburn: Public Works (Manu facturing Districts) Act: Report on the Exper diture for the year ending June 30th, 1864. This report, by the Borough Surveyor of Black burn, Mr. Frederick Smith, shows the followin summary of works done in 1863-4:—

Sewerage works and house drainage, &c. ...	£15,773	1
Highways and private improvements	16,946	2
Improvements in the Park	490	0
	£33,209	4
Materials on hand belonging to the sewerage department	1,200	0
Materials on hand belonging to the highway department	3,100	0
	£37,509	4

There are also tables which show how far th Act has assisted in alleviating the recent di tress in the town; proving that it has in thi respect realized the intentions of the promoter irrespective of the many sanitary improvement which it has enabled the local authorities carry out, and which were much needed in th borough. The expenditure on sewerage an drainage alone enabled them to form ten mile of pipe sewers and 1½ mile of brick sewers: pr

vate drainage was completed in 355 houses, and prepared for to the line of building for 605 houses. ——"Railway Accidents: edited by C. Manby, M. Inst. C. E., Hon. Sec., and J. Forrest, Inst. C. E., Secretary. By permission of the Council. London: Clowes & Sons." This pamphlet comprises the following papers, read before the Institution of Civil Engineers during the session 1861-2:—Railway Accidents, their Causes and Means of Prevention. By James Brunlees. Railway Accidents,—showing the Bearing which existing Legislation has upon them. By Capt. Douglas Galton, R.E. There is also an abstract of the discussion upon the papers, in which Professor Airy, Mr. Babbage, Sir Joseph Paxton, Mr. Bidder, and others, took part. The pamphlet is an important one, in which many engineering questions are treated of with reference to the causes of railway accidents. We may quote a brief passage from Mr. Brunlees's paper, as appropriate to the present season of the year and to that on which we are about to enter:—

"Most railway accidents occur during the winter, and in this changeable and uncertain climate that is not surprising. It frequently happens that the early winter months are so wet as to render any attempt to repair the roads worse than useless. Frost then sets in, and the road remains in a bad state for weeks, if not for months, and, as a necessary consequence, it is in its worst condition, when the tyres and axles are most brittle and least able to encounter its inequalities. As this untoward state of affairs tends greatly to augment the number of accidents, it is evident, that during the months of September and October, an extra number of men should be employed to drain the ballast and beat up the road, in order that it might become consolidated, before the winter's rains and frosts set in. The pernicious effects of frost on wet ballast would thus be avoided, and although additional labour and outlay would for a time be required, it must be remembered that fewer repairs would be afterwards needed, and that throughout the winter a good and safe road would be secured."

Miscellanea.

Admiralty.—Captain Andrew Clarke, R.E., has been appointed Director of Engineering and Architectural Works, in the place of Colonel Greene, resigned.

Sussex Archæological Society.—The society had its usual excursion, to Seaford, on Thursday, the 11th, and visited the churches of Bishopstone, Blatchington, and Seaford, under the guidance of Mr. M. A. Lower.

State of the Steeples.—We are informed that the Bishop of London has caused inquiries to be made as to the condition of belfries mentioned in a recent communication in our pages, and that improvement may be hoped for.

Art Union of London.—The exhibition of prizes now open in Suffolk-street consists of 158 works, oil paintings, paintings in water-colour, statuettes, and metal work. We have already given a list of the principal pictures, and advise a visit. Next week the exhibition will be open to the public free, as usual.

Female School of Art, Queen's-square, Bloomsbury.—We are glad to learn, on the authority of Miss Gann, the indefatigable secretary of this school, that the recent efforts made in its favour have been very successful, and that the proceeds of the bazaar held at the Horticultural Gardens in June amount, together with donations received since January 1, to the sum of 2,412*l.* 8*s.* 2*d.*

Photography.—The London Stereoscopic Company have published some fresh portraits of Lord Palmerston. The one showing our Nestor of politicians nearest the spectator, the head larger therefore, is the best, but is marred by the large *open* book in his hand on the desk, of course an ugly white splotch. It often surprises us that men who are executing portraits all day long, and must know exactly what photography can do, and what it cannot, should so often make mistakes as they do in matters of arrangement and "pose."

Charing-cross.—Mr. G. J. de Wilde, of Northampton, writing to the *Reader*, states that the popular etymology of "Charing," from *Chère Reine*, cannot possible be correct. In the narrative of the quarrel between the merchants, of London and Northampton, in the *Liber de Antiquis Legibus*, the following passage, he says, occurs:—"Quibus literis impetratis, ecce! rumores quod predicti prisones fuerunt apud Cherringe juxta Westmonasterium ubi Maior et Vicecomes Norehamptone illos adduxerunt." This was in 1260, and Queen Eleanor (the *Chère Reine* in question) died in 1291.

The New Factory Act: Ventilation by Law. The New Factory Act has just been printed. Factories are to be ventilated under penalties, and no child under eleven years of age is to be employed. Meals are not to be taken in certain places, including a factory for the manufacture of lucifer matches.

New Act on Public Works in the Manufacturing Districts.—An Act was passed on the 29th ult., to extend the powers of the Public Works Act of last year in the manufacturing districts. By the former Act 1,200,000*l.* were authorised to be advanced, and a further sum of 350,000*l.* is now authorised to be advanced to complete the public works commenced.

Mr. Mellon's Concerts.—At the present moment, when nearly all places of public amusement are shut, the public have especial reason to be grateful to Mr. Alfred Mellon for the provision of good music at a low price. With an admirable orchestra, Mdlle. C. Patti, Mdlle. Krebs, Mr. Levy, and others as soloists, the Italian Opera House, Covent Garden, as the *soli*, and Mr. Mellon's own good taste and experience to guide the selection, success is of course attending the undertaking.

Adelphi Theatre.—"The Actor's Retreat," a little *pièce de circonstance* serves to introduce not merely the various Adelphi favourites in their proper person, but a view of the Dramatic College in its finished state. Mr. Toole is the central point of the action, and all turns smoothly round him. Mr. Benjamin Webster has resumed with excellent effect his very good part, *Triplet*, in "Masks and Faces," capitally supported, as originally, by Mrs. Stirling as *Peg Woffington*.

The Horticultural Gardens.—By command of the Queen, as we have already mentioned, the council have directed that these gardens shall be opened freely to the public on Friday, the 26th inst., the anniversary of the birthday of the Prince Consort. There will be entrances to the gardens at the east in Exhibition-road; west in Prince Albert's-road; and south in the Exhibition-road. The entrances will be opened at ten and closed at six o'clock. The conservatory, orchard houses, the arcades, and the maze will all be opened. The cascades and Minton's Fountain will play. The Old Hundredth Psalm, a hymn composed by the Prince Consort, and "God Save the Queen," will be sung by the visitors. Bands will perform at intervals during the day.

Discovery of Roman Remains at Bath.—During the excavations in Hot Bath-street for the new wing of the Bath United Hospital, the foundations of a large Roman building have been recently discovered. These foundations, according to the local *Chronicle*, are exceedingly strong, and indicate that the building to which they belonged must have been one of some importance. The base of a pillar, turned upside down, and built into the foundation, was likewise found, and appears to have formed part of even an older structure. A further discovery has been made, in excavating the site of the house lately in the occupation of Mr. William Foote, Lower Borough Walls. This discovery consists of a large portion of a tesselated pavement. In the centre is a rose, which is surrounded by several borders of geometrical pattern.

Drinking-fountain Movement. The committee of the Metropolitan Free Drinking Fountains Association have received a contribution of 60*l.* from a lady in Brompton, and of 100*l.* from a gentleman in Pimlico, towards the two fountains just opened by the Society outside the Kensington Museum, and in the high road leading to Battersea Park. A gentleman in Fifeshire has also offered to pay the cost of a fountain to be erected near the Kensington Potteries.——A fountain, the gift of Mr. T. J. Miller, M.P., is in the course of erection in Middleborough, Colchester, near the cattle market. A drinking-fountain has also been provided upon East Hill, by Mrs. George Round. The water flows through an aperture made in the brick wall adjoining that lady's greenhouse, so that the passers by may conveniently obtain a draught. The fountain consists of a stone placed in a niche in the brick wall, with a cast-iron bowl inlet in the stone, whence a stream of water issues from a small lion's mouth, and is caught and drunk out of an iron enamelled cup. Over the arch of the fountain is chiselled the text from the Psalms, "With joy shall ye draw water." The water is supplied from the waterworks to a tank in Mrs. Round's conservatory.

Water Supply of Naples.—The authorities at Naples are about to introduce a new supply of water for the use of that city. Mr. Bateman has reported on the project, which is to cost 750,000*l.* The water is to be conducted a distance of 47 miles, and the quantity to be served per head of the population is 20 gallons per day. The present supply is about 8 gallons per day.

Public Park for Farnworth.—Mr. Barnes, M.P. for Bolton, has just presented a park to the local Board, for the "free and recreative enjoyment of the inhabitants of the district of Farnworth," near Bolton. The park, which is about 11 acres, is laid out, beautified, and ornamented at the expense of Mr. Barnes; and it is estimated at between 12,000*l.* and 13,000*l.* in value.

Mausoleum at Roehampton.—The Bishop of London, on the 16th, consecrated the mausoleum erected by Mrs. Lyne Stephens, in the grounds of her residence at Roehampton, Surrey. The mausoleum immediately adjoins the parish church and consecrated ground of Roehampton. To this building are, we believe, to be removed the remains of the late Mr. Lyne Stephens, which were temporarily deposited in Kensal-green Cemetery, some years ago. The mausoleum is from the designs of Mr. William Burn.

Royal School of Naval Architecture.—This new school, under the control of the Lords of the Committee of Council on Education, in conjunction with the Admiralty, will be opened at South Kensington in November next. The Rev. J. Woolley, LL.D., of St. John's College, Cambridge, principal of the school of naval architecture at Portsmouth, has been appointed, with the concurrence of the Admiralty, inspector-general and director of studies; and Mr. C. W. Merrifield, F.R.S., principal of the school.

Accidents.—An accident, which proved fatal to one man and injurious to several others, has occurred at the Haigh Foundry Company's brick mill forge, Haigh, near Wigan. Seven or eight men were at work repairing a patent hammer, when suddenly the roof of the building gave way, and the workmen were covered with the *débris*. All were extricated safely except one, who sustained fatal injuries.——Whilst a quarryman was in the act of raising stones in the quarry of Mr. Morgan, at Corbally, Limerick, the quarry bank under which he had been working suddenly collapsed, killing him before he had time to effect his escape.

The Witcomb Reservoir, Gloucester.—One of the embankments of this reservoir appears to have given signs of displacement, and the waterworks committee of the local Board of Health employed Mr. Owen to report on the subject. This he has done; and in his report he attributes the signs of failure to an inherent weakness of the clay forming the embankment, and recommends a considerable counter weight at the base to prevent spreading. The report has been considered, together with the committee's, by the local Board; and they have passed a resolution to the effect that Mr. Owen's suggestion should be carried out. It was also resolved that a tender made for the depositing of the stone should be accepted, and it was understood that the clerk should telegraph for Mr. Richardson, the new surveyor, in order that the work might be set afoot as soon as possible. A resolution moved by Mr. Hawkins, that the Board should advertise for tenders, was not seconded.

The Carpenters' Company.—On Tuesday, the 9th, being the day appointed for the election of Master and Wardens of the Carpenters' Company, that ceremony took place at their ancient hall, where, according to the *City Press*, they elected for Master Mr. R. J. Stuckey; for Senior Warden, Mr. W. Biggerstaff; Middle Warden, Mr. J. Blyth; Junior Warden, Mr. G. Rasher. The custom of crowning the new Master and Wardens still exists in the Company, and the crowns or garlands used for the purpose are the same which were in their possession nearly three centuries ago. It was customary at one time for the Company to invite certain official personages to the entertainment on the election day. The King's Carpenter was a constant guest on that occasion and on others. The King's Surveyor also frequently honoured the Company with his presence, and in this capacity the books show that Sir Christopher Wren received an invitation to dinner together with his wife. The Company, to the number of about ninety, after the ceremony, dined at the Trafalgar, Greenwich.

Gas.—The Southampton gas company have announced a reduction in price to 4s. 6d. per 1,000 cubic feet.——The Taunton gas company have declared a dividend of 8 per cent. for the last year.——The Ludlow gas company have consented, at the instance of the consumers' committee, to reduce their price from 7s. to 6s., with a discount of 6d. per 1,000 ft. for payment, within a month.

How to trap Ants.—Houses that are infested with ants, black or red, may be disinfected by a little attention to trapping them. A sponge is one of the best things for the purpose. Sprinkle it with dry white sugar: the sponge being slightly moist, it will adhere. The ants will go into the cells of the sponge after the sugar in large numbers and can be destroyed in hot water, and the sponge squeezed out and sugared again, and returned to the closet for another haul, until all are caught.

Ancient Frescoes.—An important discovery has been made at Lucerne, consisting of frescoes which were laid bare during some restorations in the house Corrazioni, and which are ascribed to Hans Holbein. They represent, among other subjects, the Resurrection, the Ascension, John the Baptist, St. Beatus, and a bishop consecrating a chalice. They bear the date of 1523—the time when Holbein was engaged in decorating several houses in Lucerne with frescoes.—*The Reader.*

Rainfall of Last Quarter.—Mr. Glaisher reports to the Registrar-General that at the Royal Observatory, Greenwich, the rainfall in the quarter ending the 30th of June last was only 3·5 in., being 2·3 in. below the average since 1840. At places south of latitude 51 deg. the returns show a rainfall of 3·7 in. in the quarter, but a larger quantity fell in Cornwall and the Isle of Wight: between latitude 51 deg. and 52 deg.;—that is, up to Ipswich, Buckingham, and Tewkesbury, returns show a rainfall of 4·8 in.; thence up to latitude 53 deg., 4·5 in.; thence up to latitude 54 deg., 7·1 in.; thence up to latitude 55 deg., 6·3 in.; north of that line, 5·9 in.

New College, Dulwich.—The proposal of the governors of God's Gift College, at Dulwich, to erect a new college, at a cost of 40,000*l.*, has met with opposition in St. Luke's (Old-street), St. Botolph's (Bishopsgate), and St. Saviour's (Southwark), three out of the four parishes concerned; but the governors have applied to the Charity Commissioners for the sanction of a site of the proposed college, which is to be erected from plans by Mr. Charles Barry. The site submitted for the approval of the Charity Commissioners is near the Dulwich station of the London, Chatham, and Dover Railway, and there is here an available space of forty acres, about twenty-four of which will be covered by the new college and playgrounds for the accommodation of 570 lads,—320 in the upper school and 250 in the lower. The picture-gallery is to remain where it is, but all adjacent buildings are to be removed, to obviate the risk of fire. The chapel is to be enlarged, to make it capable of accommodating 752 persons, it being only available at present for 322. The cost of these alterations will amount to 19,500*l.*, which, with the 40,000*l.* for the new college, will make nearly 60,000*l.* to be expended.

Monumental. — Strenuous efforts are being made to raise subscriptions towards erecting a statue to Shakspeare in Melbourne. Several influential gentlemen have taken the matter in hand. A model has been prepared by Mr. Summers, sculptor. —— A committee for the erection of a statue of Béranger in Paris has been formed, consisting of writers and journalists of all kinds.——A statue, says the *Reader*, is to be erected to the celebrated French painter Greuze, the favourite of Marie Antoinette, at his birthplace, Tournois, in Bourgogne. Greuze, the favourite of the "Broken Pitcher," was once in very high renown and state in France; but he died in 1804, neglected and in deep miscry. When Napoleon I. accidentally heard of his death he said, "Why was he too proud to apply to me? I should have given him a pitcher of Sèvres filled with gold, wherewith he might have mended all his pitchers again!" It is the Emperor's wish that the dead master should now be honoured with a statue.——The memorial statue erected in the Abbey-yard, Tavistock, to the late Duke of Bedford, has been uncovered. The statue, 7 ft. high, is of bronze, and is placed on a circular pedestal of granite, 8 ft. high. The sculptor was Mr. E. B. Stephens, of London.

Archæological Discovery in Constantinople.—An accidental fire which took place a few weeks since has led to an interesting discovery, by clearing away a mass of houses which had concealed an important monument of Byzantine history hitherto but little observed,—the Coronation Hall of the Emperors from the time of Heraclius downward. It stands at the north-west angle of the city, near the so-called Adrianople Gate, and on the spot where the wall of Heraclius (with which this building was plainly contemporary) joins that of Theodosius.

Statues and Frescoes for the British Museum.—The greater part of the remnant of the once celebrated Farnese collection, belonging to the ex-King of Naples, is on its way to England, having been purchased, through Mr. Newton's agency, for the British Museum, for 4,000*l.* The Pontifical Government courteously consented to allow the exportation of these works of art without the usual duty of 20 per cent. *ad valorem*, which in the present case would have added 1,000*l.* to the price, or taken a similar sum out of the king's pocket, as the contract might have been stipulated. The collection of ancient sculpture in the British Museum will be much enriched by this addition. The gem of the collection is a Mercury, similar to the celebrated one in the Vatican, but with the hand and attributes complete.

TENDERS.

For Wesleyan Chapel, Market Drayton, Shropshire. Mr. George Bidlake, architect:—

Tranter	£1,150 0 0

For Christchurch Schools, Wellington, Shropshire. Mr. George Bidlake, architect:—

Oliver	£414 0 0

For Trinity Schools, Wolverhampton. Mr. George Bidlake, architect:—

Palmer	£670 0 0

For Herne Bay Congregational Chapel. Mr. W. F. Poulton, architect:—

Sawyer	£3,481 0 0
Simpson	3,178 7 3
Brown	3,135 0 0
Lancefield	3,058 0 0
Adams	3,035 0 0
Bonnett	2,861 5 0

For new warehouse, St. Dunstan's-hill, City, for Mr. W. S. Field. Mr. G. A. Young, architect. Quantities supplied by Messrs. Shoppee & D. Cubitt Nichols:—

W. Cubitt & Co.	£3,974 0 0
Lawrence & Sons	3,922 0 0
G. Mansfield & Son	3,900 0 0
Piper & Wheeler	3,699 0 0
Brass	3,683 0 0
Browne & Robinson	3,645 0 0
Adamson & Sons	3,546 0 0

For building a pair of semi-detached houses in Prestwich Park, near Manchester, for Mr. Jos. Kenyon. Mr. Thos. Dale, architect:—

Schofield (accepted)	£1,460 0 0

For building East London Bank, Cornhill. Messrs. Long & Bond, architects:—

Lawrence & Sons	£4,970 0 0
Piper & Wheeler	4,775 0 0
Lemon	4,700 0 0
Perry & Judson	4,655 0 0
Hill & Keddell	4,589 0 0

Browne & Robinson	8,780 0 0
Hart (accepted)	8,435 0 0

For rebuilding house No. 8, Crombies-row, Commercial-road East; raising a story upon No. 7; and erecting two houses and offices at the rear. Mr. G. H. Simmonds, architect:—

Macers	1,895 0 0
Kilby	1,867 0 0
Outhwaite	1,798 0 0
Eaton & Chapman	1,664 0 0
Wood, Messrs.	1,587 0 0
Jacobs	1,420 0 0

Accepted for a church at Anlaby, near Hull. Mr. Wm. Kerby, architect:—

Sergeant (bricklayer, &c.)	£307 0 0
Brown (carpenter and joiner)	242 5 0
Wallis & Tadman (masons)	157 10 0
King & Peach (ironmongers)	72 0 0
Smith (slater)	67 0 0
Halliday (plumber and glazier)	33 0 0
Wright & Dreyer (painters)	23 0 0

For a building to be erected in Southwark-street for the Hop Planters' Company. Mr. E. I'Anson, architect:—

Macey	£8,088 0 0
Axford	7,650 0 0
I'Anson	7,494 0 0
Hack	7,190 0 0
Conder	7,168 0 0
Gammon	7,340 0 0
Coleman	7,275 0 0
Ashby & Horner	7,260 0 0
Rider	7,140 0 0
Browne & Robinson	7,080 0 0
Downs (accepted)	6,961 0 0

For an entrance-lodge, Chase-side, Enfield, for Mr. C. Walford. Mr. F. G. Widdows, architect:—

Ennor	£326 0 0
Field & Sons	310 0 0
Cushing	299 0 0
Patman	295 0 0
Fairhead	283 10 0

For alterations to premises in Baker-street, Enfield, for Mr. P. Rumney. Mr. F. G. Widdows, architect:—

Field & Sons	£311 0 0
Patman	298 0 0
Fairhead	295 0 0
Cushing	289 0 0
Ennor	286 0 0

For rebuilding No. 3, Great Woodstock-street, Marylebone, for Mr. Benj. Colson. Mr. Charles Bradley, architect:—

Robinson	£815 0 0
Huggett (accepted)	700 0 0

For building a pair of semi-detached residences at Shrewsbury-lane, near Shooter's-hill, Kent, for Captain Harrison, Royal Artillery. Messrs. W. Gosling & Sons, architects. Quantities supplied:—

Grey	£2,010 0 0
Sutton	1,853 0 0
Thompson	1,650 0 0
Foster	1,618 0 0
Tongue	1,600 0 0
Ring & Wainman	1,600 0 0
Peskett	1,460 0 0
Harding	1,458 0 0
Hubbard	1,321 0 0
Warner	1,318 0 0

For gas and hot-water work to the new wing of Chelsea Workhouse, for the guardians of the poor. Mr. George C. Handford, architect:—

Gas Work.

Murrell	£153 10 6
Chappell	140 0 0
Suns & Marten	124 17 6
Buckley & Co.	113 0 0
Berry	108 0 0
Warren Smith (accepted)	94 0 0

Hot-water Work.

Simms & Marten	548 17 6
Weeks & Co.	540 0 0
Chappell (accepted)	497 17 9
Berry	475 0 0

For rebuilding premises for Mr. Newling, St. Michael's-alley, Cornhill. Mr. William Lee, architect. Quantities supplied by Messrs. Linsell & Giffard:—

					Extra for polished granite pilasters.
Cannon	£1,310	0	0	...	£29 0 0
Manes	1,279	0	0	...	33 0 0
Newman & Mann	1,225	0	0	...	30 0 0
Fish	1,200	0	0	...	25 0 0
Wood	1,087	0	0	...	54 0 0
Perry & Judson	1,077	0	0	...	25 0 0

For rebuilding Elder-walk Ragged School. Mr. W. Smith, architect:—

Kilby	£595 0 0
King	487 0 0
Grover	438 0 0
Dunsdale	410 0 0

For repairs, &c., at No. 12, Highbury-place, for Mr. Wm. R. Spicer. Mr. Wm. Smith, architect:—

Phillips	£180 0 0
Wagstaff & Son	179 0 0

For carrying up the spire, building baptistery, &c., at Salter's-hall Chapel, Islington. Mr. Wm. Smith, architect:—

Dove, Bros. (accepted)	£592 5 0

ADDRESS, C. 70, CAMBERWELL NEW-ROAD, S.

PHOTOGRAPHY.
DOLAMORE & BULLOCK,
ARCHITECTURAL AND ENGINEERING PHOTOGRAPHERS,
30, REGENT STREET, WATERLOO PLACE, S.W.

TRACINGS COPIED.—Architects and Others who make drawings on tracing paper, may now procure COPIES of such DRAWINGS, of the same size as the originals, whatever their dimensions may be. These copies, being made by a photographic process, are in all respects fac-similes of the original drawings. For terms, and other particulars, apply to WILLIAM WILLIS, 6, Bath-row, Birmingham. N.B. No injury occurs to the tracings from being subjected to this process of copying. In transmission they should be protected by a roller, not folded. Single copies are returned by next post after receipt of tracing; a larger number the day following.

TO ARCHITECTS.—Perspectives in Outline, or artistically coloured in water or oil, Quantities of Works taken, and every other description of Professional Assistance offered, on moderate terms, by Mr. RICHARDSON, 1, Tachbrook-street, Pimlico, London, S.W.

A GOOD LEAD GLAZIER WANTED.—Apply to F. T. ODELL, 3, Bath-street, City-road.

BOROUGH of SALFORD, Broughton District.—OFFICE of SURVEYOR.—WANTED, a Person duly qualified to act as SURVEYOR of the SEWERING, DRAWING, PAVING, and other WORKS to be executed within the Broughton District, and fully competent to prepare plans, sections, specifications, and estimates. He will be required to devote the whole of his time to the duties of the office. Salary, 180l. per annum. Applications, with testimonials endorsed "Application for Office of Surveyor," to be sent to me not later than the 31st instant.—By order,
GEO. BRETT, Town Clerk.
Town Hall, Salford, 16th August, 1864

CLERK of WORKS WANTED.—The Guardians of the Whitechapel Union (N.E.) require the services (until about January next) of an efficient CLERK of WORKS, to SUPERINTEND the BUILDING for completion of the Union Workhouse. Salary proposed, 2l. 12s. 6d. per week.—Applicants to be made personally at the Workhouse of the above Union, on TUESDAY next, at SIX o'clock in the afternoon; or, in the meantime, to Mr. G. ADAMS FARR, Clerk to the Guardians at the same Workhouse.
17th August, 1864.

DECORATIVE ARTIST WANTED, who can paint Arabesque ornament and flowers in a superior style, and who is competent also to design and draw ornament full size. A liberal salary given.—Apply, by letter only, addressed to Mr. C. No. 14, Wigmore-street, W.

NOTICE to SURVEYORS and OTHERS. The Town Council and Local Board of Health for the Borough of Weymouth and Melcombe Regis are desirous of receiving applications from parties duly qualified to fill the OFFICE of SURVEYOR. The person to be appointed must possess a good practical knowledge of building and surveying, as he will be occasionally required to furnish estimates of builders' work generally, and to make plain drawings of the same; and also to take levels of and survey the roads, sewers, and drains within the district; he must also write a good plain hand, and possess a general knowledge of accounts. Salary, 150l. per annum.—Applications, enclosing testimonials of competency, to be sent to the Town Clerk's Office, on or before the 13th day of SEPTEMBER next. Canvassing the members of the Town Council or Local Board of Health, either personally or by letter strictly forbidden, and the doing so to be considered a disqualification for the Office. Further particulars may be obtained on application at the Town Clerk's Office, New-street, Melcombe Regis.
FREDK. CHAS. SIPPGALL, Town Clerk.
Weymouth, 13th August, 1864.

SURVEYOR for the Town of ROCHDALE. WANTED, a person duly qualified to act as LOCAL SURVEYOR of the Paving, Drainage, and other works authorised under the provisions of the Rochdale Improvement Act, 1854, and the several Acts incorporated therewith. He must be thoroughly competent to take levels, make plans and designs, and have knowledge and had experience in the valuation of property. Salary 250l. per annum. Applications, with testimonials, to be sent to my Office, Yorkshire-street, Rochdale, on or before the 1st day of SEPTEMBER next. By order,
ZACH. MELLOR, Town Clerk
Rochdale, 12th August, 1864.

JOHN DOWNEY, Victoria Wharf, Nine Elms, S.
Also Licensed Lighterman, of 11, Millbank-row, S.W.; and Licensed Lighterman and Wharfinger, of Hermitage Steam Wharf, Wapping, E.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

BRICKS.—TO BE SOLD, about 350,000 good BRICKS. Size, 9 inches by 4½ inches, and 3 inches in depth. They can be delivered at any railway station, or into canals. Satisfactory references will be required. Apply to EXECUTORS of late HENRY HUGHES, Beaucamp-villa, Leamington

OATES'S PATENT SOLID BRICK MACHINE.—To CONTRACTORS, BUILDERS, BRICKMAKERS, and OTHERS.—Persons about to establish Brickworks, or to extend or increase their trade, are respectfully requested to thoroughly investigate the above Machine, which may be seen in operation at the undermentioned works. These Machines are guaranteed to produce at the rate of "Thirty Bricks" (and upwards) per minute, sufficiently dense to be wheeled direct from the Machine to the kilns; and, with suitable clay, bricks can be made direct from the mine without any previous preparation.—To view, apply to the Government Docks and Dockyards, Portsmouth; GEORGE SMITH & Co. Contractors, 3, South-street, Grosvenor-square, London; JOHN GRUNDY, Esq. The Dales, Whitefield, Manchester; JOSEPH MARSDEN, Esq. Bolton-le-Moors, Lancashire; Mr. J. WALKER, Contractor, Patent Solid Brickworks, Crewe, Cheshire; Mr. GRADWELL, Hindpool Saw Mills, Barrow-in-Furness, Lancashire; or at the Works of the Scarborough Solid Brick Company, Brettel-lane, near Stourbridge—parties who are working the same, and have kindly consented to give every information.—To treat, or for drawings of same, apply to the Patentee, Mr. J. P. OATES, Erdington, near Birmingham; or to Mr. T. S. CROSS, Sole Agent and General Manager, 46, Leamington-terrace, Ravenhurst street, Birmingham.

TO SCULPTORS, MASONS, BUILDERS, &c.
FABBRICOTTI, BROTHERS, Carrara Wharf, Thames Bank, Pimlico, has ALWAYS ON SALE, a well-selected Stock of Statuary, Vein, Paonazzo (or purple vein), Sicilian, and Dove Marble (the produce of their Quarries at Carrara, Italy); also Bardilla, Black and Gold, Grotte, Breccia, Sienna, St. Ann's, Languedoc Vert des Alpes, Black, &c. &c.; and Alabaster, in Blocks, with slabs of several of those qualities. Also Solid Marble Baths and Mortars, and Vases and Figures, in Statuary and Sicilian, or Gardens and Galleries. Rough Marble and Decorative Sculpture Works supplied by contract.

MANUFACTORY at WALTON STREET.

WEARDE STONE QUARRIES, LIMITED.
The Stone produced from these Quarries has been proved to be the most durable of any in the market, and can be had for Pitching in any sizes; also for Macadamizing. Samples sent, with prices, on application to the Manager, E. M. CROKER, Gunnerslake, Cornwall

LITTLE CASTERTON FREESTONE.
Apply, for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD,
The Owner; and see Specimen at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about 4 feet thick in the bed. It will stand ANY WEATHER, is much used for water works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.
*** The above WEATHER STONE is used largely by London Builders.

RED MANSFIELD STONE, WHITE MANSFIELD STONE,
YELLOW MAGNESIAN or BOLSOVER LIMESTONE
Consigned in railway trucks, direct from the Quarries, in blocks not exceeding twelve tons; or worked at the Quarries and delivered free from injury at any railway station.
Mr ROBERT LINDLEY Mansfield Quarries, Nottinghamshire

TO CONTRACTORS, QUARRY OWNERS, MINERS, &c.
BLAKE'S STONE BREAKER is recommended by the best Engineers in this and other countries to Break Stone of every description, of the best quality for Macadam Roads, Concrete, Ballasting Railways, &c. It takes in large blocks or round boulders, and reduces them to fine road metal, at a cost of from 2d. to 3d. per ton. If your pauper labourer costs 8d. per day, this machine will do more work, and do it better, at 2d.—For circular testimonials, &c. apply to
H. R. MARSDEN,
SOHO FOUNDRY, LEEDS.

SLATES.—JONES & CO. have a STOCK of SLATES of different sorts, from the best quarries in Wales. SLABS and CISTERNS delivered at any station in quantities of not less than five tons, from their depôts,
BANGOR, GARSTON, RAINEY, CHESTER, and GLOUCESTER.
Prices forwarded and estimates given on application.
1, BOLD TERRACE, CHESTER.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand from above or below Bridge, delivered by the yard or per barge. Ballast, screened or unscreened, by the yard or per barge. Stocks, Lime, and Old Bricks. Dry Rubbish delivered, per barge, in any quantity alongside the Thames.

MEDIÆVAL PAPERHANGINGS, from the Thirteenth to the Sixteenth Centuries. Designed by G. T. ROBINSON, F.R.I.B.A. Manufactured by WM. WOOLLAMS & CO. 110, HIGH STREET, near Manchester-square, London, W. May be obtained of the principal Decorators.

Extracts from notices in the undermentioned publications:—

"Conventionalised patterns, often displaying great beauty of form, characterize the examples sent to us. With a few exceptions, the colouring of the specimens is commendable, in many it is worthy of the highest praise."—*Athenæum.*

"The designs are exceedingly elegant, and the colours good and well arranged. Some of the patterns are of strictly ecclesiastical character, suitable for mission churches and oratories, or they may be used as accessories in church decoration."—*Church Builder.*

"The majority of the patterns are exceedingly satisfactory, and not expensive."—*Builder.*

"These designs are infinitely varied, yet always consistent and effective; the colouring is pre-eminently good, both in the selection of tints, and in harmonious combinations, and the quality of the paper is of the highest order."—*Art Journal.*

DESACHY'S FIBROUS PLASTER.
GEORGE JACKSON & SONS,
HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN
DESACHY'S FIBROUS PLASTER,
Beg to call the attention of Architects to its Capabilities.

It is adapted for the speedy and economical production of any coffered or circular work, waggon headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), fluted and plain columns, panelled dados, all kinds of dlsaper, &c ; for the linings of walls and ceilings, and for all purposes of ornamental plaster.

The advantages are great. It is of great lightness and of excellent quality ; it is not inflammable, and is ready to be painted immediately after it is made, it has been used (under the direction of Owen Jones, esq.) for the ceiling of St. James's Hall; at Messrs. Osler's, Oxford-street; Mr. Hancock's, New Bond-street; the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works.

SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London Atmosphere.
ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. We have used under the name of "Improved Zinc Paint," or as the manufacturer Two or three quantities, no workman can produce good work with such material. Workmen who have discovered the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS.—Is cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

NOTICE of REMOVAL.—ATLAS WORKS.
HENRY CLAYTON & CO. To Builders, Dealers in Materials, Livery Stable Keepers, and Others. Twelfth Sale of Building Materials, Pimlico.

MR. GEORGE HAINES will SELL by AUCTION, on the PREMISES, on MONDAY, AUGUST 22, 1864, at TWELVE o'clock, all the capital MATERIALS of SIX DWELLING-HOUSES, Nos. 29, 30, 31, 32, and 33, Upper Eaton-street, with back buildings and erections, and a stable-yard: comprising a large quantity of prime stock brick-work, spacious roofs with sound timbers and slates, parts of the numerous rooms of the usual description, lead and iron work, shop fronts, glazed roof of stable, part flooring, rack, mangers, and folding gates, pebble and other pavement, sound useful timber, and many thousands of superior bricks. Mr. HAINES & SON, Auctioneers, Moorgate-street, City, and at the Auctioneer's Offices, Grosvenor-street West, Eaton-square, and No. 12, High-street, Kensington.

HIGH-STREET, ST. PETER'S, BEDFORD.—To Builders, Contractors, and Others.—Notice of a Succession of Auction Sales.

MR. USHER begs to announce that he is favoured with instructions from Mr. G. H. Miller (who has determined on retiring from business), to dispose of the whole of his BUILDING PLANT STOCK-IN-TRADE, and Effects, by PUBLIC AUCTION: comprising a large quantity of scaffold poles, planks, cords, pulleys, hods, boards, barrows, rails, pulleys, and blocks, saw tackle, jacks, useful building materials, old doors, sashes and frames, centres, scantlings (various), a large quantity of block and other stone, York paving, slate and marble slabs, window and door sills, sink stones, hip stones, drain pipes, symbolos, cement, mouldings, crosses, and mural decorations, fifty marble chimneypieces, tablets, gravestones six hundredweight of vases, various ornaments in statuary adapted for garden decoration; also all the carts, waggons, trucks, cash, horses, harness, and numerous effects, the days of which sale will be given from time to time.—The first sale will be held on MONDAY, AUGUST 22nd 1864.

SOUTH NORWOOD.—First-class Freehold Building Land, in a very healthy and picturesque locality, within five minutes' walk of the North Quay Station, on the London, Brighton, and South Coast Railway, and only a short distance from the Addiscombe Station, on the Mid Kent Railway, affording access to London Bridge, Victoria, Charing Cross, Crystal Palace, &c. at frequent intervals throughout the day.

MESSRS. WINSTANLEY & HORWOOD will offer for SALE by AUCTION, at the GUILDHALL HOTEL, Gresham-street, on TUESDAY, AUGUST 30, in 25 lots, a PORTION of the valuable FREEHOLD PROPERTY, known as Elmore Park. Land tax redeemed, and great part thereof inclosed. Most eligibly situate at Woodside green, in the parish of Croydon, and possessing the important advantage of immediate contiguity to the Norwood Junction Station, with which it is in direct communication by the road now being made over the adjoining lands. The land is approached by eight roads, known as Passenger, Howard, and Elmore roads, admirably adapted for the erection of detached villas or cottage residences, for which there is a great demand in this thriving and rapidly increasing neighbourhood, and is divided into 24 plots of 60 feet each, by a depth of about 200 feet; and two others, of about 300 feet, by a convenient depth. The whole or any two or more of the said lots to be taken at the option of the Purchaser, or if one is already supplied Wood side green Possession may be had on completion of the purchases; and the plots viewed at any time. Particulars, with plans, are being prepared and will be ready for the purpose by the 1st of September next, after which time, further information will be afforded on application to Messrs. DRUMMONDS, ROBINSON, & TILL, Solicitors, Croydon, S.; and Messrs. WINSTANLEY & HORWOOD, Auctioneers, Surveyors, and House Agents, 10, Paternoster-row, St. Paul's, E.C.

CROYDON, SURREY.—Important Freehold Building Land, nearly contiguous to the Addiscombe Railway Station, and within a few minutes' walk of the other Croydon Stations.

MESSRS. BLAKE will SELL by AUCTION, at the GREYHOUND INN, Croydon, on WEDNESDAY, AUGUST 31, at SIX for SEVEN o'clock in the Evening, Eighty Lots of very Eligible BUILDING LAND, being the first portion of the Leale Estate, lying on the northern side of St. James's road East and on the western side of the Birch Lodge Estate. The land is laid out in Lots 1, 2, and 20 to 37 (inclusive), respectively, to contain 40 feet roads, named Alexandra, Albert, and Freemasons roads. The surface is a deep rock of gravel, and sewers and drains are in all the roads, and the water main of the Lodge Estate is in the adjoining high road. In order to preserve the respectability of the neighbourhood, the purchasers will be precisely restricted as to the value of the houses to be erected, and the lines of building frontages to be observed.—Particulars, with plans, may be had fourteen days before the sale at the Greyhound Inn, Croydon; the Leslie Arms, Croydon Common; at Garraway's Coffee-house, Change-alley, Cornhill; of Messrs. DRUMMONDS, ROBINSON, & TILL, Solicitors, Croydon; and of Messrs. BLAKE, Croydon.

CAMDEN TOWN. To Builders, Cabinet makers, and Others.

MESSRS. LEREW & LEREW will SELL by AUCTION, at CAMDEN-TERRACE, near the Camden road Station, on MONDAY, AUGUST 29th, and following day, at TWELVE for ONE, about 18 pair of sashes, deals, and battens, 100 squares flooring, 50 yards wide pine board, 4000 feet mahogany, 2,000 feet oak, beech, and deal trees, 15,000 feet quartering dry cut stuff 30 new doors, 50 scaffold-poles, 10 ladders, builder's cart, horse, and harness, 3 trolleys, also a large quantity of excellent old materials, 4 capital baking ovens, 2 feet 3 inches by 5 feet 1 inch, and useful effects.—Auction Offices, 2, Christopher-street, Hampstead road, near the Euston Station.

CHARING CROSS RAILWAY, CITY TERMINUS.

MESSRS. WILLIS & HARROW are favoured with instructions from the Contractor to SELL by AUCTION, on the PREMISES, on WEDNESDAY, 24th AUGUST, 1864, at TWO o'clock precisely, the SECOND PORTION of the well-seasoned STOCK, consisting of Spanish and Honduras Mahogany, planks and battens, Dantzic and Memel yellow deal, Archangel and Riga ditto, oak, teak, and pine planks, and part of English, Italian, and Polish timber, about 1,000 feet of cedar plank and boards, 50 feet of dry wainscot, 7 squares of prime yellow flooring boards, and yellow deal and battens, also 1 capital lever planer, &c. &c. To be viewed one day prior and morning of Sale. Catalogues to be had at the Place of Sale, and of the Auctioneers, 2, Billiter-street, E.C.

MANUFACTURING WATERSIDE PREMISES, Millwall, Poplar, on the banks of the Thames, with possession.

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, on TUESDAY, AUGUST 23rd, at TWELVE o'clock precisely, on the PREMISES, Millwall, Poplar, the valuable LEASE of extensive MANUFACTURING PREMISES, containing a superficial area of about 1a. 0r. 9p. with a frontage of 120 feet next the Thames. There is a wharf, brick and timber-built factory 88 feet by 70 feet, with two chimney shafts, cooling-room laboratory, counting house, and yard, with well affording a supply of water. BISCHOFF, COXE, & BOMPAS, Solicitors, 19, Coleman-street, E.C.; and of Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

TO MANUFACTURING CHEMISTS AND OTHERS.

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, on TUESDAY, 23rd AUGUST, at TWELVE o'clock precisely, on the PREMISES, Ferry-road West, Millwall, unless previously sold by Private Contract, the PLANT and UTENSILS of the CHEMICAL WORKS, comprising two pairs 10-horse power high pressure horizontal steam engines, wrought-iron Cornish boiler, 18 feet 6 inches long, 6 feet diameter; waggon ditto, 13 feet long by 5 feet and 6 feet deep; three hydraulic presses, with 8-inch and 12-inch ram, set of four plunger pumps, barrel force, and lift pumps; three cylinder cast-iron tanks, of 5 feet diameter; wrought and cast-iron tanks and pans; four wrought-iron mixing cylinders, nine iron-bound coolers, gas receiver, iron shafting, fit cisterns, refrigerator, cisterns and moulds, crushing mill, cast-iron retorts, forge and bellows, crab crane, office fittings, erection of lime kiln and chalk enclosure, and numerous other effects.—May be viewed the day preceding; when catalogues may be had on the Premises; of Messrs. BISCHOFF, COXE, & BOMPAS, Solicitors, 19, Coleman-street, E.C.; and of Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

UPPER TOOTING, near Balham and Wandsworth Common, Surrey. Valuable Freehold Property; comprising a detached Residence, with Offices, Gardens, and Paddocks, available for building purposes.

MESSRS. NORTON, HOGGART, & TRIST have received instructions from the Executors of the late H. H. Mortimer, Esq. to offer for SALE, at the Guildhall Coffee House, near Guildhall, in the City of London, on WEDNESDAY, AUGUST 24, at ONE o'clock precisely (unless previously disposed of by private contract), a valuable FREEHOLD RESIDENCE, known as Warren House, for many years in the occupation of the late owner, pleasantly situate adjoining the property of — Bell, Esq. at Upper Tooting, in the parish of Streatham, Surrey, about a mile from the Balham Station on the Crystal Palace Railway, and within easy access of all parts of the metropolis. It is detached and approached from the high road by a carriage drive through a lawn, and contains excellent accommodation for a moderate-sized family, with stabling, coach-house, and other offices, and productive kitchen gardens, with an abundance of fruit trees in full bearing, and rich paddocks, extending to the private road in the rear, leading to Wandsworth Common; the whole containing about four acres. A more detailed advertisement will appear shortly, when particulars may be had of JOHN MORTIMER, Esq. Solicitor, 17, Clifford's-inn, W.C.; at the Guildhall Coffee House; and of Messrs. NORTON, HOGGART, & TRIST, No. 62, Old Broad-street, E.C.

WOOD GREEN, TOTTENHAM. Valuable Freehold Building Land, in lots to suit purchasers.

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer for SALE, at the GUILDHALL COFFEE HOUSE, near Guildhall, in the City of London, on WEDNESDAY, 24th AUGUST, at ONE o'clock precisely, about 28 acres of very valuable FREEHOLD LAND, available for building purposes, situate on White Hart Lane and Wood's lane, leading from the Green Lanes to Tottenham, about ten minutes' walk from the Wood-green Station on the Great Northern Railway, within an easy distance of Alexandra Park, about six miles from the metropolis, and eligible for the erection of villa residences.—May be viewed, and particulars, with plans, had of the Jolly Butchers, Green Lanes, Tottenham; at the Guildhall Coffee-house; and of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad-street, Royal Exchange.

WESTMINSTER BRIDGE APPROACHES.—Ninth Sale of Building Materials.

MESSRS. GLASIER & SONS are favoured with instructions from the Commissioners of her Majesty's Works and Public Buildings to SELL by AUCTION, on the PREMISES, on TUESDAY, SEPTEMBER 6th, at TWELVE for ONE, the valuable BUILDING MATERIALS, FIXTURES, and FITTINGS of Five Houses, being No. 1, New Palace-yard, 2 and 3, Parliament-street, and 14 and 15, Bridge-street, Westminster (part known as Parliament Hotel), comprising about 60 squares slating, and ridge, &c. slates, pan and plain tiles, sound timber in roofs, floors, &c. flooring, wainscoting, doors, sashes and frames, plate glass shop fronts and shutters, bar and counter fittings, iron pillars, cast-iron girder, staircase, and iron chimney-pieces and hearths, register and other stoves, range, water-closet apparatus, pewter, copper, sinks, lead in gutters, pipes, &c. and the buildings have been recently painted throughout, comfort, grates, brass and copper taps, and a great variety of other fittings of bar, capital York landings and baskets, gas fittings &c. May be viewed the day prior and morning of sale, and catalogues had at the Office of Works, 12, Whitehall-place; of JAMES PENNETHORNE, Esq. 7, Whitehall-yard; on the Premises; at Garraway's; and of the Auctioneers, 41, Charing-cross, S.W.

To Builders, Contractors, Ironmongers, and Others.—Genuine Stock in Trade of an Ironmonger removed from Norwich, and sixty-two Cart Loads from Hatfield.

MR. W. H. BETTS (Auctioneer and Valuer to the Ironmongery and Metal Trades) will SELL by AUCTION, at Messrs. COWLAND'S ROOMS, 74, Minories-street, City, very near the Tower, on THURSDAY, AUGUST 25, at TWELVE o'clock, about 2 tons cut and wrought Nails, 4,700 gross Screws, 240 dozen Locks, 470 dozen tower and other bolts; brass goods of every description, iron bedsteads, shop fittings, &c. and an immense assortment of FURNISHING IRONMONGERY.—Catalogues at the Auctioneer's Offices, 63 Leadenhall-street, City.

BUILDING GROUND.—TO BE LET, from Michaelmas next, a valuable PLOT of GROUND, adjoining the London, Brighton, and South Coast Railway Station, with a frontage of 80 feet to the Lea Bridge-road, the total area being five acres and a half.—For further particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

WATERSIDE PREMISES, City-road.—Messrs. FULLER & HORSEY are instructed to LET, on LEASE, from Michaelmas next, extensive WATERSIDE PREMISES, occupying a site of 21,000 superficial feet, situate on the Wenlock Basin, City-road, and comprising a spacious and substantial modern brick built manufactory of two floors, engine and boiler-houses, with 50 horse power steam-engine and three Cornish boilers, range of brick-built offices, and paved yards with gateway entrances. There is a water frontage of about 207 feet.—For further particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

FREEHOLD LAND TO BE SOLD or LET on BUILDING LEASES, in Glengall-road, Old Kent-road.

AND ALSO near Forest-hill Station.

ALSO FREEHOLD WHARF on the Surrey Canal, near Old Kent-road.—Apply to Mr. MAY, Acorn Timber Wharf, Old Kent-road.

SURBITON.—TO BE LET, on Building Leases, LAND within five minutes' walk of the Station, and close to the River, for HOUSES of not less than 80l. a year rent. If desired, a portion of the money required will be advanced.—Inquire of Mr. MODIS, Victoria-terrace, Surbiton.

FREEHOLD BUILDING LAND TO BE LET, at Chislehurst, Kent, on long lease, at moderate ground-rents, suitable for villas, cottages, and shops. There being a great want of smaller dwellings, they would let immediately, and the site offer a good investment. Also, LAND suitable for first class residences, commanding magnificent views, all within easy access to rail for City and West End. The situation is celebrated for pure air and water, is high and dry, rich soil, and not to be surpassed in picturesque beauty.—Apply to Mr. F. THORNE, 4, Corbett-court, City; and Rose bank, Lee-road, Lee, S.E.

TO BE LET, Large and Valuable PREMISES, with water communication, one mile north from the Bank. Formerly occupied by a mahogany merchant, who realized a large fortune there.—Apply to E. & W. STURGE, Bridge Wharf, City-road, E.C.

FREEHOLD LAND TO BE LET, on Building Leases, at low ground-rents, on the estate of the Carpenters' Company, at Stratford, Essex, close to the Station on the High street; one portion with river frontage, for the erection of manufactories, and another for small houses or cottages.—For plans and particulars, apply at the Clerk's Office, Carpenters' Hall, London wall.

BLACKHEATH.—A Gentleman is desirous of DISPOSING of PLOTS of FREEHOLD and LEASEHOLD LAND, forming eligible sites for private residences, and being within three minutes' walk of the railway station. For terms and particulars, address, Mr. F. F. THORNE, Architect and Surveyor, 4, Corbett-court, Gracechurch-street, and Lee, Kent.

TWICKENHAM PARK near RICHMOND.—Most Eligible BUILDING LAND TO BE LET on Lease, for Ninety-nine Years, in Large or Small Plots. Money advanced, if required. For particulars, apply to W. BACKHURST, at the Estate Office, Twickenham Park; or EDWARD GUILLAUME, Esq. 14, Gower-street, Bedford-square, Bloomsbury, London.

BUILDING LAND TO BE LET, situate at Vauxhall, Lewisham, and Camberwell.—For particulars apply to Messrs. DRIVER & CO. 4, Whitehall, London, S.W.

FOREST HILL.—BUILDING LAND TO LET on this hill, commanding extensive views.—Apply to A. B. 192 Bermondsey-street, S.E.

NEWLY and most substantially erected WAREHOUSES and LAND, occupying an area of nearly half an acre near the entrance of the London Docks, well adapted for a timber yard. TO BE LET on LEASE, or the Freehold to be sold.—Apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception rooms, two being 24 feet in length; eleven best bedrooms; stabling for eight horses and coach-houses for four carriages; suitable and extensive ornamental grounds, with greenhouses, in all 28 acres; gravelly soil; near Buninigdale Station, South-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the West End Station.—Apply to J. BOWEN MAY, Esq. Solicitor, 67, Russell-square.

WHARF TO BE LET on LEASE, or SOLD, near Victoria Station, Pimlico, suitable for a marble or stone merchant, with offices, landing cranes, and trackway.—Apply to PULLEN, HORNE, & CO. 40, Parliament street, Westminster.

BUILDING GROUND TO BE LET by TENDER.—High Road, Lewisham. Land-tax redeemed. A PLOT of GROUND, 82 feet by the erection of Four Houses fronting the High Road. Frontage about 88 feet; average depth 150 feet. Term of years 81. One year's purchase rent. Within three minutes' walk of the Ladywell Station. Sealed Tenders, stating amount of ground-rent, description and value of each house, to be delivered on or before the 31st day of AUGUST, 1864, at Leathersellers' Hall, St. Helen's-place, E.C.

WHARF TO BE LET, on the Regent's Canal, with good frontage, and in good situation, near Hackney Great, Forty Gutteat.—Address, F. S. Post office, Mare street, Hackney.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament, 1856), 14, RUSSELL STREET, COVENT GARDEN, W.C. Also on terms by which the borrower by small Leasehold Property, for any term not less than seven years, may effect a Mortgage repayable by the same instalments as he pays his rent. Parties desirous of realizing the houses they occupy, and thereby saving the payment of the advance of rent, direct from vantages are offered. Borrowers can in build themselves, have long or short terms to suit their convenience, and no delay from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.

EDWARD HARPER, Secretary.

ANNUAL EXHIBITION of STAINED GLASS at the SOUTH KENSINGTON MUSEUM, MAY, 1865.

The Lords of the Committee of Privy Council on Education have placed at the disposal of the producers of Stained Glass in the United Kingdom a space in the South Kensington Museum for the Exhibition of Stained Glass, of a highly artistic character, in the year 1865. For the most part the space will be the same as this year.

Applications for space and particulars to be made on or before the 31st OCTOBER, 1864, addressed to the Secretary, Science and Art Department, South Kensington Museum, W.

By order of the Lords of the Committee of Privy Council on Education.

ARCHITECTURAL DRAWING CLASSES, for Architects, Builders' Sons, Assistants, &c.—Conducted by Mr. T. J. HILL, Architect, for giving Day Instruction in Architectural, Perspective, Isometrical, and Geometrical Drawing; making Finished and Working Drawings, preparing Specifications, taking out Quantities, estimating Builders' Work, &c. Terms, Three Guineas per quarter.—Prospectuses and full particulars may be had at the Offices, 76, Old-street, City-road.

BILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow an Interest in the same, and have considerably reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new buildings.—For prices, apply to the Manager, Mr TYLER, 12, Abingdon-street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

BY Order of the Secretary of State for India in Council.—NOTICE is hereby given, that TWENTY-FIVE APPOINTMENTS in the Upper Class of the ELECTRIC TELEGRAPH DEPARTMENT in INDIA will, in the year 1865, be open to PUBLIC COMPETITION.

A COMPETITIVE EXAMINATION will, accordingly, be held in this Office in the month of MAY next.—Full printed particulars of the conditions on which candidates will be admitted to the examination, and also respecting the nature of the appointments to be competed for, may be obtained at the Office, on application, either personally or by letter, addressed to the "Under Secretary of State for India," India Office, London, S.W.

India Office, 1st July, 1864.

THE Secretary of State for War is desirous of receiving COMMUNICATIONS from GUNMAKERS and OTHERS on the subject of the best means of CONVERTING the ENFIELD RIFLE into a BREACH-LOADER, under the following conditions:—

1st. Cost not to exceed 1*l*. per arm.

2nd. Shooting of the converted arm not to be inferior to that of the unaltered arm.

Descriptions of methods proposed, accompanied by specimen arms, should be sent to the Director of Ordnance, War-Office, Pall-mall, on or before SEPTEMBER 21.

These descriptions and specimens will then be considered by the Ordnance Select Committee, who will select such of the plans as appear to them *primâ facie* promising

Six rifles will be delivered for conversion to each of those gentlemen whose plans have been selected, as above.

They must be returned, altered, within five weeks of the date upon which they are sent, accompanied by 1,000 rounds of such ammunition, to be ignited in such manner as the competitors think most suitable.

A sum of 20*l*. will be paid to each of the selected competitors to cover the expense of converting the six rifles, and of the supply of ammunition required.

J. ST. GEORGE, Director of Ordnance.

War Office, August 23, 1864.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72—74, Bishopsgate street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Cooking Utensils, &c. to meet the great public demand; and also for the consequent more extensive execution of all descriptions of hot water bath, laundry, and steam work.

72 74, Bishopsgate street Within.

COMPETITIONS.

TO ARCHITECTS.—COMPETITION DESIGNS for ST. JAMES'S CHURCH, Waterloo-street, Little Bolton.—The Charitable Trustees, under the will of the late John Barrow, esq. are desirous of obtaining DESIGNS, &c. for a CHURCH, to be erected on land belonging to them in Waterloo street, Little Bolton. The land for the site forms a parallelogram of 82½ yards long, by 44 yards wide, and contains (including one half of Water-loo street, of 14 yards wide, and the half of three other streets of 12 yards wide, each running along the other three sides of the land) 2,750 superficial square yards. The frontage to Waterloo street, which runs nearly east and west, is 82½ yards. It is desired that the Church shall afford comfortable sitting accommodation for 1,000 persons, and that the outlay shall not exceed 5,000*l*. The plans to be drawn in line only, to a scale of 10 feet to 1 inch. Each set of designs to comprise plan, interior, exterior, and sectional elevations, and perspective view, with the estimated cost of construction and completion of the design, exclusive of the land, but inclusive of all interior fittings and work. The designs to be forwarded to the Rev HENRY POWELL, Vicar of Bolton under motto or cypher only, accompanied by a sealed letter, containing the real name and address of the person furnishing the designs, on or before the 30th SEPTEMBER, 1864. A premium of 50*l*. will be given to the person whose design the Trustees shall deem the best, and such design shall be the property of the Trustees, who shall not be bound to employ the successful person as architect, though they will be disposed to treat with him for the purpose. The unsuccessful designs will be returned to the addresses of the respective owners, by the usual modes of conveyance; but the Trustees will not be responsible for their safe delivery, nor for any payment to the owners in respect of such plans, or of the adoption of any part of them in the erection of the Church.—Further particulars may be obtained from the Rev. HENRY POWELL, Vicar of Bolton; JOHN HICK, Esq.; or THOMAS LEVER RUSHTON, Esq. three of the Charitable Trustees under the will of the late John Barrow, esq. deceased.

TO ARCHITECTS.—The SIR TATTON SYKES MEMORIAL.—The Committee for the Erection of a Memorial to the late Sir Tatton Sykes, Bart. are prepared to receive DESIGNS and ESTIMATES for the ERECTION of an OBELISK or COLUMN, on an elevated site on the Sledmere Estate, on the Yorkshire Wolds near Driffield. Designs and Estimates to be sent to the Honorary Secretaries, on or before the 1st day of OCTOBER next. Twenty pounds will be given for the design considered the most suitable by the Committee, and ten pounds for the second-best design.—Particulars to be had on application to

WM. TOPHAM, } Hon. Secs.
Driffield, 1st August, 1864. F. C. MATTHEWS, }

THE Town Council of Funchal, Island of Madeira, solicit PLANS and ESTIMATES for a BUILDING adapted to the following named purposes, viz.: Town-hall, Assize and Law Courts, Police and Local Tax Offices, &c. The cost of the entire building or buildings not to exceed 8,000*l*. sterling. FIFTY POUNDS will be paid for the most approved plan, and FIFTEEN POUNDS for the next approved. The unapproved plans will be returned. A ground-plan of the site, already prepared for the building or buildings can be seen, and further particulars may be obtained on application at the Town Council Offices in Funchal, Lisbon, and Porto; or to C. R. BLANDY, 2, Crutched-friars, London, E.C.; GEORGE BOLDORINI, 19, Rue d'Hauteville, Paris; the BARON CONCEICAO, Walnut-street, Philadelphia. The plans and estimates to be delivered in London, Paris, or Philadelphia, on or before NOVEMBER 5th, 1864.

BOROUGH of BOLTON. — COMPETITION PLANS for NEW TOWN HALL.—To ARCHITECTS &c. &c.—The Bolton Corporation purpose ERECTING in the Borough a TOWN HALL, covering an area of about 4,300 square yards, and are desirous of obtaining Plans, Sections, and Working Drawings for same. Premiums will be given as follows, viz. 200*l*. for the best, 50*l*. for the second best, and 40*l*. for the third best design, in the opinion of the Council; but the Corporation will not be responsible for any payment for unsuccessful designs. The plans of the three successful competitors to be the property of the Corporation. Applications to be made to Mr. HAYLES, the Borough Surveyor, who will show the ground, and give any further information on the subject. The Designs must be sent in, under seal, with a signature, with a private mark or motto, and a letter accompanying them, also under seal, containing the corresponding mark or motto, and the designer's name and address. They must be addressed to the Town Clerk, and delivered in on or before the 1st DECEMBER, 1864.

ROBT. G. HINNELL, Town Clerk.

Bolton, 11th August, 1864.

CONTRACTS.

Parties desiring to Tender for these Works, must leave their names at this Office, on or before the 3rd SEPTEMBER next, and pay the sum of 10*s*. for the bills of quantities, which will be forwarded to each party as soon as prepared by the War Department Surveyor

The Secretary of State for War does not bind himself to accept the lowest or any Tender

Royal Engineer Office, Sheerness,
17th August, 1864.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of a VILLA RESIDENCE at Chertsey, are informed that the plans and specification may be seen at my Office from the 24th to the 30th instant, and at the Crown Brewery Office, Chertsey, from the 31st instant to the 4th proximo. Sealed Tenders to be sent in not later than the 5th of SEPTEMBER, to H. WETTON, Esq., Chertsey, Surrey. The lowest Tender not necessarily accepted. T. WONNACOTT, Architect.

Farnham, Surrey, August 20, 1864.

TO SEWER CONTRACTORS.—The Board of Works for the Fulham District, in the County of Middlesex, hereby give notice that they will be ready at the Board Meeting, to be held at Broadway House, Hammersmith, on WEDNESDAY, the 7th day of SEPTEMBER, 1864, at TEN o'clock precisely, to receive sealed TENDERS from parties who may be willing to contract for the LAYING DOWN, CONSTRUCTING, and completely FINISHING certain intended BRICK SEWERS, viz.:—A sewer across Brook green, about 2,220 feet in length; another sewer, in King-street East, about 2,240 feet in length, both in the Parish of Hammersmith; and another sewer in Parish's Green-lane, Fulham, about 1,200 feet in length, connected with about 1,800 feet of pipe sewer. Plans, specifications, and detail drawings of the works can be seen and examined, and the form of Tender may, with other particulars, be obtained at Broadway House, Hammersmith, between the hours of TEN and FOUR on and after MONDAY, the 22nd of AUGUST, 1864, previously to the 6th day of SEPTEMBER next. The Tenders must be in separate envelopes, and sent in sealed, addressed to the Chairman of the Board, on or before TEN o'clock of the said 7th day of SEPTEMBER, marked on the outside, "Tender for Sewers," and the party whose Tender may be accepted will be required to enter into a contract and bond, with two sufficient sureties for the due performance of the undertaking; such contract and bond to be prepared by the Solicitor to the Board, at the expense of the contractor. The Board does not pledge itself to accept the lowest or any Tender. By order, W. LOVELY, Clerk.

THE Board of Guardians of St. Matthew, Bethnal-green, are willing to receive TENDERS for the ERECTION of BOARD ROOM and OFFICES at their Premises, Waterloo-road, Bethnal-green, from the designs of their Architect E. N. CLIFFORD, 7, East India-avenue, Leadenhall street, E.C. Copies of the quantities may be obtained of Messrs. WILLIAMS & SHOFIELD, 12, Montague street, Russell-square, W.C. The Board do not bind themselves to accept the lowest Tender, and will require the Builder whose Tender is accepted to give the names of two sureties to be bound formally with himself in the sum of 1,000*l*. for the due execution of the works. Tenders to be delivered at the Office of W. T. HOWARD, Esq. Clerk to the Board, Waterloo-road, Bethnal-green, before SIX o'clock, p.m. on MONDAY, the 12th of SEPTEMBER next, and personal attendance will be necessary at the Board on TUESDAY, SEPTEMBER 13, the following day, at FOUR o'clock precisely.

TO CONTRACTORS and FINANCIAL ASSOCIATIONS.—WEST GRINSTEAD, CUCKFIELD, and HAYWARD'S HEATH RAILWAY COMPANY.—The Directors of this Company are prepared to receive PROPOSALS for the CONSTRUCTION of the above RAILWAY in two sections: No. 1 from Haywards Heath to Rolvenden, and No. 2, from Bolney to West Grinstead (five miles). The Brighton Company have agreed to work the line, and the plans and sections can be inspected and further information can be obtained, from J. H. TOLME, Esq. the Engineer to the Company, 19, Duke-street, Westminster; of G. T. PORTER, Esq. 4, Victoria-street, Westminster; or of the Secretary. Proposals in writing, stating full particulars, must be sent to me on or before the 8th of SEPTEMBER next. EDWARD WAUGH, Secretary.

Cuckfield, 24th August, 1864.

[*For remainder of Contracts see next Page.*

BIRKENHEAD INDUSTRIAL SCHOOLS (ALBERT MEMORIAL).—TO BUILDERS. Persons desirous of TENDERING for the above SCHOOLS, may inspect the plans and specifications at Isleham, corner of the Quadrangles, at the Offices of Mr. DAVID WALLER, Architect, 69, Lord-street, Liverpool, on and after TUESDAY, 23rd inst. Tenders to be left at the time fixed, to be delivered at the Architect's Offices, at the Town Hall, Birkenhead, before Noon, on TUESDAY, the 27th inst., when they will be publicly opened. Security will be required for the due performance of the contract; and the Committee do not bind themselves to accept the lowest or any Tender.

Aug. 19, 1864. WILLIAM JACKSON, Hon. Sec.

BIRKENHEAD UNION.—The Guardians of the Poor of the Birkenhead Union in the County of Chester, are prepared to receive TENDERS for the ERECTION and COMPLETION of a HOSPITAL, to be built on the premises in connexion with the new Workhouse at Higher Tranmere. Separate and distinct Tenders will be required for the execution of the Works, namely, 1st, for the excavation of that part of the said premises, marked No. 1 on the Plan, for the erection of the Works as detailed in the specification marked No. 2—Persons desirous of Tendering are informed that the said excavation may be let, if desired, to the Contractor for the Boundary Wall, carried on contemporaneously with the Contractor will, for this purpose, be required to prosecute the last during the summer, so that the bricks may be taken from it, and the buildings proceeded with early in the ensuing spring.—2, for the erection of the said premises to extend only to the first portion before the month of April next; the second portion of the building to be constructed as soon afterwards as the Guardians may require. The Drawings and Specifications may be seen, and further information obtained, at the Office of Mr. HARRY LANGLEY, Architect, 19, North John-street, Liverpool. Sealed Tenders to be delivered, at my Office, 11, Castle-street, Birkenhead, not later than TWELVE o'clock, on the forenoon of FRIDAY, the 23rd day of SEPTEMBER next. The Guardians do not bind themselves to accept the lowest or any Tender.

PETER GREGORY, Clerk.

60, Lord-street, Birkenhead, 17th August, 1864.

BUILDING of ST. FINBAR'S CATHEDRAL, CORK.—Builders desirous of TENDERING for the above BUILDING are invited to send in their respective Architect's Estimates on or before the 1st day of SEPTEMBER next. The quantities will comprise every item, as soon after as possible. A fortnight will be allowed to the Builders for taking out, after which time the drawings, specifications, and forms of Contract for execution of the Cathedral Committee rooms, Cork, and at the Office of the Architect Mr. W. DOBSON, 1, Adam's place, Strand, London. The Committee do not hold themselves bound to accept the lowest or any Tender.

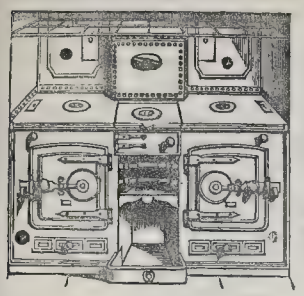
S. FOUNTNEY SMITH, Architect.

TO BUILDERS and CONTRACTORS.—The Committee for the Restoration and Enlargement of the Parish Church of Hartlepool, are about to invite TENDERS for the WORKS required to be done. The drawings and specification will be open for inspection, between the hours of TEN and SIX, at Walton House Drapery Establishment, Hartlepool. Tenders for the works to be received on or before the 10TH OCTOBER next, addressed to the Rev. HENRY EDWARDS, Hartlepool. The Committee do not bind themselves to accept the lowest or any Tender.

S. FOUNTNEY SMITH, Architect.

TO ENGINEERS, MILLWRIGHTS, and others.—The Commercial Dock and Grain Surrey Docks and Canal Companies being about to construct a connecting communication between the Commercial Docks, No. 5, and the Grand Surrey Upper Dock, at Redriffe-lee, are prepared to receive TENDERS for the CONSTRUCTION OF TWO PAIRS of GATES, a WROUGHT IRON BALANCE BRIDGE, the MACHINERY, SLUICES, &c., connected therewith. The gates are to be constructed, erected, and completed in accordance with the plans, specifications, and conditions of contract, that may be seen at the Commercial Dock Office, Deptford Pier, before Noon on TUESDAY, the 23rd of SEPTEMBER inst. (Professional assistance will be required on the part of the Tenderers, which will be supplied by the Company's Engineer, if desired, on their application.) Tenders to be delivered on the printed form, which will be supplied to intending Tenderers at the Secretary's Office, Commercial Dock Office, Deptford Pier, before Noon, on the 23rd of SEPTEMBER inst. (Parties tendering must be present at the opening of the Tenders.) Tenders to be addressed, under cover, to the Secretaries of the Commercial and Grand Surrey Docks and Canal Companies, endorsed "Tenders for New Works," and delivered at the Office of the Company, No. 4, Copthall Buildings, Finsbury-circus, not later than Noon, on TUESDAY, the 27TH SEPTEMBER. Any further information may be obtained on application in writing to the Engineers, Messrs. McCLEAN & STILEMAN, 26, Great George-street, Westminster. The Directors do not bind themselves to accept the lowest or any Tender.—By order,

J. GRIFFIN,
G. W. HEISCH, } Secretaries.



TO CONTRACTORS.—The Commercial Dock and Grand Surrey Docks and Canal Companies being about to construct a dock between the Commercial Docks, No. 5 and the Grand Surrey Upper Dock at Rotherhithe, are prepared to receive TENDERS for the WORKS. The plans, specifications, and draft contract may be seen at the Offices of the Commercial Docks Company, 109, Fenchurch-street, from AUGUST 22nd to SEPTEMBER 12th (Sundays excepted). Tenders to be delivered on the printed form, which will be supplied to intending Tenderers at the Secretary's Office, Commercial Dock Office, Deptford Pier, before Noon, on the 12th of SEPTEMBER inst. (Parties tendering must be present at the opening of the Tenders.) Tenders to be addressed, under cover, to the Secretaries of the Commercial and Grand Surrey Docks and Canal Companies, endorsed "Tenders for New Works," and delivered at the Office of the Company, No. 4, Copthall Buildings, Finsbury-circus, not later than Noon, on TUESDAY, the 27TH SEPTEMBER. Any further information may be obtained on application in writing to the Engineers, Messrs. McCLEAN & STILEMAN, 26, Great George-street, Westminster. The Directors do not bind themselves to accept the lowest or any Tender.—By order,

J. GRIFFIN,
G. W. HEISCH, } Secretaries.

LONDON and NORTH-WESTERN RAILWAY.—To CONTRACTORS and BUILDERS.—The Directors are desirous of receiving TENDERS for the ERECTION of a BRIDGE over the Canal at Waverton Station, in the County of Chester, and for the Enclosure Cattle Sheds at the same Station.—Parties desirous of Tendering may see the Drawings and obtain a Specification of the required Works upon application to Mr. WILLIAM BARNES, Engineer's Office, Euston Station, on and after WEDNESDAY, 31st inst., and Tenders must be delivered at the said Office on or before WEDNESDAY, the 7th day of SEPTEMBER next. The lowest or any Tender not necessarily accepted.—By order, HENRY OAKLEY, Secretary.

Euston Station, August 23rd, 1864.

BOARD of WORKS for the LIMEHOUSE DISTRICT.—CONTRACT for WATERING, SCAVENGING, and the LAMPLIGHT of the DIST. for the ensuing year, and the Week Contract for Watering, Scavenging, and the Removal of Dust.—TENDERS for WATERING the ROADS and SCAVENGING the same, for one Month, or Week, if dust in the intervening Months be required. Tenders for Watering, Scavenging, and the Removal of Dust, and for Lamplighting, for one year from the 29th of SEPTEMBER next. The Board will not be bound to accept the lowest or any Tender. Sealed Tenders, addressed to the Chairman of the Board, at the Vestry Hall, Limehouse, and endorsed "Tender for Watering, Scavenging, and the Removal of Dust," and "Tender for Lamplighting," must be delivered at the said Office not later than TWELVE o'clock on MONDAY, the 12th day of SEPTEMBER, 1864; and each Tender must be accompanied by the Name of the Surety or Sureties proposed for the due performance of the Contract. Tenders must be delivered in the Forms to be had of the Clerk, at the said Office, and not otherwise. The Board do not bind themselves to accept the lowest or any Tender. The Sureties must be approved by the Board, and enter into the usual Bond. Any Tender not accompanied by the Name of the Surety or Sureties will be rejected. The Contract will be subject to the Approval of the Metropolitan Board of Works. Any Tender may be withdrawn before the Meeting of the Board, at which it is to be considered. Any Tender not delivered in the Form, and at the Time and Place required, will be rejected. Any Tender containing any Qualification, Condition, or Reservation, will be rejected. Any Tender containing any Erasure or Alteration, not attested by the Signature of the Person tendering, will be rejected. Any Tender containing any Figure or Word illegibly written, will be rejected. Any Tender containing any Error in Figures, will be rejected. Any Tender containing any Error in Spelling, will be rejected. Any Tender containing any Error in Spelling, will be rejected. Any Tender containing any Error in Spelling

ELECTRIC BELLS FOR DOMESTIC USE.

BREGUET'S PATENT INDICATOR SYSTEM, the same as in use at the Grand Hotel, Boulevard des Capucines, Jockey Club, &c. Paris.

The superiority of Electric Bells is already settled in America and in France. For all modern works at Paris they have as effectually superseded the old crank and pull plan as, for travelling, the railway has superseded the antiquated stage-coach.

ADAMS & SON have much pleasure in stating that they have made arrangements with Messrs. Breguet, of Paris, to become their sole Agents for the sale and fixing of their Patented Apparatus upon the "indicator system," which has great advantages over all others, and is especially adapted for hotels, public buildings, and other large establishments. The details of this ingenious instrument, together with a description of the various apparatus in use for Electric Bells, may be had upon application, or by post.

WROUGHT IRON WINE BINS.

FARROW & JACKSON

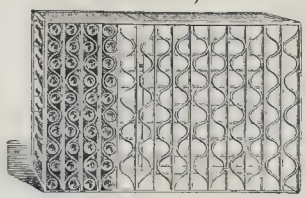
Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING nearly FORTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.

ALSO THEIR



NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with

SEPARATE REST FOR EACH BOTTLE,

Peculiarly adapted for Private Cellars.

No laths are required, and all trouble of Binning is avoided. The Cellular Bins may also be had fitted with light lattice doors, affording perfect security to the contents o the Bin.

WHOLESALE IRONMONGERS,

13, KING STREET, SNOW HILL, LONDON.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundreds without one single failure. It is applicable to all Locks and Latches, and, when fitted, and effects a most secure fastening, will not unscrew in the lock if the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich Designs in Glass, China, Brass, Bronzed, Gilt, Carved Woods, Inlaid, &c. &c. or to any Design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of Locks, Latches, Brass Foundry, and Ironmongery, required for Buildings, of the best quality manufactured, at the lowest wholesale prices.

*** Illustrations and Particulars sent on application.

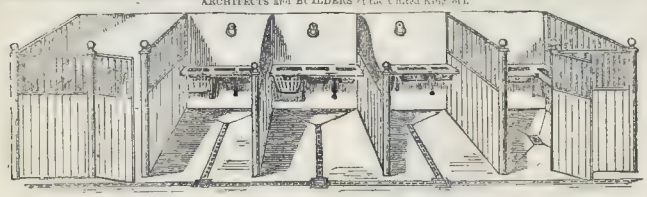
MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of first class in the Exhibition.

They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London Architects, noted for employing only what is the best of its kind.

Musgrave's Patent Slow-combustion Stove



Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 2d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES.

BARTON'S PATENT PRIZE MEDAL STABLE FITTINGS.

These SUPERIOR CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES.

J. BARTON, having entered upon the extensive Premises, No. 370, Oxford-street, adjoining his Patent Stable Fitting Manufactory, begs to solicit attention to his large and well-selected STOCK of STALL and LOOSE BOX FITTINGS, HARNESS ROOM REQUISITES, &c.; also to invite inspection of the newly-erected Practical Stable, now on view. Illustrated Catalogues on receipt of Four Stamps.

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

THE FURNISHING OF BED-ROOMS.

HEAL & SON have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed-room Furniture than is usually displayed, and that to give the property of the style and effect of the different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large and additional Show-rooms, by which they are enabled not only to extend their Stock of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete suites of Bed-room Furniture in the different styles.

Japanned Deal Goods may be seen in complete suites of five or six different colours, some of them light and ornamental, and others of a plainer description. Suites of Stained Deal Gothic Furniture, Polished Deal, Oak, and Walnut, are also set apart in separate rooms, so that clients are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.

Bed Furniture is fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.

A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.

The Stock of Mahogany Goods for the better Bed-rooms, and Japanned Goods for plain and servants' use, is very greatly increased. The entire Stock is arranged in eight rooms, six galleries (each 120 feet long), and two large ground floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.

Every attention is paid to the manufacture of the Cabinet work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their own immediate care.

Their Bedding trade receives their constant and personal attention, every article being made on the premises.

They particularly call attention to their Patent Spring Mattress, the Stuffing of Elastic Pastil. It is portable, durable, and elastic, and lower in price than the old Spring Mattress.

HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free by Post.—196, 197, 198, Tottenham-court-road, London.

TO BUILDERS, PLUMBERS, AND CONTRACTORS.

LEAD MERCHANT, Brass Founder, and Manufacturer of Water Closets. Water-closets fitted with Underhay's Patent Regulator and Supply Valve. WHITELEAD WORKS LIMEHOUSE, LONDON E.

PATENT WORCESTERSHIRE RANGE

PRIZE MEDAL 1862. AWARDED FOR EXCELLENCE.
The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.
It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.
Extracted from the "London Daily Telegraph," May 19th, 1862.
"INTERNATIONAL EXHIBITION, Class 31.
"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Ranges is the placing of the OVEN and ROASTER one above the other instead of side by side; and, as ROASTER is constantly replenished with fresh air."
INVENTORS AND MANUFACTURERS,
JONES & ROWE, WORCESTER,
AGENTS FOR LONDON: BARRON, SON, & WILSON
436, STRAND, W.C.
Illustrated Catalogues, with Testimonials and Prices, forwarded on application.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862
ESTABLISHED 1744.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.
To BUILDERS, CARPENTERS and BLIND MAKERS.
AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

FOR THE SUM OF £6.
Net Prompt Cash.

PRICE LIST ON APPLICATION.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4*l.* per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

JAMES W. TYLER, CONTRACTOR FOR
DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,

ON IMPROVED PRINCIPLES.

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England.

Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done as his best recommendation.

Good Zinc badly laid will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will find that this important point is thoroughly attended to, and at no extra cost.

This Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr. TYLER'S directions.

THE LAND SECURITIES COMPANY
(Limited).
Capital, 2,000,000*l.*

DIRECTORS.

The Right Hon. the Lord NAPIER, M.P. President.

OFFICES.—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, Office of International Financial Society, No. 60, Threadneedle street E.C.

The Company will make Advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security:—

1st. Of landed estates, first-class house-property, and real property of all descriptions and tenures, and of all estates and interest therein.

2nd. Of rates, dues, assessments, and impositions of all descriptions, raised or that shall be raised under the authority of any Act of Parliament, public or private Royal Charter, Commissions of Sewers, Drainage, or other sufficient legal authority on the owners or occupiers of land.

3rd. Of charges and securities of all descriptions upon or affecting landed estate, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private.

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32, Charing-cross, London, S.W.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to

CROGGON and CO. 2, DOWGATE-HILL, London; and 2, GOREE PIAZZA, Liverpool.

POLONCEAU and SEYSSEL ASPHALTE.

ESTABLISHED  1838

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used for paving Stables (as shown above), the absence of joints preventing the generation of vermin. For Estimates and Prices, &c. &c. apply to JOHN PILKINGTON, 15, Fish street-hill, London, E.C.

Country Builders supplied with Asphalte in Bulk for covering Footings, Barn Floors, &c. with instructions to lay it down.

PLASTER of PARIS.—The ONLY London Maker, the best and the oldest established (1830), is
ROBESON,
MOUNT PLEASANT, GRAY'S-INN ROAD, HOLBORN.
The cheap country made article is sold by nearly all the dealers, agents, and pretending manufacturers, careless as to quality. Superfine and fine Plaster unequalled. Good plaster saves labour and vexation.

INDIA-RUBBER MILL BANDS,
WASHERS for STEAM JOINTS, HOSE PIPES, and FLEXIBLE TUBING.
A STOCK OF THE ABOVE ALWAYS ON HAND.
JAMES LYNE HANCOCK,
VULCANIZED INDIA-RUBBER WORKS, GOSWELL MEWS, GOSWELL ROAD (opposite Spencer street) LONDON, E.C.

The Builder.

VOL. XXII.—No. 1125.

*Lady Eastlake's History of our Lord as Exemplified in Works of Art.**

IN continuation of our notice of this work, we would draw the attention of our readers to Lady Eastlake's subtle distinctions of the modes with which different artists have treated certain subjects in successive ages. In the illuminations of MSS., especially in their immense variety, may be traced the periods where the old traditional forms give place to new renderings, where a new meaning has been attributed to certain facts, where legends gain ground, where heresy creeps in, all these differences being the indications of recognised stages in art. In the fourteenth century a fanciful class of religious work comes into notice, in which a succession of subjects and types from the Old and New Testaments was laid down, and which was conventionally repeated into the next century. Several of these types, however, are only made to correspond with one another by taking into account the most far-fetched resemblance. Absolom hanging on the tree is likened to the Saviour. The king of Ai, cut down from the tree on which Joshua had hanged him, is placed to correspond with the descent from the cross. Reuben searching for Joseph at the well is compared to the three Marys. The death of the sons of Eli to the murder of the innocents. Lady Eastlake has given the contents of the most important of these works, the "Biblia Pauperum" and the "Speculum Salvationis." In keeping with this feeling, which seems to have been an undercurrent in art from the beginning, the six days of the creation pointed to six periods of history. "The first from Adam to Noah, the evening of which was the deluge; the second from Noah to Abraham, the evening of which was the confusion of tongues; the third from Abraham to David, of which the evening was the wicked reign of Saul; the fourth, from David to the Babylonian captivity, the evening of which was the sins of the Jews which drew upon them the judgment; the fifth, from the Babylonian captivity to the coming of Christ, the evening of which was typified by the wickedness and blindness which hid the true Messiah from their sight; the sixth, from the first coming of Christ to his second coming to judge the world, the evening of which these ancient commentators express by the question, 'When the Son of Man cometh, shall he find faith upon the earth?'" We have, in the British Museum, the early MS. of the tenth century, from which a diagram showing "The Creation" is taken. It consists of a circle formed with three concentric lines beyond the limits of which the head and hands of the Creator protrude. From the mouth proceed two trumpet-like forms supposed to typify the double command, "Let there be a firmament in the midst of the waters, and let it divide the waters from the waters." The firmament is shown by the segment of a circle within the diagram, and the waters by wavy lines. A dove, with a cruciform nimbus, enveloped in part of a vesica, represents the Spirit of God moving upon the face of the waters. The right hand holds a pair of scales and a pair of compasses. This slight configuration, in the hands of those familiar with the system of symbolism, suggests a world of thought. In a series of the Days of the Creation, painted on the walls of the choir of the cathedral of Monreale, the same subject is treated in a very different way. The head and arms of Christ are seen in front of a series of shaded concentric circles, the symbol of the heavens. From the breast of Christ descends a straight ray to the surface of the waters depicted beneath. On this ray is a small dove with a nimbus round its head. At the base of it, in the waters, is a large face, the lines forming the hair and beard rippling away till they are lost in those forming the water. In these early forms it must be remarked that no limner attempted to produce a delineation of the Father. The Creator shown is always Christ. It was Michelangelo who first departed from this rule. In the Sistine Chapel in the Vatican he gave form to that idea, which till then it had not entered into the heart of man to conceive, now known in Italian art as "The Padre Eterno." Raffaelle's "Creation of Light" is given as an example of the powers of ripe art, and as embodying this new idea. In this the Almighty—a Jove-like figure in bold drapery—is seen riding on the clouds, and, with outstretched arms, thrusting great masses of mingled flames and clouds asunder. The increased power is gained at the expense of the preservation of the traditions perpetuated in the quaint symbols of former artists.

The first engraving of the "Creation of Man" is taken from the Orvieto sculpture. In this, Christ, as the Creator, is putting the last touches to Adam's face, who is standing in a passive attitude, as though undergoing an operation at the hands of an occulist. The mosaics at St. Mark's represent the youthful Christ, with His sceptre in His hand, infusing the living soul into the first man, the soul being represented by a small winged nude figure which, with outstretched arm, looks as though it would fly into his breast. Another cut shows Adam seated on a bank before the Creator, from whose lips to those of our first parent proceeds the breath of life, represented by a long ray. The last example given is from the Ghiberti gates. In these Adam, no longer a crude outline of humanity, but a full-aged, full-sized muscular figure, is being raised with one hand from a recumbent position by a benignant Creator, who blesses him with the other. Lady Eastlake cannot let the mightiest of the Florentines pass scot-free. "We see here," she says, "whence Michelangelo, with those gates constantly before him, took the figure of his Adam in the Sistine Gallery."

The illustrations representing "The Creation of Eve" mark the strides made by imagination in depicting this act. In the first, taken from the Orvieto sculpture, a nude figure is sleeping on the ground, while another, fully draped, with a strong resemblance to the first in feature, and identical arrangement of the beard and hair, is taking a bone out of an incision made in his side. Two stunted trees are the only accessories. A second illustration from the same series shows Eve created, seated on a bank, with her feet and ankles still confined within Adam's body. The same two trees are in sight, though one of them has been unaccountably removed to a considerable distance, and two angels are added to the scene. But Ghiberti grasps the subject with a very different result. A semicircle of angels fills the sky, contemplating the scene below, in which a graceful female form has been raised from the sleeping Adam's side by four angels, one of whom is guiding her arm, so that her hand may touch that of the Creator. All grotesqueness has vanished, and a sufficing beauty has taken its place. The only solecism is a wooden paling in the foreground, a piece of carpentry suggestive of "sweat of the brow" that Adam is not likely to have executed.

Art has illustrated the Scriptures so fully, that when by chance we come upon a gap, we are surprised. In many incidents, not only are the actual occurrences as related by the sacred writers given, but intervening moments and facts not mentioned, but which must have taken place, are represented. In the history of Moses, however, there was a singular gap of six hundred years in the delineation of one very beautiful fact, that from its power of touching the heart might have been expected to have been an every-day subject: we allude to the watch kept by the little sister of Moses upon the exposed infant, "to wit, what would be done to him." In a thirteenth century Bible, in the British Museum, we may see that the poetry of this affectionate care and curiosity was recognised by one artist, and then its capacity as a vehicle for feeling seems to have been overlooked till Paul de la Roche gave form to it anew.

Fulness of detail and diversity in the moment chosen to be delineated are, perhaps, most apparent in the representations of "The Crucifixion." This has been conceived in a dozen different lights altogether irrespective of the mannerism of different schools. Lady Eastlake points out that the accessories are the vehicles of this diversity, and has classified the various treatments under the following heads:—"*Symbolical*, when the abstract personifications of the sun and moon, earth and ocean, are present. *Sacrificially symbolical*, when the Eucharistic cup is seen below the cross, or the pelican feeding her young is placed above it. *Simply doctrinal*, when the Virgin and St. John stand on each side as solemn witnesses, or our Lord is drinking the cup, sometimes literally so represented, given Him of the Father, while the lance opens the sacramental font. *Historically ideal*, as when the thieves are joined to the scene and sorrowing angels throng the air. *Historically devotional*, as when the real features of the scene are preserved, and saints and devotees are introduced. *Legendary*, as when we see the Virgin fainting. *Allegorical and fantastic*, as when the tree is made the principal object, with its branches terminating in patriarchs and prophets, virtues and graces. *Realistic*, as when the mere event is rendered as through the eyes of an unenlightened looker on." And further variety may be counted in combinations of any two or more of these modes. The symbolical treatment was that adopted by the earliest artists. They aimed at depicting the darkness, the quaking of the earth, and the other signs of nature's commotion that St. Matthew records. Abstract personifications of the sun and moon, the earth, and ocean, are represented as being the grand witnesses of the scene. An etching from an ivory of the ninth century shows the figure on the cross without a nimbus, or nails, or wounds. A hand from heaven, assisted by two angels standing on the arms of the cross, is holding a crown a short distance above the head. The sun and moon, half-length figures seated in clouds, occupy the panels left by the arms of the cross in the upper part of the space. On a level with the foot of the cross stand four figures, two on either side. The figure on the right hand of the cross carries a banner in her hand, and represents the Church; that on the left turns her back upon Jesus, to represent the Synagogue. The figure behind the Church is that of the Virgin; the fourth that of St. John. Below all this is another line of symbols. Three figures are represented as rising from the dead,—two from classic tombs, one from the waves, and earth and ocean are seated in the two angles, the former nursing a serpent at her breast and

See p. 593, *ante*.

holding a branch in her hand; the latter supporting a fish with one hand, and with the other grasping the edge of an overturned urn, from which a stream is issuing. Some ivories of about the same period place the four Evangelists on the transverse beam of the cross. In others Earth nurses children at her breast, and has the serpent coiled round her arm, or a small human figure on her hand, supposed to represent the darkness on the face of the earth. A third figure occasionally occurs, seated between earth and water, representing the heavens,—"Heaven and earth are full of thy glory." Another female figure, crowned with towers, is supposed to personify Jerusalem, the scene of the tragedy. Coiled round the foot of the cross, "the old serpent," the origin of evil, may be seen looking up at the figure on the cross, in reverse of his triumphant position at the Fall when he looked down upon our first parents. This last, at a later stage, was replaced by a skull, supposed to be that of Adam. In combination with these leading features were many minute details, all intended to convey some meaning, and yet so remote in their association at first sight, as to require a practised skill to decipher them.

A more simple rendering is illustrated from a MS. in the Brussels library. In this Christ is nailed to the cross, clad in a loose-fitting garment, and below his feet on the plinth of the cross is depicted the eucharistic cup. From the ground the Virgin looks up, with hands outstretched, on the right, and St. John on the left. The sun and moon are shown, the one veiled, the other asleep, in circles over either arm of the cross. An eleventh century crucifixion (from the catacombs of Pope Julius) conveys the idea with the same five figures; but in this a battlemented wall is introduced in the background, and a few wedges stuck into the earth to steady the cross. The eucharistic cup is absent; but the inscription upon the head of the cross appears. Lorenzo di Credi has elaborated his background into a distant view of a city on the banks of a wide river. Michelangelo, while confining his figures to five, has substituted the heads of two angels looking out of two wreaths of clouds for the sun and moon. His virgin is more emphatically angry than sorrowful, and his St. John more deprecatingly crouching than sympathisingly sad. The principal figure is now nude, and the skull lies at the foot of the cross. Martin Schön limits his figures to three: a hooded virgin, with folded hands and eyes cast down, awaiting, as it were, the will of the Father, and a young St. John, gospel in hand. The figure on the cross is nude, with a length of drapery round the loins, the ends of which are outspread scroll-wise. So far the Virgin and St. John have stood in isolated positions at equal distances on either side of the cross, forming a pyramidal outline; but, in the crucifixion of M. Guffins, of Antwerp, they have approached the feet of the Saviour, clasping one another by the hand, while the Magdalen abandoning herself to grief, with her head bowed down to her knees, kneels before them.

The next variation in the accessories of the scene on Mount Calvary is the introduction of two figures, the one lifting a lance, the other a sponge, embodying the fulfilment of the prophecy. And here we may point to the curious manner in which legend has singled out some persons and written their histories in art. The individual who pierced the Lord's side was early distinguished by the name of Longinus. After a time he was pronounced to be the same centurion who was converted by the signs following the death of Christ. A legend in an Anglo-Saxon MS. (tenth century) in the British Museum describes Longinus as blind, and to have recovered his sight when some of the blood fell upon his eyes. The soldier holding the sponge has been named Stephaton, and then left in obscurity. The history of the thieves, too, the next accessories on the scene, has been elaborated by legend. The Venerable Bede says the good thief was called Matha; the bad thief, Joca. St. Xavier calls the one Vicimus, the other Justinus. Nicodemus names them Dismas and Gestas; the apocryphal gospel of the infancy of Christ supplies the fourth designation of each, Titus and Dumachas. The Roman martyrology elevates the good thief into Sanctus Latro. In the flight into Egypt the Holy Family are related to have met with a band of thieves, amongst whom were the two in question. "Titus, moved by some mysterious instinct, persuaded his companion not to arouse the other miscreants but to let the child and his parents pass, giving him as a bribe his girdle and the promise of forty groats. On this the Virgin, not knowing the meaning of what she uttered, prophesied that God would receive him at His right hand, and grant him the pardon of his sins. And the child Jesus added, that in thirty years they should both be crucified with Him, on His right hand and on His left, and that Titus should go with Him into Paradise." Jacob de Varagnie gives another version, to the effect that when the robbers rushed upon the Holy Family, one of the band exclaimed, "Surely if it were possible for God to be seen in the flesh, that boy must be God;" and this was the thief to whom Jesus said, "To day shalt thou be with me in Paradise." The good thief occupied a long share of attention from the circumstance of an inquiry being made as to his claim to be considered a martyr. SS. Jerome and Buonaventura both went into this question, and both awarded him that rank. Then came further inquiries into the cause of his conversion, attributed to the shadow of Christ having fallen upon him, and into the occasion of his baptism, as this sacrament was considered indispensable to salvation. His advocates urged that the water that flowed from the wound in our Lord's side must have regenerated him; and with this explanation inquiry seems to have been satisfied. The fainting of the Virgin at the death of her Son,—another episode not mentioned in Scripture,—has been taken up by legend and frequently illustrated by art. Angels perform a very important part in the mode some artists have rendered the scene. Early theologians,—St. Augustine and St. Bernard,—laid it down that angels had two powers, that of understanding and that of executing, the one being in their heads the other in their wings. Hence a conventional mode obtained of drawing angels with heads and wings only. The Renaissance masters added breasts, arms, and hands, Duccio having previously hidden their legless condition with graceful drapery. Gandenzio di Perrari, however, shook off the trammels rivetted on art by the subtleties of the disputations, and his angel kneeling, with clasped hands, on a cloud hanging over the cross in his picture of the Crucifixion, is deservedly pointed out as one of the most beautiful beings ever conceived.

In realization of what is called a *santa conversazione*, a goodly company of saints is sometimes grouped around the principal figures in the Crucifixion, differing in their identity according to the patron or locality of the church for which the picture was painted. Lady Eastlake notices an instance of this in the Ghigi chapel of the Church of St. Augustine, at Sienna. Besides the Virgin and St. John, the Magdalen, St. Mary Monica, and St. Augustin, are shown on one side of the cross; Mary of Cleophas, John the Baptist, and St. Jerome on the other, St. Augustin being introduced as patron of the edifice, and St. Jerome as a cardinal or ecclesiastic, as a representative of the clerical founder. The saints most frequently chosen to be present, on canvas, at this scene, are St. Jerome, St. Francis, St. Dominic, St. Rocco, and St. Sebastian, St. Catherine of Sienna, and St. Veronica. The Magdalen, the beautiful, loving, penitent mourner, always shown with more passionate gesture than any other figure, is seldom absent. Fra Angelico troubles not with her beauty: he places her in his grandly beautiful picture of the "Adoration of the Cross" (in the chapter-house of the Convent of St. Marco, Florence) on her knees, with her back to the spectator, tenderly supporting the fainting Virgin.

The allegorical taste of the fifteenth and sixteenth centuries gave living arms to the cross. One illustration of this disagreeable treatment of the subject shows the cross rising from a fragment of a rock from which protrudes an arm. The transverse beam terminates in two arms, and a fourth rises from behind the head of Christ, and, with a key in its hand, is unlocking the door of a mansion in the distance. On the right of the cross is a woman seated on a winged lion, having four different kinds of feet—a foot, a hoof, a claw, and a paw. She holds a chalice in her hand, in which she is catching the blood spirting from our Lord's side: on the left, another female figure, blindfold, is seated on an ass, three of whose legs are broken, denoting its speedy fall. These embody the idea of the triumphant church and wrecked synagogue. The arms proceeding from the cross are placing a crown upon the church, and thrusting a weapon into the head of the synagogue.

Velasquez has treated the crucifixion in a totally different manner, unsurpassed in feeling and suggestion; yet devoid of any accessory. The luminous figure of the dead Christ stands out supernaturally from a sea of darkness. There is no sign, no other figure to break the solemn silence of this desolate blank. The head has fallen forward in death, causing the hair to veil the features. Not a breath appears to be stirring; all is still and dark as though the earth had turned into one vast chamber of mourning.

An etching of Vandyck's picture of the solitary Christ is given on the same page. Here the background is the scene of elemental strife; the heavens are rent, &c., and a huge serpent holding an apple by a stem in its mouth is writhing round the foot of the cross. But the presence of these objects is not so telling as their absence in the utter gloom and loneliness of Valasquez's realization of desolation.

Besides all these modes of handling, there is the most complicated of all, those in which the crucifixion is treated as a whole. Full of figures, dramatic incidents, horsemen, soldiers, armour, glittering weapons, banners, plumes,—this, as offering facilities for gorgeous combinations, has been a favourite subject for large paintings. In the earliest known example of this class (Giunta Pisano), the crowd of spectators is divided as in ancient church congregations, the men on one side, the women on the other.

The cross which Art has figured in the various conceptions of this grand subject thus strung together, has been traced by legend into the garden of Paradise. The angel guarding the portals of Paradise gave three pips of the tree of which Adam and Eve had eaten to Seth, who placed them under his father's tongue when he buried him in the valley of Hebron. They sprung up into three saplings, which by the time of Moses had united and become one. It was with that he struck the rock, &c. David also possessed this tree, and, after having performed many wonders with it, planted it in his garden in Jerusalem. Solomon, finding it large and strong, had it cut down for one of the beams of the Temple, but the workmen were unable to make it fit in anywhere. It was ultimately thrown into a pond, where it rose to the surface and formed a bridge. When the Queen of Sheba saw it she told Solomon that One would hang on it who would be the Saviour of Adam and all his posterity, which caused him to have it overlaid with gold and silver and placed over the door of the Temple, that all who entered might bless it. Rehoboam, however, stole it for the sake of the gold and silver, and buried it out of sight. But a well was dug many years afterwards just over the spot, and up came the beam to the surface of the water. This was the pool of Bethesda. As it floated there it was seized by the Jews and fashioned into the cross upon which our Lord was nailed. After the crucifixion the cross was again buried, and lost sight of for three hundred years. At the end of that time the Empress Helena arrived at Jerusalem, and after some difficulty obliged the Jews to point out the spot where it was concealed. One Judas began to dig beneath the Temple of Venus, erected by Hadrian, over the buried cross, and at a depth of 20 ft. found three crosses. At the suggestion of Macarius, a dead man was laid upon them in succession, and as he came to life upon the third, this was known to be the true cross; whereupon the empress divided it in two, and leaving one portion in Jerusalem, took the other half to her son at Constantinople. He inserted a piece of it into the head of a statue of himself, and sent the rest to Rome, where it was deposited in the church of Santa Croce, in Gerusalemme, built on purpose for it. She also gave him two of the nails, one for his horse's bit, the other for his crown. The third she threw into the Adriatic to tranquillize the waters.

"The Ascension" is another grand subject that has been treated with singular frequency and diversity by art, notwithstanding the difficulties attending any adequate representation of an incident so supernatural. An early ivory shows our Lord in the act of flying, with extended arms, draped with a scarf, and a hand from above outstretched to welcome him. His back is turned, as though intent only on the joy awaiting him in heaven. A twelfth century ivory shows the principal figure with one foot still touching the earth, the apostles grouped on either side, two angels attending above, and the hand, as before, just visible, protruding from a cloud. One of the frescoes of Giotto (an illustration of which is given) shows the apostles, virgin, and angels, all adoring, arranged in groups, and the figure of our Lord, in mid-air, turning joyously to the glories of heaven.

Perugino, in a magnificent altar-painting, has designed our Lord, lingering and looking down lovingly on those he is leaving. Thirteen little bodyless angels have arranged themselves round him in a vesica-like frame, and six larger and limbed angels, four of whom are playing rapturously on musical instruments, form, as it were, spandrils in the background of the upper part of the composition. Raffaelle raised the glance again from earth to heaven, and rendered the apostles open-mouthed with consternation at the uplifted figure. Correggio has filled the air with little wingless angels, all manifesting the utmost delight, but certainly not conducing to a realization of the event.

Among the curiosities of Christian art may be placed the German ordering of the arms of Christ. In this the instruments of the Passion are wrought up into a shield, helmet, and crest, having our Lord and the Virgin as supporters. There is a class of pictures, too, the subject of which is called the mass of St. Gregory, that, in its far fetched scheme, must be regarded as singular. In this a bishop or priest is officiating at an altar, attended by other priests, upon the flat top of which our Lord has miraculously revealed Himself. The background is occupied by every instrument and object at all connected with the Passion, spotted about wherever there is room for them, comprising such articles as the basin and jug with which Pilate washed his hands; the hands that smote our Lord, one of them holding the plucked out hair; the ear of the servant of the high-priest and his lantern; the head of Judas with the bag round his neck; the rope with which the soldier dragged the Lord; the miraculous portrait given to St. Veronica; besides the more familiar garments, dice, hammer, nails, cock, sword, scourge, lance, sponge, &c. There are several versions of this subject in the museum at Cologne. It is supposed to have had its origin in a legend of the appearance of our Lord to St. Gregory whilst in the act of sacrificing.

Mr. Edward Poynter's etchings are executed with much exactness and delicacy. In his outline etching of the Earl of Dudley's picture of "The Last Judgment," by Fra Angelico, there are more than three hundred figures given in the compass of an illustration measuring 8¼ in. by 7 in., with a fidelity and grace that would have charmed the good Frater himself. The expression in the countenances of the figures in the "Pietà" of Ambrogio Lorenzetti is rendered with beautiful intensity. The light and shade of the more finished etchings are, for the most part, well managed. The woodcuts portraying various character of art in its different stages—the stiff, scanty, angular outlines of the earliest artists, the graceful economy and devotional exaltation of some masters, the powerful tumultuous profusion of others, speak for the patient skill of Miss Clara Lane. And the engravers, Miss Matéaux and Mr. Cooper, have done her justice. When we add, that the 170 different passages in the life of our Lord, and His types, have been illustrated from the innumerable works of upwards of 270 known artists, besides those of the unknown miniaturists and others of Greek and Byzantine art, and of the Anglo-Saxon period, and that these works are scattered over some eighty depositories and collections in various parts of Europe, it will be acknowledged that Lady Eastlake and her collaborateurs invite us to an intellectual feast of rare occurrence.

With this recommendation we close a notice that affords, perhaps, sufficient indication of the reverential spirit in which this work has been conceived; of the genuineness of the taste with which it is irradiated; and of the scholarship and love of art with which it has been executed.

THE NORTHERN LOW-LEVEL SEWERAGE, AND THE THAMES EMBANKMENT.

In the course of several articles on the Thames Embankment, we have described the designed general construction and decoration of the portion now in progress, of this great work, and have explained the arrangement of the sewer in the Embankment, and the connexion, so far as decided upon, of the portion of the Low-level Sewer, with the general line of the Northern Low-level sewerage reaching from Chiswick and Fulham to Abbey Hills on the Lea. But, the "special construction" necessary at particular points in the length from Westminster to Whitefriars, has been merely referred to; whilst the decorative features of the landing-stairs, and of the steam-boat piers,—excepting those at Waterloo Bridge, which we illustrated,—have been alluded to only as having been noticed by us in reviews of the architectural drawings in two different exhibitions of the Royal Academy. But the structural features at least, as designed, manifest so much ingenuity, that we ought to speak of them minutely: moreover, those of our readers who are acquainted with the old system of the sewerage, and with the shores of the Thames, will require explanation, to complete their conception of the new or future system for the northern portion of the metropolis.

The whole of the *special* construction may be divided into that which is necessarily connected with the provision of access to steam-boats, or other craft, and that which belongs properly to the sewerage of London. This distinction however is not maintained in fact: for, in some cases the mouth of an old sower and a storm-water outlet occur where a landing-place is required; and the construction for the former becomes part of the substructure of the latter. In connexion with all the landing-places moreover, there are special contrivances for flushing the recesses; and these too claim to be described. Let us first give attention to the sewerage-intercepting arrangements proper.

The main sewers now discharging into the river between Westminster and Whitefriars, are the Victoria-street and the Regent-street sewers, the Northumberland-street sewer, the Craven-street sewer, the Savoy-street sewer, the Norfolk-street sewer, and the Essex-street sewer; and besides these there are sewers of secondary importance in streets such as Villiers-street, running in the direction of the river, as well as the numerous channels and outfalls to which we alluded in our last article.

The secondary lines and the minor sewers and drains are all to be intercepted. As to the principal sewers, of which the names have been given, all are to be so altered that the sewage at ordinary times will be intercepted, whilst at times of extraordinary rainfall there may be a discharge direct into the river. This discharge will in each case be at a lower level than that of the Low-lever Sewer; and as it will take place only when the sewage is in the largest possible state of dilution, no sensible pollution of the river is apprehended; whilst it must be recollected that the alternative presented, was the construction of the intercepting sewers of enormous dimensions, to serve the requirements of only very few days in the year.

The Regent-street sewer, passing from Charing-cross through Great Scotland-yard, has one outfall at the head of the dock by Great Scotland-yard Wharf; but there is a diversion somewhat above this point, by means of iron pipes, to a spot between Middle Wharf and Percy Wharf, to which also comes the Victoria-street sewer from Middle Scotland-yard, and from which spot the two sewers are continued, as four lines of iron-piping, to near low-water mark. The other sewers, at the commencement of operations recently, were not found prolonged so far; though the Essex-street sewer had been extended considerably. Some of the sewers and drains were not provided with flaps. Those which were, because of their opening below high-water level, were, as is now well understood, "elongated cesspools" during a considerable portion of each tide; and the concurrence of considerable rainfall with the time of high-water, of course led to flooding of basements.

In connexion with the parallel channels of the Victoria-street and Regent-street sewers certain works are contemplated; whilst there is to be a separate storm-outlet connected with the other outfall of the Regent-street sewer. First, as to the construction connected with the four lines of piping at present conducting the sewage of the Regent-street and the Victoria-street sewers to the outfall near low-water mark. So much of the piping as may be necessary, is to be removed: a foundation is to be prepared, with 2 ft. or more in thickness of concrete; and a chamber with weir-walls, and a penstock-chamber are to be built. The weir-chamber will measure on plan 25 ft. 6 in. by 22 ft. in the clear; and the height to the crown of the arch will be 14 ft. 6 in., divided into two stories, so to speak, —an upper one of 11 ft. 6 in. with a flooring of cast-iron plates, and a basement-chamber of nearly 3 ft. in height. The surface of the iron plates at one end will be level, with the inverts of the existing four pipes, and at the other with the invert of the Low-level Sewer. The space which will form the basement-chamber is to be divided along the centre in the direction of its length, by a dwarf wall, pierced with low segmental arches,—to support the plates,—and at the distance of 2 ft. from each side, by the arched substructure of the weir-walls, 2 ft. 3 in. in thickness, of the upper chamber. The floor-plates are to be bolted together, and jointed with iron-cement; and further, bolted down to stones to be built in with the lowest courses of the brickwork. The 2-ft. space behind each weir-wall is to be divided into three lengths of 7 ft., by masses of brickwork, for the sake of strength. These and the weir-walls are to be capped with massive blocks of granite, cramped and dowelled together, and properly formed with cut-water tops. Under ordinary circumstances the sewage from the four outlets, each 3 ft. in diameter, above described as appropriated to the Victoria-street and Regent-street sewers, would pass through the weir-chamber direct to the Low-level sewer. But should the chamber be filled, either from the four channels or from the Low-level sewer itself, to a height of 7 ft. 6 in.,—that is, 9 in. below the crown of the Low-level Sewer,—the sewage would immediately flow over the weirs and fall into the basement; whence, as already explained, there is to be an outfall direct to the river. Penstocks, however, have been thought necessary; so that these would require to be raised. What object they are to serve, since there are to be tidal flaps, we have not discovered. The penstocks are to be two in number; and they are to be placed to openings, each of 5 ft. 9 in. in width by 2 ft. 9 in. in height, side by side, in a chamber of 16 ft. by 6 ft. on plan; and which will reach from somewhat below the level of the basement-chamber, up to the underside of the paving of the footway on the embankment. The lifting-gear of each penstock will consist of a worm keyed on a vertical spindle, and moving a tangent-wheel, with pinion gearing into a rack fixed on to a wrought-iron connecting-rod; and is to be worked from the surface, by a socket-spanner, without counterweights. Very precise directions are given in the specification, as to the construction and fitting of these penstocks, and others. The working-faces of the valves and the valve-seats are to be planed, or turned and scraped, to close water-tight; shafts, spindles, hooks, tail-pieces, and bridles, are to be of the best and toughest fagotted iron; and the hooks, tail-pieces, and bridles are to be filed, fitted, and case-hardened on their inclined surfaces. The jagged bolts for fixing are to be properly bedded into the masonry and run with sulphur. Every facility is to be afforded for examining the castings during progress and before painting; and the whole of the iron is to receive one coat priming of red lead and linseed oil, and three coats best coal-tar before fixing, and the accessible surfaces one further coat of coal-tar when the work is fixed.

The openings from the weir-chamber to the penstock-chamber will be formed with blocks of Bramley Fall stone. The two outlets from the penstock-chamber through the river-wall, with their flaps, will come just below low-water level; but the upper portion of an arched recess in which they will be placed, will appear at low-water. This recess will be 15 ft. in width, and covered by a segmental arch. The openings, with the flaps, will be each 5 ft. 9 in. by 2 ft. 9 in. Besides the penstocks and tidal flaps described, there will be a D valve to each of the four iron pipes, before it enters the weir or overflow chamber; and there will be means of working this valve from the surface. To allow space for the penstock-chamber, the line of the sewer is slightly diverted from its general course; and to allow of the requisite extension of the overflow-chamber where intersected by the sewer, the bottom of the sub-way is there formed with cast-iron plates, (7-8ths of an inch in general thickness, curved to the form of the arch below, and with flanges bolted and run with iron cement,) carrying the brickwork of the floor of the subway. We should observe that, as the floor of the overflow-chamber is flat, and level with the lowest portion of the sewer, which is of barrel-form, the sides of the chamber cut into the sewer in a manner to induce deposit, and otherwise to operate unfavourably to the current, whether of the main line or the tributary. Even having a segmental form of invert, a branch-sewer would now generally be made to enter the main sewer at some height above the bottom of the invert of the latter; and this arrangement has been adopted in many parts of the sewerage of London. Why, therefore, a different system should be reverted to, where, from the attendant

construction, there would seem to be unusual disadvantages from keeping the level of the branch-sewer no higher than the invert of the main-sewer, is not clear to us.

We mentioned that there was a distinct outfall to the Regent-street sewer. It is, we believe, the original one, of earlier construction than the iron-piping. The point at which it is situate must be about 550 ft. farther from low-water mark than are the outlets of later construction. This outfall is to be preserved, extended to the embankment-wall by four parallel lines of iron-piping, each pipe to be 2 ft. 6 in. in the clear diameter. The ground will be first excavated to solid foundations for the pipes, and for a chamber and storm-outlet to be described: concrete, of 12 in. in depth for the pipes, and 15 in. for all other works, will be filled in; and subsequently, concrete is to be filled round the pipes. At the existing outlet, a chamber 12 ft. by 6 ft. 6 in. on plan, and about 12 ft. in height, is to be formed of brickwork, and with a flooring of 3-in. York stone. In this chamber will be the present D flap of the sewer-mouth, which is at about 5 ft. 6 in. below high-water level. The four lines of piping will commence from the chamber, at a level of about 1 ft. 6 in. below that of low-water; and, crossing under the Victoria-street sewer, will fall to about 2 ft. 9 in. below, in the 530 ft. of their length. They will be put together in 9 ft. lengths; and the socket-joints will be caulked with yarn to one-third the depth of the socket, and run with lead for the remainder of the depth; and are to be tested to be water-tight under a head of 30 ft. at the least. The retaining-wall of the embankment is to be recessed; and four tidal-flaps are to be fixed to the mouths of the pipes. The Regent-street sewer, it should be explained to those who may not have read our original description of the Middle-level sewerage, has been so altered where it crosses the Circus, Oxford-street, that it will serve for the relief of the Middle-level Sewer when this becomes overcharged.

The Northumberland-street and Craven-street sewers are to be thus treated. The existing channels on the foreshore are to be destroyed; and a line in extension of the Craven-street sewer is to be joined into one in extension of the Northumberland-street line, which is to be constructed 320 ft. farther to a storm-outlet that is to be formed, in a central position, in the substructure of that one of the Charing-cross Bridge steamboat piers which will be on the south or up-stream side of the brick pier of the bridge. These two steamboat piers will be precisely similar to one another, excepting as to the construction mentioned, which of course will not appear. The decorative features of these piers also seem at present intended to be precisely similar, unless in the sculpture, to those at Waterloo Bridge, where there is a similar arrangement of a sewer, the Savoy-street sewer, in connexion with the substructure of the steamboat-pier, up-stream, to that which we are about to describe. Before speaking of the arrangement in the substructure of the Charing-cross Railway Bridge, however, it should be stated that the confluent streams, one from Craven-street and the other from Northumberland-street, reach the low-level, partly by falls of steps, starting in each case from the line of the present wharf-wall. These steps will serve likewise for descent from sewer-entrances, one of which is to be placed at the end of Craven-street, and the other at the end of Northumberland-street. It need scarcely be explained that the existing outlets of these sewers are below high-water level: the invert of the Northumberland-street sewer, indeed, is as much as 9 ft. 6 in. below. By the steps in each case the sewage will fall to the level of 2 ft. 6 in. above the level of low-water. From the bottom of the steps to the Northumberland-street sewer, that sewer, including the 320 ft. below the junction of the Craven-street line, will continue of the dimensions 5 ft. in width, and 6 ft. 3 in. in height from centre of invert to crown of vault. The sides will be perpendicular to the springing of the vault; and will be 18 in. thick, the vault and invert being each 9 in.; the whole brick-work being bedded on and covered with concrete. The Craven-street branch will be 3 ft. 9 in. by 2 ft. 6 in., egg-shaped, and of 9-in. work encased with concrete. There would be every advantage in placing this sewer at its entrance into the Northumberland-street line, some 18 in. higher. The arrangement of the overflow and penstock chambers to the Northumberland-street sewer, and the manner of working, here are somewhat different to what we have described; though the principle of getting an outfall for storm-waters crossing under the Low-level Sewer, may be the same. In the case of the Regent-street and Victoria-street sewers, the penstock-chamber, on plan, was placed between the Low-level Sewer and the wall in which was the outlet into the river. In the present case, the penstocks are to be in the opposite, or landward, side, of the sewer, and three in number. A combined arrangement of overflow-chamber and penstock-chamber will be divided by weir-walls into three channels, namely two lower, or basement, side-channels for discharging the storm-waters into the river, and an upper central channel for conveying the ordinary discharge into the Low-lewel Sewer. The weir-walls are to be capped with granite as before; and the penstocks are to be worked from the public footway. On lowering the penstock of the middle channel, or on any accumulation in the Low-level Sewer, the penstock being open, the sewage would rise in the chamber, and after having reached the height of the weir-walls it would fall down to the two lower or basement channels; and the penstocks of these being raised, it would flow on to the river. The final outlets would be four in number, two to each side channel, and each one 3 ft. in diameter, and closed with a tidal flap as in other cases. The bottom of these openings would be 4 ft. below low-water level; the paved bed of the recess, outside, being 1 ft. lower. The invert of the Low-level Sewer, where passing over these side-channels, will be formed of iron plates curved to the required form.

For the Savoy-street sewer, the old channel for 15 ft. landward of the old river-wall, and works connected with it, are to be removed; and a length of 105 ft. of new sewer, 5 ft. 6 in. by 3 ft., and with straight sides, is to be carried down to an overflow-chamber in the substructure of the steamboat pier west of Waterloo Bridge. In the course of the length, and starting from near the line of the present river-wall, will be seventeen steps, each 1 ft. 3 in. on the tread, similar to those described as connected with the Northumberland-street and Craven-street sewers. The arrangement of the overflow-chamber and the penstock chamber is the same in principle as that of the chamber of the Northumberland-street sewer; though the proportions and dimensions are different. In the length of 105 ft. there is a junction of one of the lines, to be noticed hereafter, which intercept the secondary and minor sewers and drains. In the penstocks and their lifting-gear there are some modifications.

The storm-outlets and chamber in connexion with the Norfolk-street sewer and the Essex-street sewer may be similarly described; though the Essex-street outlet, alone of the two, is connected with the substructure of a steamboat pier. The added length in this latter case, including 3 ft. in place of old sewer to be broken up, will amount to 220 ft. 6 in., the dimensions of the sewer being 5 ft. 6 in. by 3 ft.; and the length will include a flight of steps, 30 ft. 6 in., and also a double bell-mouth chamber to form junctions with the intended intercepting sewer for minor sewers and drains. The footings and concrete will be stepped up as the steps rise. Where the brickwork happens to come above the present level of the ground or foreshore, it will be covered with concrete, 6 in. thick, which will be sloped down at the sides to a slope of 1½ longitudinal to 1 vertical. The overflow-chamber will measure on plan 16 ft. by 20 ft.; the width, the latter dimension, being divided into three compartments, by the weir-walls, as in other cases. The penstock-chamber, also, of the same dimension 20 ft., in one direction, and 4 ft. in the other, connected with the overflow-chamber, resembles in the main the chambers of the other outfalls; and as in those cases, the weir-walls are continued across the 4 ft. The chief difference between the overflow-chamber of the Norfolk-street sewer, and that of the Essex-street sewer, is in the dimensions, the former being 4 ft. shorter than the latter. The extension of the Norfolk-street sewer is 200 ft. in length; and of that, the steps occupy 33 ft.

At last we come to the interception of the minor sewers and drains. These are not to be carried down straight to the Low-level Sewer; but a distinct intercepting sewer is in process of construction in each of several divisions of the length between Westminster and Whitefriars, and at a distance generally of not more than some 30 ft. to 40 ft. in advance of the old river-wall. This is the work for which the fires at night are lighted, that are seen by persons crossing Waterloo Bridge, or Westminster. For, the labour, or as much as the time will permit, must be got through between tides; and every tide undoes something that had been done after the tide before. Some of the material deposited for the embankment, even, has been washed away at each tide; and powerful pumping-machinery is required to get the trenches sufficiently free of water for the work to be proceeded with. The intercepting sewers referred to may be divided into four lengths, two in each contract. One of these divisions would reach between Westminster and a point nearly opposite Whitehall Place; another between the Villiers-street sewer and that of Savoy-street; a third between Waterloo Bridge and a point below Arundel Wharf; and the fourth would comprise the space between Milford Wharf and Whitefriars, which includes the frontage of the Temple. The fall in each of these four lengths, except the second mentioned, is from each end to an intermediate point, where there are curved junctions and the head of one transverse line: this last line joins into the main Low-level Sewer. One of the four lines connecting the minor intercepting sewer with the main Low-level Sewer will be opposite the eastern end of Montague House; another, for the division running past the Adelphi, the Salisbury estate, and the property of the Duchy of Lancaster, will be the Savoy-street sewer,—the fall of the intercepting sewer being in this case wholly in that direction; another line will be identical with the prolongation of the Norfolk-street sewer; and the fourth will be the prolongation of the Essex-street sewer. Each of the intercepting-sewers will be 4 ft. by 2 ft. 8 in., egg-shaped, and of 9-in. brickwork, bedded on 18 in. of concrete, as well as covered with the same material at the sides and top. The numerous existing sewers and drains are to be connected with the intercepting sewer, either by short lengths of the same dimensions, or by 12-in. stoneware pipes.

Besides side entrances, which are fitted with 3-inch York steps and landings, ladder-irons, and wrought-iron safety gratings, and besides ventilating shafts of the ordinary character, with gratings, there are to be in connexion with the four lengths of intercepting-sewer, fourteen entrance inspection-shafts, each 2 ft. 6 in. square and 8 ft. average height, fitted with ladder-irons and covered with 3-in. York stone. These inspection-shafts are intended to be placed each immediately in front of an old sewer-outlet,—one of those generally having a tidal-flap, to which means of access might be desired. This arrangement of the intercepting sewer, or of the shafts and entrances connected with it, however, would seem to imply that ground, the whole length corresponding with the face of the present river-wall, will be kept free of buildings. If not so, the "inspection-shafts" would become useless. But, as yet, it may be premature to say whether lines of street referred to in the Act of Parliament, or some modification of them, will be carried into effect. Much of the work of which we have just spoken as work of the future, is actually finished.

We have not described in this article, either the decorative character of the steam-boat piers and landing-stairs, or the structural provisions for flushing which we referred to as connected with these features of the Thames Embankment.

THE ENAMELLED SHIELD OF WILLIAM DE VALENCE.

WESTMINSTER ABBEY.

M. Labarte, in his "Handbook of the Arts of the Middle Ages," after quoting a document cited by Mr. Albert Way, which tells us that an artist of Limoges, "Magister Johannes Limovicensis," was employed about the year 1276, to construct the tomb and effigy of Walter de Merton, Bishop of Oxford, says,—"This curious monument was despoiled of its enamelled metal at the Reformation, but there still exists in England an evidence of the high repute in which the enamelled work of Limoges was held, in the effigy of William de Valence, in Westminster Abbey. There can be no doubt that this curious portraiture,* if not the work of Master John, who might have been employed in consequence of the previous display of his skill at Rochester,

* Though Labarte calls it "portraiture," the effigy (a poor one in form) is not to be viewed with any certainty as a likeness. Portrait-statues were not customary until somewhat later.

was produced by an artist of Limoges." Labarte, by some mistake, dates the earl's monument much too early, but that does not here concern us. The effigy is of wood, overlaid with enamelled and engraved copper, and includes an enamelled shield displaying twenty-eight bars, alternately *argent* and *azure*, diapered; or, rather, ornamented with inlaid scroll-work; and having nineteen martlets, *gules*, displayed around the circumference of the shield.

This shield, Mr. Berrington (one of the vergers of the abbey)* has drawn in *fac simile*, and Mr. Durlacher has chromo-lithographed. The enamel is of the kind known as *champ-levé*, the spaces filled in with enamel being formed by hollowing away the metal.

The representation is accompanied with a clear descriptive notice of the shield and monument, by the Rev. Chas. Boutell, M.A.

We have taken the trouble,—no, the pains,—to compare the chromo-lithograph with the beautiful original, on the spot, and will only take one exception to it, which is that the gold scroll-work on the *azure* bars is made too thick and leafy. If the shield be examined from above, and not from the ambulatory at the side, this gold scroll-work will be found to consist of a much finer line than in the drawing. We have reason to believe that the exaggeration is the work of the lithographer rather than of the draughtsman.

There is probably no earlier example of enamelled metal for monumental purposes in this country than this effigy displays. Besides the shield, the pillow on which the head of the earl rests, and the sword-belt, still display beautiful specimens of the art. The date given in Mr. Boutell's account, 1296, is that of the death of the earl. The date of the monument is probably a little later.

The wooden portion of the altar-tomb, now much mutilated, on which the effigy rests, was doubtless ornamented originally in the arcade surrounding it, with other enamels on metal plates, and with paintings and gilding.

The chapel in which the monument stands, St. Edmund's, is on the south side of the choir ambulatory, the second chapel shown by the vergers, and is rich in variety. It contains about twenty monuments, including one of the finest brasses in the abbey. There are some other interesting specimens of enamelling on the well-known fine monument to Edward III., with metal statuettes on the side opposite the entrance to this chapel. These enamels are of later date (Edward III. died in 1377), and are probably of English make. The abbey is indeed an overflowing storehouse of art-wealth. We are obliged to Mr. Berrington for bringing into prominence one of the evidences of this fact; and hope his venture in a pecuniary point of view will be successful.

With reference to one or two of his brother vergers, by the way, we would suggest to those who appoint vergers that, in filling future vacancies, a little amiability and discretion should be amongst the qualifications required.

A characteristic bust of Sir George Cornewall Lewis, by Mr. Weekes, R.A., has been erected in the south transept, to balance one of the late Charles Buller. Amongst the most recent works set up in the abbey must be mentioned, too, a small painted glass window, in the east aisle of that transept, by Lavers & Barrand, commemorative of the late Vincent Novello, composer. The subject is St. Cecilia; and, we may add, the window is agreeable to the eye, and does not offend the judgment.

* "The Enamelled Heraldic Shield of William de Valence, Earl of Pembroke, A.D. 1296. Drawn in Fac-simile by Luke Berrington, Verger, Westminster Abbey." Durlacher, Brewer-street, London. 1864.

OLD OAK PANELLING ONCE IN LONDON, NOW IN NORTH WALES.

If there be a really happy man in the whole principality of Wales, it is Morris Charles Jones, of Gungrog, near Welshpool, in North Wales, esquire. At the cost of a flea-bite or a song, he has carried from Cheapside, in London, to Gungrog, in Montgomeryshire, the carvings of a whole room—direct, he believes, from the cunning chisel of the inimitable Grinling Gibbons. For seventy-two pounds, ten shillings, and threepence (72*l.* 10*s.* 3*d.*), he has acquired what he calls "an oak-clad room," fit to be named in the same breath with Gibbons's other rooms, at Windsor, Hampton Court, Burleigh, Chatsworth, and Petworth; and this insignificant sum has in reality covered every expense from Cheapside to Gungrog. The room (for we shall speak of it as such), was the principal apartment of Sir Edward Waldo's house, in Cheapside, over against Bow Church. Sir Edward was of the Mercers' Company, and a Lord Mayor of London, in the reign of Charles II., and the room translated from Cheapside to Gungrog had heard not Bow bells alone, but the loud laugh and the coarse jest of the "Merry Monarch." We have little doubt of this, and think it incumbent on the squire of Gungrog to keep every Oak-apple day, and every Lord Mayor's day, with true Guildhall and Gog and Magog hospitality. The 9th of November, at Gungrog, should be especially dedicated to a baron of beef, huge custards, and loving cups, with "no allaying Thames."

The Lord of Gungrog has told pleasantly enough, in a pamphlet of thirty-nine pages (printed for private circulation only), the story of his purchase; and has sought with some skill to invest his Cheapside and Gungrog dining-room with kings and queens, and even Quakers, with King George III., Queen Charlotte, and the Barclays of Ure, with,—

> Pomps without guilt of bloodless swords and maces,
> Glad chains, warm furs, broad banners, and broad faces,

with real lord mayors in every sense; men like Sir Robert Clayton, Sir John Moore, Sir George Waterman, Sir John Lawrence, Sir Thomas Bludworth, Sir William Hooker, Sir William Pritchard, Sir Patience Ward, and Sir John Shorter, lord mayors of London, of "credit and renown," between the Restoration and the Revolution.

Mr. Morris Charles Jones shall now speak for himself. Lovers of old London localities will envy Mr. Jones, and find fault with what is called at times (improperly enough) improvement:—"Since the Great Fire," writes the Lord of Gungrog, "it is believed that it can be established, that the house on the other side of the street, and immediately opposite Bow Church, built by Sir Edward Waldo, and in recent times No. 108, Cheapside, has been visited by six reigning sovereigns, from Charles II. to George III. on the occasion of civic festivities, and for the purpose of visiting the Lord Mayor's show." Six visits from royalty on mayoralty occasions, running over a celebrated century of English history, cannot fail to invest a room with a regal halo of associations; and Mr. Jones, of Gungrog, can doubtless think down hours to moments with pleasant turtle and turbot associations, varied at times with banners and beef and men in armour, sheriffs, recorders and chaplains, City sword-bearers, City marshalls, common criers, City remembrancers, City barges, City chronologers, City architects, and *even* City poets, mixed with—

> Gun, drum, trumpet, blunderbuss, and thunder,

and wound up at last with town clerks and common serjeants of all ages and reputation for fair dealing and good living.

But the associations connected with the "old oak panelling" at Gungrog, are by no means our sole or main inducement for this corporation of London ramble about festive doings in London proper; our business is mainly with the writer's belief that seventy-two pounds and a few shillings, and his own good sense and knowledge of art, have been the means of making him the happy possessor of a room lined with panels and cornices carved by the great Grinling Gibbons. Mr. Jones is indeed to be envied if this be the case; but we doubt, however excellent the work may be, that Gibbons could possibly be the carver. In a long life—he was seventy-three when he died—his hands were never idle, and the known works from his hand will fully fill up all his years.

Except in St. Paul's, a crown and ecclesiastical structure, be it remembered—not a corporate one,—there is not a single certain example of Gibbons's art to be seen in the City of London proper. Finally, let us observe that, on Mr. Jones's assumption, Mr. Henry Cole and Mr. J. C. Robinson have been very remiss in suffering a genuine example of Gibbons's skill to pass into private hands; but those gentlemen, we suspect, can well defend themselves in this instance from any alleged neglect of their duty to the Committee of Council on Education, or of remissness in catering for the requirements of the public museum at South Kensington.

THE ALBERT INSTITUTE, DUNDEE.—The plans prepared by Mr. Scott have been approved, and it is expected that the work will be commenced shortly.

MEDIÆVAL RESTORATIONS IN FLORENCE.

FLORENCE, after the lapse of nearly two years since our last visit, seems improved in all that distinguishes and ever has distinguished her among Italian cities,—brilliant, beautiful, combining with happiest contrast the antique majesty of the past with the refinements and animated life of the present. Whether the project for giving her the preference as the future capital of united Italy be or be not carried into effect, we cannot doubt that an intellectual and social precedence, a *hegemony* (to use the favourite expression of Italian writers), will continue to be the rank awarded to, the honour deserved by, the "Etrurian Athens;" and the politician or philanthropist may now find more interesting than ever the aspects presented by her in the evidence therein afforded, that liberal institutions, by their natural action, tend to develop all that is wealthiest in national life; that freedom of conscience and guaranteed liberty in every walk of social interests must unfailingly secure the atmosphere in which all energies will have their healthful growth,—the *only* atmosphere in which true progress becomes possible. Rome and Florence are now the moral antipodes, the most striking examples of opposite systems and their results within the geographically narrow bounds of the Alp- and sea-girt peninsula.

Anxious to secure the pleasure of a first view by moonlight of the grandest public monument brought to completion since our last visit here,—the Santa Croce façade,—we set out a few hours after our arrival; and from the opposite end of the oblong piazza enjoyed to best advantage, though the moon's full face was at the moment partially overclouded, that noble example of the Tuscan Gothic, finished with such fine execution of details, so rich in its incrustation of coloured marbles, so harmonious in the blending of colour with form, of architecture with sculpture. Complete in all but the reliefs to occupy the tympana over the lateral doors, "The Elevation of the Cross," by Dupré, "The Vision of Constantine," by Zocchi, and "The Adoration of the Cross," over the great portal, now represented by chiaroscuro copies in the place of those sculptures not quite ready for their destined location, this façade has entailed an expense of 300,000 francs, therefore considerably above the estimated cost, 45,000 scudi. The heads, copied from Giotto, that stand in relief from gilt aureoles within quatrefoils round the archivolts of the portals, being the Saviour and Apostles, the principal Prophets and Patriarchs, enter well into the general design, and will bear examination, thanks to the merit of their artists. One must, however, regret that this splendid construction is but an adjunct, and serves merely to mask the front of an edifice whose exterior is otherwise plain even to sterility, whose modern campanile is utterly incongruous and almost an eyesore in its opposition to that magnificent elevation beside which it stands. On the spacious piazza in front is being prepared the basement for the monument of Dante, to be inaugurated on the occasion of the grand centenary celebration in the spring of next year, now a subject of universal interest for Florence, and the aim of many exertions undertaken in a patriotic—it seems also in a very liberal—spirit. *Two* weekly periodicals, one for the people, one for the more learned few, have been set on foot with a view to preparing and instructing the public mind as to the scope and *morale* of the proximate festival, as to all that concerns the *altissimo poeta** individually, the age he lived in, the spirit or philosophy of his writings. A more important publication, described by the editors, Cellini & Ghivizzani, as a "tribute from the nineteenth century to the poet of all centuries," has been promised, but not yet commenced, in a prospectus, containing the names of forty-five esteemed writers and the titles of the subjects severally chosen by them, all in reference to Dante, his age, the institutions, the social, moral, and religious condition of his time,—for volunteered contributions to a volume, the mere publishing costs of which (we learn from one of the editors) will be at least 1,000 ducats. In that list we are glad to see such high names as Cesare Canter, Mamiani, Guerrazzi, and Tommaseo; in the subjects to be treated, such promising ones as, "Dante and the Bible," "Dante and Shakspeare," "Monastic

* "Onarate l'altissimo poeta"—a line from the "Inferno," appropriately chiselled on the monument of Dante, at Sta. Croce.

Orders in the Age of Dante," "Europe, from 1250 to 1350," "The Fine Arts in relation to the Divine Comedy."

We rejoiced to find, on revisiting that magnificent centre of Mediæval art, the Or San Michele Church, that the project, entertained two years ago, of desecrating this edifice so far as to restore it to its ancient condition as an open arcade, surmounted by two stories of building (once used for archives), and removing the superbly beautiful tabernacle of Orcagna from its aisle to some church where it might be better seen than at present, has not been carried out—is indeed abandoned. Or San Michele is again open for public rites, and devoutly attended by worshippers still attracted, as in olden time, by the reputation and sanctity of the Madonna, so splendidly enshrined in Orcagna's structure; the only noticeable result obtained by the works ordered here in 1862, being the restoration to view of four fresco figures, the Evangelists, not without superior merit, by Londini (called Jacopo il Casentino), between the intersecting ribs of a bay in the vaulting.* Revisiting the grand old basilica of S. Miniato, we found the restoration both of its interior and façade now complete; but the frescoes along both walls of the aisles, by Taddeo Gaddi and other masters (in great part obliterated), have not yet been touched, though destined (as we learn), for the restoring process wherever their originals can be recognised with certainty. The mosaics on the front and in the apse (the latter with the date 1297), have been renovated, and their groundworks regilded.† The old monastery is left still in a dilapidated state; whilst the public cemetery has been gaining over the platform-terraces on every side, besides lining the nave, aisles, and crypt, with its pavement of tombs; and beneath the esplanade, where that majestic church-front rises, so conspicuous from the city and the Arno, opens a spacious sepulchral vault, flanked by columns, with double staircase leading to it from the higher level. Besides the custode, the only person resident in the adjacent buildings is a priest, employed to celebrate daily a requiem mass in this basilica; and that stately interior, all paved with tombstones, memorial crosses, and other funereal sculptures, many of them perpetually adorned by flowers and evergreens, now left to solitude save for funeral rites, and the occasional visits of those led by curiosity or piety to the deceased,—presents an aspect of forlorn solemnity that much enhances its architectural effect. On the evening we entered it, a few mourners were kneeling or seated motionless beside tombs, where lamps were lit, and fresh flowers strewn. No sound broke the stillness, no taper burnt on the altars; and the whole edifice seemed consecrated to the silent memory of the dead.

Another intelligent restoration of mediæval antiquity, that of the Bargello, or *Palazzo Pretorio*, is still in progress, as for the last three years. That sternly picturesque building, founded in the thirteenth century, but invested with its most distinctive features, by the architecture of Agnolo Gaddi, about a century later, impresses us, particularly in its interior, like a romance in masonry, and seems to transport the mind into another age. Walking through its solemn halls and under its vaulted roofs, all emblazoned with painted heraldry, we may fancy ourselves surrounded by the living and palpable realities of the olden time, of the days when Florence was a potent though indeed turbulent republic. The destination of this palace for a museum of Etruscan and mediæval antiquities has been decided on, but not yet carried out; its halls and corridors being still vacant: the restoration of architectural details and armorial paintings is almost complete, and all the unsightly incumbrances in the form of partitions, by which the interior had been converted into a common prison, have been removed. Never have we seen a grander example of the Gothic in *civic* architecture than the great hall, the largest in this palace, hitherto divided into three stories of prison-rooms, with its fine old windows walled up. Vast, lofty, magnificent, it seems the fitting scene for the gorgeous revels or high councils of the republican city. Though of immense scale, its roof is supported by no columns; but a single diametrical arch spans the whole width, resting on pilasters at opposite sides, and supporting alone the weight of the vaulting, divided into two ample bays with intersecting ribs, an effect of aerial loftiness singularly impressive being thus attained. Another smaller but stately room, whose walls are covered with painted shields, and with vault finely tinted in deep blue studded with gold stars, was the principal apartment of the hated Duke of Athens; and an epigraph, within the deep recess of one window, tells with patriotic pride how the municipality had ordered the armorial escutcheons of that defeated tyrant to be restored, 1861, though the Florentine people had decreed that they should be all effaced in 1343. Another curious part of this interior is the high square tower, formerly divided into numerous small cells for prisoners, one of which, corresponding to the first floor, is shown as that where Niccolo de' Lapi (the hero of Azeglio's romance, and of local history at the period of the siege in 1529) was confined. There is no trace of any ancient staircase, and the division into chambers, up to the compartment where hangs a great bell, is still left.

In respect to the restorations projected, but not yet even commenced, in Florence, we must say "the greatest is behind;" while the long-expected and much-discussed façade of her cathedral remains in the state of a single foundation stone, buried beneath a platform of stairs; though, indeed, much has been done in the way of collecting funds, and designing and criticising elevations. It is about a year since forty designs were presented to the judgment of the appointed committee, which deemed not one worthy of receiving the highest prize, or even any prize on the highest category. This being the result, the committee has chosen ten architects of high repute for a new competition, with the intention of positively fixing upon the best among their designs, to be presented in the next September, for the long-delayed execution. Up to this day the collection has amounted to about 400,000f.; about 1,200,000f. being the estimate of total costs. Several of the Florentine nobility have given their co-operation, and collectors have plied their task in the different wards of the city on a regulated system. The design which had most generally received the suffrages of the public, before the competition of last year, was that by Matas, architect of the Sta. Croce façade; but the judges did not take this into consideration, nor did that gentleman even compete among the artists whose drawings were presented. Unfinished façades remind us of the San Lorenzo Church and its renowned chapels, with the Medici monuments by Michelangelo, and the splendid adornments of the tomb, in art of decorative character. Still, looking gloomy and unfinished in spite of its pomps and all the toil devoted to it, the gorgeous domed octagon over the tombs of those grand-dukes is yet unprovided with the requisites for public worship; but an altar, encrusted with *pietra dura* of the highest price, is in preparation at the establishment for that species of workmanship, called "Florentine Mosaic," to be ultimately raised in the apse opposite the entrance of that sepulchral chapel, veritably "a pyramid of precious stones," as Byron describes it.

* This artist, who flourished about the middle of the fourteenth century, painted sixteen figures of Prophets and Patriarchs, Miracles of the Madonna, the Penitent Thief on the Cross, &c., on the walls of the same church, now much faded, and said by Vasari to have been "half spoiled," even in his time. The other bays of the vault, probably once painted, are still covered with dingy whitewash.

† The mosaics of the apse, the Saviour, the symbols of the Evangelists, the Virgin, and the martyred soldier St. Miniatus, have been supposed a restoration of some original earlier than the thirteenth century. Those on the façade, with another majestic figure of the Saviour, on a gold background, seem to belong to the same school and epoch.

A RUN TO THE LAKES.

It is one of the inestimable blessings of our modern system of travelling that we can get to the country easier than our forefathers could. For example, a poor Londoner who is sick unto death of the dust in Piccadilly, or the liquid manure of Oxford-street,—who wishes to get out of the way of the metropolitan sewers or the metropolitan railways,—who is apprehensive of a *coup-de-soleil* or a brain fever; in one word, he who wishes to get out of London during the dog-days, will find it an agreeable change to do as we did a week or two ago,—take a run to the Lakes. It is possible to breakfast in London, leave Euston-square about nine o'clock, and, after travelling over some 300 miles of country, to dine about five at Windermere, in the county of Westmoreland; in one of the nicest hotels in the north of England, in a cool, clear, bracing mountain atmosphere, and with a panorama spread out before the eye which recalls everything that we can conceive of an earthly paradise.

The first impression of Windermere is one which the traveller is not likely to forget. There is a sweet little modern-antique Anglo-Norman village in the foreground; a silver lake, richly wooded, half hid among hills of a dark purplish colour, in the distance, which overtop each other until the Cumberland mountains and the peak of the "Mighty Helvellyn" are seen towering in bold relief against the horizon. Numerous villages and cottages here and there gleaming amongst the exuberant foliage, impart an aspect of domestic beauty to the unrivalled landscape, and supply all that is necessary to complete the picture.

The picturesque element in this English fairy-land so strongly overshadows and dwarfs every other subject, that it will not be easy for us to bear in mind the object we have always more or less in view while travelling, viz., to obtain some personal information concerning the condition of the people. The readers of the *Builder* have had abundant evidence for concluding that the most beautiful and romantic district of a country is not necessarily the most salubrious and healthy; and, although we shall not be able to point to such flagrant cases of sanitary neglect in the Lake districts as we were unfortunately compelled to do in Buckinghamshire or Newcastle, still we think that the few observations we have been able to make will not be altogether useless. For one thing, these lovely lakes are very wet places, and, as all good meteorologists know, they are signalized by a rainfall which is beyond comparison the heaviest in England. This fact is of itself sufficiently interesting to admit of our devoting some consideration to the conditions of existence in the Lake district.

At the same time we must not be supposed to be insensible to the natural beauty and grandeur of the scenery. It is indeed impossible for an Englishman not to feel proud of his native country as he stands over the brink of Windermere, or climbs to the summit of Skiddaw or Helvellyn! A thousand associations arise to connect the romantic beauty with much that is memorable in English history; with the superstitions of the ancient Druids; the Roman encampments; the Anglo-Saxon kings; the Norman Conquest; the wars with the Scotch; and, finally, with the unfortunate fate of the last of the Earls of Derwentwater. Here we stand in presence of the *genius loci* of some of England's greatest modern poets, of whom Southey and Wordsworth have found in the old picturesque churchyards of the district their final resting-place; and here, too, are the veritable scenes of the labours of such philosophers as Dalton and Sedgwick, who endeavoured not unsuccessfully to educe from the chaos of physical phenomena the true theories of a well-ordered and harmonious universe. The stranger who traverses these regions for the first time will be at no loss, if he study the guide-books, to find such associations recalled. Not to speak of Wordsworth's admirable work on the scenery of the Lakes, we have in this quarter such a prolific crop of guide-books that we seriously question if any place in all England—the metropolis excepted—could boast of a literature so extensive. To judge from its popularity and compact information, we may reasonably suppose that Black's is the best for all practical purposes; still there is valuable stuff contained in them all. Miss Martineau, it is worth mentioning, has written a rather attractive account of the scenery in which she loves to dwell; of which account we might have been better satisfied had it contained less of that ingenious lady's peculiar opinions. For example, she tells the tourist "that he must spend a day on the mountains; and if alone, so much the better. If he knows what it is to spend a day so far above the every-day world, he is aware that it is good to be alone." * To this doctrine we are afraid we must decidedly demur; since long experience has taught us that it is better to travel *in pairs* through all such unfrequented passes either in the English Lakes or over the Scottish Highlands. There is only one other little objection we must make to the guide-books (in most of which, by the way, and as a matter of course, there are many scientific and even topographical inaccuracies), and that is the conceit of comparing the English Lakes with those of Switzerland and Italy. Thus Windermere is the English Zurich; Derwentwater is Lake Como; Ulleswater is Lucerne; and so on. Such fanciful analogies can serve no good purpose. Those who know the continental lakes best will pronounce that neither in "Lake,

* "Complete Guide to the English Lakes," p. 57.

slip, nor cloud," to use Mr. Ruskin's points, is there anything else than a very distant resemblance. The geological character is different; the sky is very different; the climate, of course, is entirely different. Equally out of place, in our opinion, is a comparison with the Scotch lochs, which are possessed of another and distinct order of grandeur. It is Pennant, the prince of tourists, who, if we recollect properly, somewhere very happily applies a story of Queen Elizabeth's time to this very subject. Sir James Melville, the Scotch ambassador at the English court, was one day asked in a jesting manner by the Queen, whether he thought she was as handsome as Mary Queen of Scots was reported to be? "Most gracious lady," replied the wily statesman, "your majesty is the most beautiful woman in England; and my mistress is the most beautiful woman in Scotland!"

It is often a matter of surprise on the part of travellers that the Lake district should be so destitute of those local traditions and ancient ballads with which the rest of the Border country is so profusely enriched. Southey tells us, indeed, by way of hypothesis, "that there is little or nothing of historical or romantic interest belonging to this region; for this part of the country was protected by the Solway and by its natural strength; nor does it appear at any time after it became English to have been troubled with feuds. The inhabitants being left in peace, had therefore neither ballad heroes nor ballad poets, happy in having afforded no field for the one and no materials of this kind for the other." But, with proper submission to so high an authority, we venture to doubt whether this be the true solution; and will continue to wonder that a region so naturally wild and romantic was aboriginally so barren of poetry and folk-lore. It was suggested to us that the whole thing may be accounted for by the destruction of the Derwentwater family; for it would seem that all the poetry and traditions of a highland people must cling, like the lay of the last minstrel, to the parent stock of the great baron or the feudal chief. If we suppose this to be the case, there may even yet be relics of forgotten lays and mountain lyrics still floating about the region. But Southey, unlike Sir Walter Scott, was not the man to collect them. We learned quite by accident in Keswick, that a long Jacobite lament on the gallant Earl of Derwentwater was orally recited by an old woman in the neighbourhood till the day of her death; and that a few stanzas are still remembered by a gentleman of that town who once had the good fortune to hear it.

But if there is a lack of ancient poetry and tradition, it must be owned that the moderns have certainly done their utmost to supply the deficiency. The materials, to be sure, were rich and abundant; but the quarry, if we may use a professional metaphor, has been uncommonly well worked,—particularly on the upper beds. The fact is, the poets have fairly run riot in these Elysian fields. There is scarcely a mountain, hill, or "pike;" there is not a lake, a waterfall, or rivulet; we might almost say there is hardly a tree or rock, on which some of "the Lakers," as Byron contemptuously styled them, have not contrived to affix their seal and superscription. Southey, Wordsworth, Coleridge, Christopher North, Sir Walter Scott, Thomas de Quincey, Hartley Coleridge, Mrs. Radcliffe, Felicia Hemans, Elizabeth Smith, Miss Jewsbury, and a whole legion of minor poets, whose very names would require a catalogue, have here succeeded, to a greater or less extent, in giving to their "airy nothings"

"A local habitation and a name."

Perhaps we shall be told that the gods have not made us poetical when we state, that in our opinion, even the master-minds do not show to the best advantage. We must own, that we got rather tired of Southey's hexameters and Wordsworth's pastorals, when studying them, as the geologist would say, *in situ*. As for the smaller minstrels who have chirped so melodiously on the margin of Grassmere or Buttermere, their rhymes are, for the most part, so licentious and their apostrophes so exaggerated, as to overpower and obliterate whatever meaning they might have otherwise possessed; and they are therefore altogether destructive of the effect which they were intended to produce. Besides, it is rather a hard task on the weary traveller to be told and expected to recollect the names of all the poets who have composed sonnets in praise of this lake or of that waterfall! And the truth is, the mere *description* of external nature, however life-like and beautiful, soon begins to pall even on the most voracious appetite. On the principle that "good wine needs no bush," we may safely assert that the English lakes require no extra-poetic stimulus to excite admiration. Even the most prosaic mind cannot be unconscious of a certain awe and astonishment as he traverses those regions of floods and volcanoes; and the true poet will, we suspect, always feel that the task of connecting such mysterious operations of nature with the beauty of the landscape or the course of human destiny is a task beyond the reach of our poetry, and perhaps of our philosophy.*

But to proceed. The ride from Windermere to Keswick—which is commonly accomplished by means of a mail-coach of the ancient type and three stout horses harnessed abreast, as in the Paddington omnibuses—is one which may well excite the astonishment of even an Alpine traveller. In place of winding round the bases of the mountains like General Wade's excellent military roads in the Scotch Highlands—it seems to have been abruptly led over the haunches of some of the lesser hills. Accordingly, the gradients are in some places so steep as to be rather dangerous, particularly at some of the narrow turnings, such as at Smethwaite Bridge, about five miles from Keswick. We may mention that the Lakers are rather proud of their bridges. "Travellers who may not have been accustomed to pay attention to things so unobtrusive," says Wordsworth, "will excuse me if I point out the proportions between the span and elevation of the arch, the lightness of the parapet, and *the graceful manner in which its curve follows faithfully that of the arch.*"† This may be a very poetical description, and it is almost literally true—the lines of the *extrados* and *entrados*, or of the roadway and archway, seem to be drawn from the same centre, and somewhat resemble the construction of a tubular drain or sewer. We need not point out that "such unobtrusive things" are very difficult to get across; and, indeed, as we have said, they are not unfrequently dangerous.

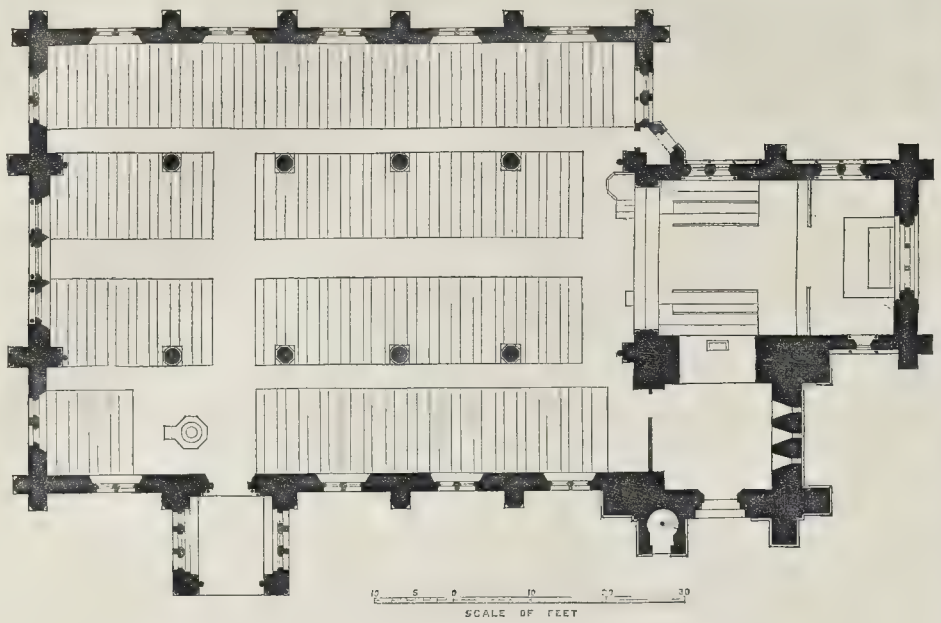
As we go jolting along this mountain pass, we have time to observe the "drystone dykes" or fences of the fields and enclosures. These are all constructed with the peculiar clay slate of the district; and one curious feature they possess is the sloping, flat-arched appearance of the coping, arising from the necessity of laying the stones on the angle of their natural cleavage, thus producing a very pretty *naturalistic* effect. The gate-posts are curious things. All the landed proprietors in the south of England know to their cost the difficulty and expense of providing substantial and durable gate-posts, particularly if the boys in the village are fond of swinging on the gates, after the model of Gainsborough's celebrated picture. But in the Lake district there is no difficulty. The purpose is served by a heavy monolith of clay-slate, for the most part undressed, varying from 2 in. to 4 in. thick, and the breadth of the section of the wall with the hinges sometimes batted in and sometimes fastened through with a bolt and nut. Many elegant and some common-place villas adorn the base of the mountains and the margin of the Lakes, of which we pass in succession Windermere, Rydal Water (where Wordsworth is buried), Grassmere, and Thirlmere or Leathes Water. Some of the churches are rather pretentious modern buildings, particularly that of St. Mary Ambleside, which was completed and consecrated by the Bishop of Chester in 1854. It stands near the centre of the valley, a little to the west of the town, and is built of the dark green stone of the neighbourhood. But the spire is of freestone, and the mullions of the windows, the copings of the buttresses, and the doorways, are also faced with the same material. The steeple is unusually large in proportion to the rest of the building, and has to our taste rather a clumsy effect. The interior is said to be handsome and commodious, consisting of a large central aisle and two smaller ones, and the north-east corner contains a memorial window of Wordsworth. Some of the older churches are very poor structures, particularly that at Wytheburn, hard by the Lake of Thirlmere, which is said to be one of the smallest churches in England; but it really possesses so very little of an ecclesiastical character, that one may easily mistake it for a cottage of the better class, or, at the very most, a school-house. It always occurs to us, regarding these little chapels scattered here and there in a mountain district and amidst a sparse population, to wish that their founders had been somewhat more liberal in the buildings as well as in the endowments. It should be remembered that as to inherent powers of support, they are not to be compared with the lowly *chapelle* of the Mediæval hermit, where prayers and benedictions were constantly required for travellers as well as natives. In Cumberland, we suspect, the architectural student will find the very *reductio ad absurdum* of English ecclesiastical architecture: but we need not dwell on the subject at present. As for the secular buildings, the farm-houses and cottages we passed, they present externally no remarkable feature. They are either built of the dark clay slate or greenstone of the district; sometimes with dressings of freestone in the higher types. Sometimes we observe the buildings are rough cast; sometimes the joints are neatly pointed; but more frequently the rough uneven edges of the untractable building materials are left to face the weather without any finishing. A very common form of chimney-pot, we may mention, consists in the odd-looking combination of four slates with mitred ends: quite an episcopal chimney-pot! There are very few thatched cottages in the district, a circumstance which is doubtless due to the abundance of the different sorts of slate.

At Dunmail Raise, on this road—remarkable as the grave of the last of the Cumbrian kings—just before we reach Thirlmere, we cross the boundary line between Westmoreland and Cumberland. A few miles farther on, after crossing the Naddle valley, the matchless glories of Derwentwater and Bassenthwaite Lake burst into view; and here we reach the picturesque market-town of Keswick, at once the centre and the metropolis of the Lake district; and, as we believe the poet Gray pronounced it, "the Elysium of the North."

Here we shall take a rest; or, rather, give our readers a rest for a day or two.

* We quote a single stanza from Coleridge, which is worth a cartload of the commonplace stuff one meets with so constantly at the Lakes. It is entitled, "A Thought suggested by a View of Saddleback:"—

"On stern Blencathra's perilous height
The winds are tyrannous and strong;
And flashing forth unsteady light
From stern Blencathra's skyey height,
How loud the torrents throng!
Beneath the moon in gentle weather,
They bind the earth and sky together;
But, oh! the sky and all its forms how quiet.
The things that seek the earth, how full of noise and riot!"



Saddleback, we may mention, is a hill of the Skiddaw range, which overlooks the valley of Threlkeld, about 2,800 feet in altitude. Its original and British name is *Blencathra*. The modern pseudonym arises from its peculiar shape when viewed from the neighbourhood of Penrith.

† "Scenery of the Lakes."

ANCIENT CROSSES AT ILKLEY, YORKSHIRE.

A CORRESPONDENT to be relied on, writing from Ilkley, in the West Riding, the *Alicana* of the Romans (where a Roman altar and the remains of forts were found years ago) writes,—"Here, in this out-of-the-way corner of the world—for we are a long journey from York—we have fallen upon the remains of three ancient crosses. They are standing erect on the south side of the churchyard, exposed to the tender mercies of all passers-by, and to the drippings from the overhanging trees. They are carved out of the sandstone abounding in the neighbourhood, a coarse-grained perishable material, and they look as if rapidly melting away even beneath one's gaze. We had previously bought a photograph of the crosses, judging from which, I expected to find them in a much better state of preservation; so that, I fear, if they have deteriorated so rapidly since the photo. was taken, they will soon vanish altogether, unless some speedy method of protecting them be adopted. They ought to have some shelter from the weather, as well as a railing all round to keep off injuries, wilful or accidental. I do not see how it is to be managed, but something ought to be done, and quickly too, to preserve these interesting relics. Ilkley church was lengthened, and the chancel built, some two years since. The ancient stones of which I am speaking are rectangular columns tapering to the top, not with cross-heads like those at Monasterboice; and are covered with knot and scroll work, including some human figures."

We commend our correspondent's letter to the attention of the incumbent and churchwardens of Ilkley in the first place; and of all who are interested in the preservation of our national antiquities, in the second.

ST. ANDREW'S, HILLINGDON.—*Plan.*

INDICATIONS OF HEALTH AND DISEASE.

The death-rate at this time of the year should be carefully watched, especially when we consider the peculiar nature of this year's summer. In the second week of August the number of deaths in the metropolis over the average was 63,—not a large number, certainly, when the immense extent of the population is taken into consideration. The deaths from diarrhœa were 228; and there were 22 deaths from cholera. It is worth while to consider the large number of deaths from diarrhœa which have occurred in the eastern districts of London, for instance. In Shoreditch there were 18 deaths; in Bethnal-green, 9; Whitechapel, 10; in St. George's-in-the-East, 9; in Stepney, 6; in Mile-end Old-town, 13; and in Poplar, 11: in all 76 deaths from diarrhœa; and it is to be observed that of the 228 deaths throughout the whole metropolis from diarrhœa, there were only 24 adults, and all the remainder were infants.

As a natural result of bad sanitary and other conditions, we find the deaths from diarrhœa large in some other districts. For example, there were 11 deaths in Lambeth, 13 in Greenwich, and 10 in Islington. The last-named parish, and, in fact, all the other places in which these deaths occur, should be carefully watched from week to week.

In addition to sanitary matters, the effect of meteorology on health is a matter which deserves far more study than it has yet obtained. Dr. Dundas Thomson—that able and active worker for the public good, and whose loss we deplore,—amongst his numerous and varied pursuits, earnestly directed his attention to this subject; and a section of the Manchester and Salford Association has done much in this way; but co-operation, and a central deposit where the reports could be classified and reduced to order, are still greatly needed. The inquiry should be divided into the following heads:—1. The meteorology of districts. 2. Influence of atmospheric changes upon disease. 3. Comparison between the health of Liverpool, Manchester, Leeds, Newcastle-on-Tyne, &c., &c., and the various London districts, as regards diarrhœa. It was observed, as far back as 1859—and the fact has since been in the main confirmed—that this complaint increases with the rise and fall of the temperature. When the temperature first rises above 60 degrees, the great impulse is given to this disease; and it is when the temperature remains long above that point, that a great number of cases of diarrhœa may be expected. Generally true as this is, it should not be forgotten that in all kinds of weather this disorder is rendered more fatal by sanitary neglects, and by a want of proper attention to food and clothing. We shall, as time passes on, increase and improve in this and other kinds of knowledge which affect not only human health, but also that of animals required for food. We have always had faith that ere long we shall acquire the means of discovering, in a tangible shape, those conditions of the atmosphere which produce disorders; and we are glad to see several indications of this: for, although men of science may be exploring other fields, their painstaking observation leads to the improvement of instruments, and affords hints to those who would fain be able to see the peculiarities of variously polluted atmospheres. As an instance, for five years a discussion has been going on respecting the theory of spontaneous generation. One of the last and most interesting papers on this subject, is by M. Pouchet. In connexion with this discussion, M. Coste, after stating that when a certain quantity of hay was left to macerate in the water, a pellicle was found on the surface, asserted that that did not generate monads, vibrios, or bacterias,—all animalcules as M. Pouchet affirmed,—because these infusoria made their appearance in the liquid before the pellicle was found. To this M. Pouchet replies, that the latter is the real generator, but that some infusoria do make their appearance in the water before the pellicle. The inference, however, which M. Coste draws from this, M. Pouchet declares to be erroneous. A meadow is but an immense field of maceration, where incalucable legions of infusoria pullulate. Their eggs and kysts or chrysales stick to the stems and leaves of the graminaceous plants that constitute hay, and may produce animalcules almost as soon as the latter are put into the water.* So far, then, there is no great difference between these conflicting authorities, except that M. Pouchet says the number of infusoria created in this way is very small in comparison with the animalcules issuing from the proligerous stroma. M. Pouchet advances several arguments which strongly support his theory, and which have much interest; but our present object is more especially to direct attention to the marvellous nature of the observations which have been made during the investigation of this matter by the Parisian naturalists, by means of the microscope. M. Pouchet reminds M. Coste of the peculiarities and appearance of those living creatures which are far more minute than the finest grain of sand to be found on the seashore.

* Have not the animalcules generated in hay something to do with the production of "hay fever?"

HILLINGDON NEW CHURCH.

The new church of St. Andrew, Hillingdon, the foundation stone of which was recently laid, is situate in the parish of Hillingdon, adjoining the township of Uxbridge, Middlesex, and is being erected on a very eligible site, close to the main road to London. The principal material of the walls is brick, procured from the locality, and of two colours, the yellow pavior bricks used for the surface work, and the best red kiln-burnt bricks for patterns and a portion of the quoins; the remainder, as well as such parts as were necessarily of stone, being from the Box quarries. The way in which these materials are employed can be judged of better by a reference to our engraving than by any mere description. The tower is placed at the end of the south aisle, and on the south side of the chancel, its lower part serving as a vestry. It is surmounted by a broach spire of oak shingles, ranged in horizontal bands, and having lucarnes upon the cardinal faces. The general arrangement of the building is shown on our ground plan, the accommodation being for about 700 persons. The total cost is expected to be about 8,000*l.*, and the fund is chiefly raised by voluntary subscription. The chancel, however, is to be erected as a memorial to a lady, by her sister, who has also promised stained glass for the east window, &c. The font will be given by the Vicar, the Rev. R. Croft; and the pulpit and lectern by the contractors. The church is expected to be finished in the May of next year. The architect is Mr. G. G. Scott; and the builders are Messrs. Fassnidge & Son, of Uxbridge, who have contracted for the whole of the work.

ST. ANDREW'S, HILLINGDON, MIDDLESEX.—Mr. G. G. Scott, R.A., Architect.

MORE INDUCEMENTS FOR ART WORKMEN.

THE ARCHITECTURAL MUSEUM.

We would point out, in case the advertisement should escape notice, that the council of the Architectural Museum offer a first prize of 20*l.* for the best, and a second prize of 10*l.* for the next best carving of a pulpit panel in oak, the subject being "The Good Samaritan," executed in relief, architecturally treated, and with appropriate mouldings. Note: The use of sand-paper will be considered as a disqualification for the prizes. They also offer a first prize of 10*l.* for the best, and Mr. H. Heather Bigg offers a second prize of 5*l.* 5s. for the next best reproduction in silver, on a reduced scale, of a cast in the Architectural Museum collection representing a group of leaves. The special object of this prize is to encourage hand-tooling or chasing.

A prize of 10*l.*, given by the Ecclesiological Society and Mr. Beresford Hope, is offered for a small rosette, executed in transparent enamels on silver. The colours are to be of not less than nine separate tints. The silver need not be sunk to a depth of more than 1-30th of an inch. Another prize of 10*l.*, given by Mr. Ruskin, is offered for a similar rosette, executed in opaque enamels on a ground of copper; the copper to be hollowed to the depth of not less than 1-16th of an inch, and the metal surfaces to be fire-gilt. It is to be hoped that some of our art-workmen will go in for these premiums, determined to win; not doing what they may think just enough, but everything possible. Any man of ability who does so, and produces a really good thing, may depend on its leading to advancement.

The specimens will remain the property of the art-workmen or their employers, and will be exhibited.

The advertisement will show where more precise particulars of the competition may be obtained.

CAUSES OF DEATH IN THE PRIME OF LIFE.

In submitting a list of candidates for election into the Infant Orphan Asylum, at Wanstead, an account is given of the causes of death and the pursuits in life of the fathers of the children for whom admission is sought. From this we gather some idea of the overwhelming majority of fatal cases of consumption in the prime of life. In the paper referred to, there are given the names and other particulars of the fathers of 118 children. Of these, 34 are reported to have died of consumption, 15 of disease of the heart, and 10 of fever,—in all from these causes, fifty-nine, or about half the number of deaths. And it is worth while to notice the pursuits of those who have died from the first and most extensive cause, and consider to what extent the fatal result has been produced by sedentary occupations, the ill effect of which has been increased by unwholesome shops, offices, &c. The subject is well worth far more extended inquiry than we can make at present; but believing, as we do, with some medical men, that consumption is much more affected by impure air and imperfect ventilation than has been generally supposed, we but glance at the subject, in the hope that it may lead to more extensive inquiry into this matter than is within the means of the present writer. Of those thirty-four deaths, there were two of saddlers; two of mercantile clerks; a baker and confectioner, boot-tree maker, surgeon, solicitor's clerk, draper, clerk to a proctor, butcher, solicitor's managing clerk, Trinity pilot, two builders, bank clerk, an accountant, chief commissioner of gold mines in the Brazils, innkeeper, statuary, secretary to gasworks, inspector of insurance agents, Government engineering clerk, mercantile clerk, warehouseman, another clerk, a machinist, a plumber and glazier, silversmith's assistant, commercial clerk, sergeant-major in the army, another commercial clerk, a merchant's clerk, and a lay vicar at a cathedral.

It is worth while to notice that no less than fourteen of the above number come under the class of clerks, secretaries, and such like.

Of those who died of disease of the heart there were two clergymen, a surgeon, a house decorator, a cheesemonger, a grocer, a banker's clerk, a law stationer and accountant, a master law-writer, clerk at a railway terminus, an organist and professor of music, a harness-maker, surveyor, bank clerk, and farmer.

Of those who died of fever, there were a clerk at the General Post Office, a warehouseman, an artist, a clerk of the Bank of England, schoolmaster at a reformatory, ribbon warehouseman, an officer of Inland Revenue, a chemist, and a schoolmaster.

Next in order of fatality is bronchitis, to which four deaths are attributed. Of the other causes of death there are—cancer, paralysis, drowning, epilepsy, sudden death, accident, cold, and other fatal causes; but in no case are there more than one, two, or three deaths from any one especial cause, except in the instances already mentioned,—a circumstance which seems to show that, as regards the death of male adults in the prime of life, consumption, heart-disease, and fever are the most dangerous enemies we have to contend with. We have looked at this very important matter from a limited point of view; but if it should be shown by more extensive statistics that our remarks are right, they should lead to inquiries which would have useful and practical results.

THE IMPROPER MANAGEMENT OF CHILDREN.

There can be no doubt that while neglected drainage and other evil sanitary conditions kill thousands, bad management and want of knowledge of the laws of health also destroy multitudes. In the nursing and rearing of children old-fashioned notions prevail. Fortunately some of these are passing away; but, in the meanwhile, their observance is attended with mischief and danger.

The medical attendants of the large masses of the industrious and poorer classes know the difficulty of getting the plainest rules attended to; and the physicians at the Children's Hospital, Great Ormond-street, could make curious revelations as to the food which is given to sick children. Matters which the strongest stomach could not well digest are given to delicate infants: there is loss of life by the narcotic preparations which are administered to promote *quietness:* infants sucking at the breast are supplied with draughts of porter, or drops of gin; and we know of cases in which children have been actually dwarfed in growth by such vile practices. Some children are kept at the breast until they are two years and sometimes three years of age, when this their chief supply of food becomes poison. In times of sickness, the directions of the medical attendant are often neglected; and, in a spirit of mistaken kindness, things are given to sick children which are perfectly preposterous; but the cause of the consequent aggravation of the disease is too often not known to the medical adviser. An idea that it is cruel to apply mustard poultices, blisters, &c., causes these applications when ordered, to be often so long delayed, or so ill-applied, that inflammation has got a-head and it is impossible to save life.

By the manner in which many children are clad danger is caused in this uncertain climate. Even with some to whom the cost is not much a matter of consideration, it is customary to leave a large part of the shoulders and chest of their children, as well as their lower limbs, exposed; and in this way is produced the germ of fatal diseases. When serious attacks of cold have resulted from such treatment, the chest is often covered with flannel; but it does not seem to be generally known that for the protection of the lungs the careful covering of the back between the shoulders is of quite as much importance.

Except amongst the most careless of mothers, it is usual to contrive somehow a bath for the infant every day; but when the child has grown to be about seven or eight years old, this healthy practice is neglected, and only the face and hands are washed, except on rare occasions. We know the difficulty which there is to do what is right in this way in thousands of the homes of the very poorest classes; but proper care in keeping the skin clean is far too often neglected, when by a little contrivance and trouble this important means of health might be made available. The same may be said about the clothing of children, a great portion of which is often left unwashed for weeks together. Sometimes it is allowed to wear away without the application of soap at all; and it is by no means uncommon to hear persons say, when choosing dresses, &c., for the children,—"Let me have something dark that will hide the dirt." With a supply of untainted air, well washed skins and clothing of proper form, and a judicious supply of food, we should not have one half of the present extent of mortality amongst children.

COUNTRY HOMES FOR ARTISANS.

By the Great Eastern Metropolitan Extension Act, which has recently become law, the company undertakes to run a train from Edmonton and Walthamstow to Liverpool-street, in the City, every morning before seven o'clock, and back again every evening at six o'clock, as may be most convenient for artisans, mechanics, and labourers, at a charge of not above a penny per journey; but they are not to be compelled to issue such tickets for a less period than one week, nor without reasonable satisfaction that applicants are of the working classes, for which they may demand name and address of both applicant and employer; and in case of accident, the company are not to be liable to any claim for compensation for injury of passengers beyond 100*l.* This arrangement will afford an opportunity of testing the possibility of providing homes for the working classes away from the smoke and overcrowding of London; and we hope that the occasion will not be lost sight of, and that by one means or another, and with the opening of the City terminus, there may be a number of suitable dwellings erected, affording accommodation to families at the rent of from 4s. to 5s. a week each. The price of land at Edmonton and Walthamstow at present should not prevent this from being easily carried out.

THE ACCIDENT ON THE NORTH LONDON RAILWAY.

Without wishing to say anything which may bias the verdict of the jury that has been empanelled to inquire into the cause of this remarkable accident, we will glance at some of the points of the evidence, which are not only curious but also well worthy of attention.

The explosion took place at the Camden Station, and the ponderous locomotive was precipitated from the viaduct on to the ground below. The fireman was found in a dying state not far from the scene of the accident.

Robert Grey, the foreman of the locomotive shop of the North London Railway, stated before the coroner, that the engine which exploded (No. 4) was about ten years old; and the company had ten other engines of the same age and class. In reply to the coroner, this witness said that he had never seen an accident of this description before; nor could he account for it. The engine was thoroughly repaired and tested two years ago: the engines were not examined more than once in two years. This engine had not been often under repair. He had examined the engine and found no defects in the structure. The inner copper fire-place had given way. The top stays were broken, and the rest was blown through to the copper. Notwithstanding this evidence, the witness says, that when the stays were examined two years ago, they were sound, *and so they are now.* At the back of the fire-box, there was a small star-crack that was repaired, and a copper patch put upon it, which is there now.

Mr. Adams, the locomotive superintendent, reported that he was well acquainted with the No. 4 engine, and was not aware of any defects in it. He, however, added that "he had examined the engine since the accident: *one side of the fire-box was torn away from the back and top sides.*" He could not see any thinning of the metals to account for the accident. The thickness of the fire-box plates varies from three-eighths to half an inch: this was originally three-eighths, and it was *worn away one-sixth.*

If in some locomotives it is considered necessary for safety that the fire-box plates be half an inch in thickness, this evidence shows that in the first instance the fire-box had been of the thinnest kind of plate in use for this purpose; and that it had been still further reduced, by wear, to the extent of a sixteenth of an inch. There was nothing to show that shortness of water or more than the usual pressure was the occasion of the explosion; but Mr. Adams said that if the fire-box gave, the water would rush in and cause the accident. This gentleman denied that the engines on the North London line do double the work of those on other lines. He reported that the average working is about sixteen hours per day, but that this engine had not run for sixteen hours per day for ten years. She had run about 291,508 miles. This enormous quantity of work for a single engine to perform will surprise many.

There can be little doubt that this venerable engine has been over-worked; and Mr. Adams

himself acknowledges that "it is heavy work for the working parts of the engines: our work is heavier than on the North-Western or Great Western Railways." A juror remarked, that he would not like to stand upon an engine that was five years of age, far less ten.

Old engines and, in fact, those of moderate age, should be inspected more frequently than once in two years, especially those in which thin plates are used; and were the whole system of railway management brought under public consideration, it would be an important question whether the periodical inspection of engines, on the good condition of which the public safety so much depends, should be entrusted to the servants of the companies themselves, and not rather to independent officials. This will be objected to in consequence of the expense; but it may, however, be worth while to consider whether the saving on the cost of accidents, and the increase of the number of passengers who would be attracted by the greater safety, would not cover the cost of doing what is right.

DRUIDICAL FESTIVAL AT LLANDUDNO.

The pavilion of the Eisteddfod, and the stone circle of the Gorsedd, have this year been erected at Llandudno. The pavilion is octagonal, and occupies an area of about 4,000 square yards. It is covered with felt; and in its construction there has been used 6,000 cubic ft. of wood, 5 tons of iron, 4,500 yards of felt, 250 yards of calico for windows, and as much red cloth for first-class seats. Mr. Pritchard is the contractor, and Mr. G. Felton the architect; both of Llandudno. The ancient Gorsedd, for conferring the bardic degrees of ovate, bard, and druid, for prose, poetry, and religion, consists of a circle of twelve stones, and a central slab, table, altar, or "stone of power," erected on four other stones, and called the throne. "Other three stones *run out of the circle*, towards the east," and are supposed to form, with the throne, or central one, the following geometrical and once highly sacred symbol:—

which very much resembles the Government's broad arrow (in this case pointing, as it were, to the centre of the circle); and it is a curious fact that the ancient Gorsedd formed the Parliament, whence the laws, emanating from the theocratic throne of the oracle, were promulgated. The bardic circle, or ancient House of *Lords*, as it were, is surrounded by an iron railing, "to protect its sacredness against the intrusion of the uninitiated multitude,"—the mere "Commons." The *North Wales Chronicle*, to which we are indebted for the description whence we extract these particulars, states that the object of this annual festival is "to excite mentality." It is said to have been annually held, for 1,200 years, "in the face of the *Sun* and the Eye of *Light*."

NEW DOCKS.

The large timber-dock, at Hartlepool, in connexion with the West Hartlepool Company, has been completed, and the water run into it, in the presence of numerous spectators. The dock is about three acres in extent, and connects the former dock with the large pond at the north of the Slake. The engineer was Mr. R. Murray, and the contractors were Messrs. Bell & Mitchell, of West Hartlepool.——The foundation-stone of the docks at Hubberston, Milford Haven, has been laid with some ceremony. Hubberston docks will contain a dry and graving dock, 420 ft. long by 60 ft. wide, and the enclosed waters of Hubberston Pill will furnish an area of ten acres below the present opening bridge, in which vessels of the greatest burthen may float and come alongside the quays, while about twenty-two acres of water area above the bridge will be available for craft of a smaller tonnage.——By the report of the select committee on dock accommodation at Devonport and Keyham, it appears that some of the witnesses think that two additional first-class docks are required here; others think three. The south basin, 7 acres 32 perches, has, during the last year, been deepened 6 ft.: it is now 25 ft. deep, but it can be deepened by pumping to 28 ft. The north basin, 5 acres, is being enlarged in a northerly direction to, say, 10 acres. The side of the northern boundary-wall next the basin has been finished with wrought stone, water-tight: the side to the north, distant 60 ft., is faced with the rough stone from the buildings of the old gunpowder magazine. There is some discussion about the possibility of placing one dock inside the other, as in some of the Russian arsenals, by which mode the level of the platform of the inner dock is considerably higher than that of the outer. Then there is a difference of opinion as to whether the dock should run north and south, parallel with the Hamoaze, or at right angles with that harbour, like those already constructed inside the basins both at Devonport and Keyham.

A HINT TO PARLIAMENT MEN.

We would say a word in season to members of both Houses who are wandering in search of renewed health and strength over their own broad acres, or travelling by steamships or by rail to distant climes: especially, however, to those who are enjoying their ease at home. Let them remember that there is great work to be done in rural districts. The game preserves have interest, and so have the gardens and the woods; but it would be well to look at the hamlets and villages where the working men and women live;—to inquire in the villages how the manure of all kinds can be removed, so that it may be beneficial to the land and not injurious to human life;—to study if villages could be supplied with good water at a cheap rate. Much good might be done in this way to man as well as to beasts. There is also a quantity of human game in the rural districts to be hunted up, and the amount of labour necessary for this purpose would be well repaid by the results. Schools, therefore, and other institutions of an improving nature, should be watched by Parliament men during the recess; nor should farmhouses and the general drainage of the land be neglected.

ARRAS.

This fine old city, now on the railway line from Paris to Calais, and ninety-one miles distant from the latter, is rarely visited by English tourists; yet it has some interesting and singular monuments well worth viewing. The most important are certainly the town-hall, and the place where it stands, called the Petite-place. This latter is remarkable, for the three sides of the parallelogram, being built on arcades, the columns of which, about 9 feet high, are all monoliths, diminish from the middle towards the base as well as towards the cap: in fact, they are of English rolling-pin form.

The houses built upon them are mostly narrow fronted, with gables, all of the same design.

Adjoining is another open place, called La Grande-place, also having three of its sides built on similar arcades, but the houses here have not the same regularity of frontage.

From the restoration of the Hôtel de Ville, the additions made and making to it, as well as the erection of a new church, nearly finished, and the completion of an elaborate chapel, Arras must be a wealthy city; and of these operations M. Gligny, architect, has the direction.

In the façade of the Hôtel de Ville, the great bay window and its balcony are renewed in its sculpture with extreme delicacy. Behind this, new erections of some extent have been added in the style of the Renaissance, with an almost overdone profusion of sculptured details. A similar addition to the right is intended, and tenders are invited, not to exceed 271,000 francs.

The Chapel of the Holy Sacrament, by the architect Gligny, has been finished and opened for public service. Externally it has no particular feature, excepting that a somewhat heavy spire, crocketed, is perched upon eight remarkably slender columns. The high altar, in the interior, is of the richest Gothic, the stonework being almost carved as lace. To the chapel is attached a convent for fifty ladies of good birth, some of whom are constantly at prayer, night and day, without intermission.

Near the Porte Napoleon, in the street leading from the railway station, M. Gligny is constructing a new church called the Ursulines'. The tower and church are completed as far as the stonework. The tower or spire is about 120 feet high, and as narrow, almost, as an obelisk, constructed in eight stories, including the pinnacle. The lower six stages are square, whence they become round: at the angles are placed large carved emblems of lions, tigers, and others. The whole of these stages or stories are decorated with Gothic arcading and crocketed pediments. The remarkable slenderness of this tower, in proportion to its height, makes it somewhat resemble that of St. Benigne, at Dijon, but the latter is constructed of wood and this is of stone.

The cathedral is also a new edifice of large dimensions, in the Roman style of architecture, entered by a flight of nearly forty steps. It has no feature worth noticing.

CHARITABLE COMMITTEES AND ARCHITECTS.

Did you, Mr. Editor, take a peep at one of the competition advertisements in the last number of your paper, wherein a certain party, calling themselves *charitable* trustees (Oh, shades of architects gone, that architects present should throw themselves upon such charity!), after describing the ground in yards, and saying that the church should accommodate 1,000 persons comfortably, and not cost more than 5,000*l.*, ask for five drawings, also an estimate of the cost, for which 50*l.* will be given to the lucky competitor whose design best meets with the charitable approval of the charitable trustees. Why need architects now complain of not getting rich with such charitable means thrust upon them to become so? But this is the old complaint. Hearken to what follows, youthful T squares. The charitable trustees "will not necessarily employ you, but will be disposed to *treat* with you for that purpose," whatever that may threaten. Listen, further. What rewards are the so-called unlucky T-squares (qy.) to receive? Why, this? Their drawings "will be returned by the usual conveyances, but the charitable trustees will not be responsible for their safe delivery, nor for any payment to the owners in respect of such plans, *or of the adoption of any part of any of them in the erection of the church.*" Do my wits deceive me? Is it possible that the charitable trustees intend picking out from one design (of course presuming they receive any) the tit-bits that may tickle their fancy, and adding them to another? Very honest, certainly; not to say charitable.

Sid.

INSTRUCTION IN BUILDING OPERATIONS.

Owing to the trades' unions, building workmen have become totally indifferent as to the manner in which they execute their work. It is high time some steps were taken to check this state of things; and, as a large portion of the contractors of the present day have risen from the ranks, our position as architects has become fearful. We add clause after clause to our specifications, until they become disagreeably voluminous, but all to no purpose; and litigation is commonly the result. It has occurred to me that a great service would be done to the profession and to the public, by the issue of a work on the mechanical operations of the several branches of the building trade; and as every county has some description of work peculiar to the locality, it should be included; which could easily be effected, as architectural associations have been established in all important towns throughout the kingdom, and their co-operation would be essential. This work, which should also have a copious glossary of terms, would be a standard book of reference, and could be made the means of settling many of the tiresome quibbles that arise between architects and ignorant or quirking contractors, by assuming that the descriptive matter in the same should, in the absence of anything to the contrary in specification, indicate the manner in which the work must be executed. Formerly, established custom decided the case, but now the *custom* is to scamp; and proper workmanship is the exception. There is also another grievance which might well be entertained at the same time. It has become common in every department to endeavour to set up new customs in reference to admeasurement. Should you perchance have appended to your contract a schedule of prices which may seem fair and reasonable, you will find on measuring day that the tradesman will insist upon some outrageous system of taking dimensions, that will give him an advantage of 10 to 20 per cent.; and, with many young architects who are inexperienced surveyors, he carries his point. There is much valuable matter in "Nicholson's Practical Builder" which might form the basis of the

work, selecting only the purely operative portion, and enlarging upon it in such a manner as to leave nothing unexplained. For instance, in joiners' and carpenters' work, the manner of seasoning and preparing timber for use, the quality of nails, screws, &c.; the proper quantity and description for the different kinds of work; in ironmongery, the several qualities to be properly described. Most articles in that department have three, as in hinges, which by the trade are classified as light, best, and best best. All this may seem trifling to the inexperienced, but with men of practical knowledge it is not unlikely it may lead to a serious consideration and some beneficial results. Z.

CASTELL DINAS BRÂN.

I think your correspondent who gives an account of Castell Dinas Brân, p. 545, *ante* (23rd July), is in error in supposing the remains of groining at the gateway to have been the chapel. It is without doubt the entrance gateway itself: and the rough vaulted passage beside it is a side-chamber of the gatehouse. The mouldings of the groining over the gateway entrance are now entirely defaced; but some of the voussoirs were some years ago preserved in a house near the foot of the castle-hill. One of them is in my possession, and shows a very fine and bold section of Early Decorated date. The foundations and part of the lower story of the two round towers flanking the gateway remain, but are not noticed by your correspondent: on one of them can be traced a corbel head, very much mutilated, to carry one of the outer arches of the entrance; and on one of the blocks of freestone under the two bays of groining is a trace of the groove for the portcullis. I have never been able to ascertain when or by whom the castle was destroyed; but as it has long lain in ruins, it has been suggested that it is one of those destroyed by Owain Glendwr, who was also educated as a squire within its walls. The evidences of a thorough and wilful destruction are everywhere apparent, the walls having been undermined and thrown outwards. The inner wall of the hall was probably of wood, as there are now no traces of a stone wall next the court-yard. Much of the freestone has been picked out of the walls, to build hearths and ovens for the neighbouring cottages, as it does not fracture with heat.

E. W. C.

SUGGESTIONS AND CALCULATIONS FOR PEALS OF BELLS.

It has occurred several times to the writer, a sexagenarian campanologist, that the dreary monotony of one bell (liberally changed by Mr. Walters, Miss Burdett Coutts, and a very limited number of new church builders) arises (here) from uninformed fear of expense, quite as much as from want of obtainable funds or of liberality. Worthy "George Herbert" says,—

> "Sundays revere; think when the bells—
> 'Tis angels' music"—do *chime*.

He could not, therefore, have referred to the half-funereal tone—omitting the "hollow mockery" of a tower, single, in a campanological sense,—of one Sunday bell; and that sometimes, as at "St. Matthew's, City-road," shrill to feebleness, perhaps weighing 6 cwt. "Ringing," also, is entirely pretermitted.

To humbly, therefore, offer a remedy for this, I have made calculations, which I believe to be quite sound, with experience of "proportions," for peals of quite moderate size and weight,—which could, of course, be increased in "round numbers." Bell-metal being usually 8*l.* 8s. per 112 lb., and "frames and fixings" averaging from 14*l.* to 18*l.* per bell, and I believe about 6*l.* per cwt. being allowed for old metal when that exists. Three bells, tenor 9 cwt., 230*l.*; four bells, 11 cwt. tenor, 335*l.*; six bells, 15 cwt. tenor, 580*l.*; eight bells, 21 cwt. tenor, 890*l.*

P.

RHYD COURT.

Sir,—I shall be obliged to you to insert in your next a slip which appeared in the last Number in reference to the alterations at Sir Edmund Lechmere's. A paragraph says,—

"The residence of Sir Edmund Lechmere, Bart., at the Rhyd, has been undergoing some alterations and additions under the direction of Mr. Brandon, architect."

The works at the Rhyd were carried out under my direction, at a cost of from 4,000*l.* to 5,000*l.*

A small chapel is now, I understand, being built there, under the direction of an architect engaged in the locality.

D. Brandon.

COMPETITIONS.

Chester Town-hall.—Messrs. Lanyon, Lynn, & Lanyon, having re-asserted their opinion, that the design, "Love's Labour" can be carried out for 16,000*l.*, and Mr. Heffer having sent a tender from a builder to execute "Deva" for 15,529*l.*, the Town Council have decided on paying the premiums to these gentlemen, and have authorised a committee to confer with the authors of the first design.

We have been called to an account by an intemperate correspondent for not condemning the decision. We will let "A Competitor" give our reason for not taking, at present, at any rate, an antagonistic position:—

After the cry that has been raised to have architectural competitions referred to members of the profession, where this has been adopted, and the report submitted has been acted upon, I cannot see what more can be expected of the Chester Town Council; while, if well-known members in the profession engaged on such occasions are to be censured for their decisions (not forgetting the late Kensington Museum Competition), these gentlemen, for whose judgment we, as architects, ought to pay the greatest deference, will have to decline the unenviable task of sitting in judgment on architects' designs, and leave the profession at the mercy of amateurs.—T. M.

Peterborough.—The Rev. E. Davys, of Peterborough, advertised a premium of 20*l.* for the best design for a pair of semi-detached villas, capable of being erected for 800*l.* A large number of designs were submitted, and that by Mr. T. C. Sorby, of London, has been selected, and is to be carried into execution at Peterborough, by Messrs. Ruddle & Thompson, builders.

Durham Permanent Investment Society.—Working Men's Cottages.—The first premium, 10*l.* 10s., has been awarded to "Severnonian;" and the second, 5*l.* 5s., to (motto, "Durham,") Messrs. Smith & Paine, architects, London.

WATER SUPPLY.

The Sowerby Bridge Water-works, Halifax, have been opened. These works have been laid out by the local Board of Health at the cost of about 6,000*l.* The water will be supplied by the Halifax corporation.——The inhabitants of Bradford, says the local *Observer*, may felicitate themselves upon their very favourable position at this juncture with regard to a supply of water. Whilst their neighbours on every hand are suffering from thirst, they have enough and to spare. At Halifax several establishments have been brought to a standstill for want of this necessary: the inhabitants are stinted in their supply, and cautioned against using improvidently what they get: the streets and the gardens go unwatered; and the corporation have been fain to borrow water-carts from their neighbours, in order to gather up from private sources water for the domestic use of the burgesses. We read in the papers of other places that are similarly suffering from a famine of water.—— At a recent meeting of the Cockermouth local Board to take into consideration the best means of supplying the town with water, from one of the schemes suggested by Mr. Lawson, C.E., Mr. Pearson proposed that the Cocker scheme be adopted, and Mr. Burnett seconded the motion. Mr. Walker was about to propose an amendment in favour of the Wythop scheme, when Mr. Bowerbank said that at first he was much in favour of the Wythop scheme, but since he had made inquiries he was convinced that there could not be an adequate quantity of water to supply the town. Mr. Walker replied that he was confident that there was enough water to supply all Cumberland. The motion was then put to the meeting, and passed unanimously. The clerk was instructed to communicate with Mr. Lawson, intimating the decision of the Board.

TARGETS.

Sir,—Allow me, through the medium of the *Builder*, to lay before the public the following simple method of marking which occurred to me some months ago, and the adoption of which could not fail to prevent a recurrence of such deplorable accidents as that which lately happened at the Wimbledon rifle-ground.

I propose that the ordinary shot-proof targets now used should be painted alike on both sides, and made to revolve on pivots in a strong framework of iron. I would then place the covering for the marker *beside* the target instead of in front of it, so that (as soon as the ring of a bullet announced to him that it had been hit) he might turn it completely round without leaving his post, thus presenting a fresh side to the shooters, and giving himself an opportunity of safely painting out the mark of the shot as soon as he had declared its effect by showing a flag in the usual manner.

The additional cost of adopting such a system would, I should think, be comparatively trifling, while it would place the marker in the most perfect safety.

An Amateur.

CHURCH-BUILDING NEWS.

Bacton (*Suffolk*).—The church of this parish has, during the past few months, undergone extensive renovation, both interior and exterior. A survey having been made by Mr. Butterfield, of London, architect, plans were prepared, and a contract was entered into by Mr. Elliston, of Sudbury. The external walls have been stripped of the plaster which disfigured them, and the stone work of several of the windows has been renewed. The roof of the nave was generally in good preservation, and wherever any defect existed it has been so restored that inspection is needed to distinguish the new from the old work. The first bay from the chancel has been painted a bright red and white. The spandrels of the chancel arch were formerly similarly decorated; and it is proposed, if possible, to restore the painting. The principal change made in the interior is the substitution of benches for the old pews, and new doors and a new pulpit will replace the old ones. The font has also been restored. The church will be re-opened in the course of a few weeks.

Tewkesbury.—The Abbey Church is to be restored by Mr. Scott. An influential meeting has been held in the vestry room of the church to take into consideration the best means to be adopted towards the restoration of the fabric. Mr. Scott attended, and gave an elaborate architectural history of the building, and his opinion of the repairs and restoration which would be necessary. He was not prepared with the estimate as to the cost, but promised to supply that at a future day. It was resolved: "That the most strenuous efforts should be made to raise sufficient funds to carry out, as far as practicable, the suggestions of Mr. Scott, by an appeal to the inhabitants of Tewkesbury and its surrounding neighbourhood, and to the admirers of church architecture throughout the kingdom, and that Mr. Scott be requested to make a careful and detailed estimate of the probable expenses of effecting the restoration in accordance with his views."

Bawtry (*Yorkshire*).—Scrooby Church has been restored and re-opened. All the interior has been swept away. The south aisle is divided from the nave by three arches. The east window, which was formerly square-headed, is now slightly perpendicular with Gothic arches, the pattern from a window in Henry VII.'s Chapel, Westminster. It contains four compartments below and eight above. The pillars sustaining the Gothic arch on the entrance into the chancel have some moulded caps. The tower arch is of the early perpendicular style. The west window, which was once blocked up, is of the same character, and is open. The pulpit is of Bath stone panelled, two compartments of which are carved. All the windows, with the exception of those mentioned, are of three lights, and are filled with cathedral-tinted glass, edged with plain crown glass. The altar-table is covered with crimson silk velvet with straw-coloured silk fringe. The architect employed was Mr. Neale, of Mansfield, and the contractors were Messrs. Lee & Tomlinson, of Retford. The expenditure exceeds 600*l.*

Kirkstall (*Yorkshire*).—St. Stephen's Church has been reopened for divine service. For upwards of twelve months workmen have been engaged in making alterations in the form, arrangement, and architectural character of this church. Its original form was a parallelogram, with high-backed pews, some square with brass rods and red curtains; plain flat plaster ceiling, three galleries, the west one being very deep, with the organ in it. These and other obstructions have been removed, and the interior made to consist of a nave 60 ft. in length, 23 ft. in width, and 42 ft. in height to the apex of the roof; north and south aisles, each 60 ft. by 12 ft. and 30 ft. high; north and south transepts 32 ft. by 21 ft. and 25 ft. high, with aisles on each side of them, and a chancel 38 ft. by 23 ft. and 38 ft. high. The nave arcades have each six bays with clustered piers, moulded capital arches and labels. The chancel arch is lofty, the piers clustered with moulded capitals, &c. The chancel is separated from the transepts by an arcade on each side of three bays, the piers, capitals, and arches being treated similar to those in the nave. The whole of the chancel is laid with tiles of a geometric pattern, red, black, and yellow. The new roofs to the chancel and transepts are open timbered with curved ribs resting on hammer-beam spandrels and braces, supported on carved corbels. The whole of the pewing is of new

deal, with cut-stall ends, sloping backs, book-boards, and doors. The pewing and all the roof timbers are stained. All the fittings in the chancel are of oak. The oak carving was executed by Mr. Adams. The church is lighted with gas by coronas suspended from the roofs. The windows in the aisles to the transepts (eight in number) are filled with stained glass, by Mr. Warrington, five of which are the gift of Mr. John Ellershaw, J.P., of Oakfield, Kirkstall, and the remaining three the gift of Mr. S. Clapham, of Burley. There is a memorial window in the south aisle by the same artist. In the north aisle, opposite the last-named window, is the Oastler memorial window, by Mr. Wailes; and in the south transept is the memorial window, by Mr. Prede, to the late Mr. William Beckett. The works have been executed by Messrs. Wright & Sons, joiners; executors of Thomas Hall & Co., joiners; Garlick & Son, plasterers; Naylor, plumber and gasfitter; Dickinson, painter; Messrs. Nelson, the hot-water apparatus. The whole has been from the designs of Messrs. Perkin & Backhouse, of Leeds, architects, and under the superintendence of Mr. Kaberry, clerk of works. The organ pipes have been decorated in the Mediæval style by Mr. Spence, of Leeds.

Weaste (near Eccles).—The foundation-stone of St. Luke's Church, at Weaste, has been laid on the site within the junction of the Eccles New-road and Weaste-lane. Sir Robert Gore Booth, bart., presented the site of the new church, together with half an acre of ground for the parsonage-house adjoining, and a money-gift of 2,000*l.* This sum has been supplemented by subscriptions from wealthy persons in the district, making a total of 11,050*l.*, which will fully meet the cost of the erection. The length of the building will be 128 ft., and its width about 58 feet. The sittings are to accommodate 500 persons, and will be principally free. The work is from designs by Mr. Scott; and Mr. William Huddleston, of Lincoln, is the contractor.

Newcastle-upon-Tyne.—The belfry of St. Nicholas's Church is said to be now more unsafe than ever, since it suffered from a recent storm. Mr. Dobson some time ago reported the steeple itself to be unsafe, and estimated the cost of the necessary alterations at 1,200*l.* or 1,400*l.* The town-council offered 500*l.* towards the restoration; but the rich parish of St. Nicholas repudiate all claims upon them for the cost of restoration, and the council threaten to try the question at law.

Chardstock (Dorset).—The restoration and partial rebuilding of the church of St. Andrew, in this parish, the foundation stone of which was laid in June, 1863, is progressing, and there is every probability that it will be ready for opening by the end of September. The nave and chancel have been rebuilt, and new north aisles added to both. New roofs have also been put to the south aisle and south transept, the walls of which have been allowed to remain. The church is to be reseated throughout, and tile floors laid in the nave as well as in the chancel. These, we hear, have been manufactured by Messrs. Minton & Co., expressly for this church, from the designs of Lord Alwyne Compton. The chancel is enriched with some serpentine and Devonshire marble shafts, which have been supplied by Mr. A. Blackler, of Dawlish. The architect is Mr. J. Mountford Allen, of Crewkerne.

DISSENTING CHURCH-BUILDING NEWS.

Henham (Essex).—A new Congregational Chapel has been opened here. Mr. Edward Sandford, of Bollington Hall, Ugley, bequeathed 1,500*l.* for the rebuilding and keeping in repair a new chapel at Henham, on the site of that in which he had been in the habit of worshipping. The trustees have consequently carried out his testamentary directions by pulling down the old chapel and erecting the new one. Irrespective of these circumstances, a new school-room, adjoining the chapel yard, has also been built, by voluntary contributions, and is nearly completed, and is intended to be used for the Sunday-school, for a lecture-room, and for adult classes. The chapel, which is calculated to seat about 700, is in the mixed Gothic and Italian styles, the dimensions being 53 ft. 10 in. by 37 ft., with a vestry 15 ft. 4 in. by 16 ft. The roof is open to the collar-beam, with plastering under the rafters. There is a gallery on either side and in front of the pulpit. In the front walls are three windows or bull's eyes, two of blue and one of crimson glass, and over the pulpit a semi-window of stained glass in three segments—ruby, purple, and amber. The other windows are of Millington's patent glass diamonded. There are three low pews on each side of the pulpit, and the rest of the area is in open benches, all of stained pitch pine. The aisles are paved with Minton's patent glazed tiles; and the pulpit is constructed of stained pitch pine. The schoolroom, in keeping with the chapel, is 53 ft. by 22 ft., the windows being of the same description of patent glass quarried. The builders' contract for chapel and school was 1,250*l.* The contractors for the works of both structures were Messrs. Thoday & Clayton, of Cambridge, builders; and the architect, Mr. Cowell, of London, a native of Henham.

Newbury.—The chief stone of the new church, at Cold Ash, Thatcham, has been laid. The materials are red and grey bricks, and white stone. The architect is Mr. R. Beesly, of London; the builder, Mr. Hollis, of Windsor. The cost will be about 1,700*l.*

Burslem.—A new Primitive Methodist Chapel has just been erected at Sneyd Green. The chapel, the foundation stone of which was laid on Martinmas Monday in last year, has been erected from the plans and designs, and under the superintendence, of Mr. R. Dain, of Burslem, architect. The building is in the Italian style, and is calculated to seat 120 adults and 230 children. There is an orchestra, and the walls are built high enough to admit of galleries being erected at a future time. The building is lighted with thirteen windows, having semicircular heads. The front is faced with white pressed brick, and between each tier of windows there are pilasters, with moulded stone bases and moulded carved caps, from which spring red brick arches over the windows and doorways. The upper part is finished with a stone cornice and pediment. The contract for the building, exclusive of boundary-walls and palisading, was taken by Mr. R. Hammersley, of Hanley, for 495*l.*, including the materials of the old chapel.

Middlesborough.—The foundation-stone of a new Presbyterian chapel has been laid here. The site of the intended edifice is at the corner of Newport-road and Hill-street. The plans comprise porch, chapel, school, vestry, minister's vestry, &c., and it will be built of white and coloured bricks. The building has been designed by Mr. Dearsley, of Middlesborough, as an adaptation of Early English to the requirements of the Presbyterian forms of worship. The interior of the chapel will be seated with open benches, and a gallery is included in the plans. The building will cost 2,100*l.*

Harrogate.—The foundation stone of a chapel about to be erected by the members of the United Methodist Free Church, Victoria Park, Harrogate, has been laid in the presence of a large concourse of persons. The chapel, which is in the Early English style, with tower and spire, will be erected with white stone (of which there are some quarries in Harrogate), and will accommodate 750 persons. The building will be decorated, both in the interior and exterior. The cost is estimated at 4,500*l.*, of which fully one-half has been already subscribed. Besides a chapel, the building will include class and band rooms, school-room for 300 children, &c.

PROVINCIAL NEWS.

Tunbridge.—Some steps are being taken in reference to the erection of a new town-hall here. A meeting, principally composed of the members of the Æsthetic and Choral Societies was held, at which Mr. W. Gorham presided, and Mr. W. Goddard produced a rough sketch of a plan of a town-hall, with baths, kitchen, institute, clubs, parochial vestry, and post-office, the estimated cost of which, including the buildings around, was 10,000*l.*; for the building itself, 3,050*l.* The plan was discussed by the meeting, and a formal resolution passed entertaining it, and expressing the opinion of the meeting that it was quite feasible. The site mentioned is that of the present Mechanics' Institute, down to the river.

Rochester.—At a meeting of the trustees of Watts's Charity the subject of providing public baths and washhouses, with a portion of the funds at the disposal of the trustees, was taken into consideration, and a committee appointed to take the necessary steps for carrying the proposal into effect.

Basingstoke (Hants).—The foundation-stone of the Basingstoke Corn Exchange has been laid. The site is at the corner of Wote-street and the lesser market, in close proximity to the old Corn Market and the Town-hall. The edifice will be in the Italian style, and will be faced with Bath stone and yellow bricks. The principal entrance will be from Wote-street, but a secondary one will be provided from the lesser market, and a future one is contemplated from Church-street. The building will consist of two floors—a basement and a ground-floor—the basement being intended to be used as corn and other stores. The Exchange will be approached by a side entrance, where carts and waggons can be drawn up not only for delivery of corn into the basement stores, but also to the ground-floor, by means of a door on a level with the top of a cart or waggon. On the basement, besides corn-stores, fire-engine houses will be provided, with exit to Wote-street; also a room for a heating-apparatus, if required; and in the front next to Wote-street an office for either telegraph or newspapers. On the ground-floor is the large Corn Exchange, which will be 90 ft. long, 57 ft. wide, and 33 ft. high to the skylight. It will be surrounded by iron columns, supporting an ornamental iron roof and skylight. A gallery will be constructed, which can be used for public speakers, or for musicians. The lighting has been provided for by means of side windows, and a large skylight over the body of the Exchange; and the ventilation has been arranged by means of forty-two swing windows, well above the heads of the assembly, all or any of which can be opened or closed at pleasure. The architects of the building are Messrs. Salter & Wyatt, of London; and the builders Messrs. H. & R. Holland & Hannen, of London.

Willenhall.—The foundation-stone of the new building for the Willenhall Literary Institution has been laid. The building will be erected from the designs of Mr. Veall, of Wolverhampton, architect, selected from a number submitted in competition. It is to be of a plain Gothic character, and will comprise on the ground-floor a library, reading-room, discussion-room, two class-rooms, and a residence for the attendant. The entrance to this portion of the building will be from Lichfield-street: towards Clemson-street will be an entrance-hall and staircase, leading to a lecture-hall on the first-floor, capable of accommodating about 400 persons. Attached to this hall are retiring-rooms, cloak-room, lavatory, and other conveniences. It is intended to execute the design in coloured bricks and stone. The principal staircase at the corner of Lichfield-street and Clemson-street will be carried up as a campanile, finished with a high-pitched slated roof. The tender of Mr. D. Evans, builder, Wolverhampton, is accepted at 761*l.*

Merthyr.—The Government having consented to advance 3,000*l.* towards a town-hall, upon condition of the remainder of the necessary sum being raised in Merthyr, there is now a probability of the building being shortly commenced, as the committee have experienced no difficulty in obtaining subscriptions to the requisite amount in the town.

Yeovil.—The town council have been considering a suggestion to purchase the whole of the property on the side of the Town-hall, and to sell the sites for the building of new shops thereon. The property can now be purchased, and it is estimated that it would cost 5,000*l.* For this the town would have a street running the whole length of the Market-house, and a number of building sites, which it is estimated might be sold at a sum equal to that paid by the corporation. A committee was appointed to inquire into, and report upon the matter.

Coventry.—The foundation-stone of the new Coventry and Warwickshire Hospital has been laid here. The building is in course of erection on the Stoney Stanton-road, and will be devoted to the purposes of a hospital for Coventry and Warwickshire, instead of the insufficient, incommodious, and comparatively insignificant premises in Little Park-street. Lord Leigh, Lord-Lieutenant of the County, as Provincial Grand Master of the Order of Freemasons, laid the stone with Masonic honours. The site of the new hospital is a piece of land about two acres in extent, which has been purchased of the trustees of Sir Thomas White's Charity. It is situate a short distance from the new Free Schools, within view of the new cotton factory, and in the neighbourhood of the new school of art. The new building has been designed by Messrs. Nevill & Son, of this city, architect. Its style is called Victorian Gothic. It is in the form of a cross, and will be two stories in height. There will be two ornamental towers, 63 ft. high,

in the fore part of the building. Over the entrance will be an oriel window. Including this large central window, there will be about eighty-five windows facing the road. Two large towers, similar to those in the centre, will rise at each end of the building. In the front will be a terrace, with three flights of steps, leading to the principal doors, and the ground will be inclosed by an ornamental palisading. The interior arrangements of the building are said to be planned according to the most modern and approved principles of hospital construction, care being taken to secure the best possible ventilation. The accommodation will include committee, consulting, and waiting rooms, a surgery, and other apartments on the ground-floor; students', matron's, surgeon's, and bath rooms; a library and a museum; an operating-room, 16 ft. by 18 ft., and 14 ft. high, and having an octagon roof; two rooms, one for male and the other for female patients, each 50 ft. by 25 ft., and 15 ft. in height, and for ten beds; rooms for special cases; two convalescent rooms, each 16 ft. by 13 ft.; and an accident ward, measuring 16 ft. by 14 ft. In addition to the above there will be baths, lavatories, kitchens, laundry, &c. The length of the edifice is about 260 ft., and its breadth 140 ft.; the fore wing projecting 64 ft. from the main structure. The total cost of the building will be something over 5,000*l*.

Sowerby-bridge (*Yorkshire*).—A new iron bridge, to be called the Victoria, built over the Ryburne, at Sowerby Bridge, has been opened. It is an iron girder bridge, 54 ft. span and 30 feet wide, erected at a cost of about 500*l*., and at the sole expense of Major Stansfield, of Field House, Sowerby.

Sunderland.—The contract for building Hutchinson's Almshouses has been let to Mr. Joseph Ridley, builder, for the sum of 2,465*l*. The works will be commenced immediately. The building will be a combination of the Gothic and Elizabethan styles of architecture, built of brick with stone dressings, and will contain accommodation for sixteen separate families, each family having three rooms. Each suite of apartments will be self-contained, and have separate conveniences. The front of the building will consist of three wings,—the right and left comprising the dwellings for the inmates, and the centre will consist solely of a large hall for the general use of the inmates, and will be so arranged that in case of an epidemic or fever breaking out in the house, it can be converted into an hospital; or it may be used as a public hall, for periodical meetings of the inmates at soirées, &c. The design was provided by Messrs. T. Mowbray & Son, of Sunderland. The site of the building is near the park. The ground has already been laid out.

FROM SCOTLAND.

Edinburgh.—St. Peter's Episcopal chapel, in Roxburgh-place, is being enlarged under a contract with Mr. Raffin, the original contractor for the edifice. A square tower and a spire will be erected at the north-west corner, rising to a height of 183 ft, the spire rising 74 ft. above the tower, and its surface enriched with ornamental bands alternating with rows of cinquefoil panels. The roof and ends of the former building will be incorporated in the new one, as was provided for when the original plans were modified; but the side walls will be removed, and in their stead a series of arches, supported on pillars of polished Peterhead granite with carved capitals will be inserted. Beyond these, on each side, will be an aisle divided into five bays by the pillars, each bay having a pointed-arched two-light window. A cloister, 9 ft. wide, connecting the aisles, will run across the west end of the church; and, beneath the south end of this cloister, the ground being low, a lady's waiting-room will be formed. The flat roof of the cloister will be supported on a series of pointed-arched open beams. From near the centre of the cloister the baptistery will extend. This latter is to be an octagonal structure, with a groined roof, and will be 28 ft. in diameter. The extreme external width of the church, exclusive of the tower, will be 65 ft., and the length, including the baptistery, about 160 ft. The chancel will remain as at present, and in front of it a space for the choir will be preserved, on one side of which the organ will be situate, and on the other the vestry, the latter being separated from the north aisle by an ornamental stone screen. The floors of the passages will be laid with tesselated tiles. The roof will be an open wood one, stained and varnished, and divided by open beams. It is intended to fill the windows of the building with painted glass, and several have already been subscribed for with a view to their being devoted to memorial subjects. Provision has also been made for a chime of bells. A large space of ground round the site of the building has been acquired by the congregation, which it is intended to lay out as a shrubbery, and enclose by a stone wall surmounted by an iron railing. The cost of the completed building will be about 9,000*l*. The architect is Mr. Slater, of London.——The town council have referred to the Lord Provost's committee a report by Mr. Cousins, the city architect, as to the widening of the thoroughfare between the South Bridge and George the Fourth's Bridge, as a principal entrance to the Government Industrial Museum.

Selkirk.—The ensuing season is likely to be a brisk one here for the building trade, as there are a great number of buildings in contemplation. Premises in the High-street, lately occupied by a plumber, have been purchased by the Hon. William Napier, of Broadmeadows, as a site for a commodious hall for the benefit of the inhabitants of the burgh. A new parish school is to be erected in a field above the Free Church, Tower-street. Alterations will be made on the Burgh School, which will cost 200*l*. There are also to be improvements on the county gaol, which will cost about 1,300*l*. On Millhaugh, a manufacturer from Galashiels is about to build a new factory; and a factory is about to be erected near the railway station.

Broughty Ferry (*near Dundee*).—The members of Dr. Murray Mitchell's congregation are erecting a new free church. The building is being rapidly proceeded with. The architect is Mr. Andrew Heiton, of Perth. The style is Decorated. The church is in the form of nave and transepts, and is 85 ft. long over walls from east to west, 41 ft. broad over walls at nave, and 66 ft. at the transepts. There are two principal entrances, one from the north and the other from the east. The roof will be open as far as the tier, which will be 37 ft. from the floor of the church, and the ridge 14 ft. above this. The entrance which will be most used is that facing the Monifieth road, above which it is proposed, when circumstances allow of its erection, to place a spire upwards of 150 ft. in height. The church will be heated with hot-water pipes. There will be seats for 591 persons. The walls externally are of uncoursed rouble of Carmyllie stones, with Fifeshire dressings. The contractors for the mason work are Messrs. Keith, Connel, & Co., and for the joiner work, Messrs. David Kidd & Son. The other works are not yet estimated. The clerk of works is Mr. James Dickie.——An Independent chapel has been opened here. The edifice is situate between Brook-street and the railway, a little to the east of the Free Church (Rev. Mr. Lyon's). The main entrance is in the south end of the building, which is the most ornamental part of the structure. In the interior the walls and roof are all lined with wood, varnished; while the windows at the north end, above the pulpit—or rather platform—are filled with stained glass. There are gasiliers hung from the roof. The organ-loft, in which the organ built by Messrs. Conacher & Co. is placed, is at the south end, above the vestibule. The church is seated for 320.

Perth.—The statue of the Prince Consort has been placed upon its pedestal at the foot of the North Inch without having sustained any injury. The magistrates recommend that the 30th inst. be observed by the citizens as a general holiday. It is understood that, in accordance with the wishes of her Majesty, the ceremony of the inauguration of the statue will be very short, and conducted with the greatest possible quietness.

LAW OF CONTRACTS.

Drake v. The Torquay Hotel Company.—From Mr Karslake's opening statement (Bristol Assizes), it appeared that a builder, living at Norwood, had sent in a tender for the erection of a hotel at Torquay. His tender was accepted, and he commenced the work, being present at laying the foundation stone. By direction of the directors, and of Mr. Clifton, their architect, he carried on the work as fast as he could, notwithstanding that he alone had signed the contract. Subsequently, for some reason which had not been explained, some one else was appointed by the directors to finish the building, and the plaintiff received a notice from them that unless he ceased the work and left the premises he would be forcibly removed. He did leave the premises, and he now sued to recover damages for the breach of contract, and also payment for the work done and the plant remaining. In answer to the latter claim, the defendants had paid into court the sum of 380*l*., but the plaintiff contended that he was entitled to considerably more than that amount. The case was referred to arbitration.

Books Received.

VARIORUM.

Two pamphlets have been published by Emily Faithfull, for the General Committee of the Social Science Association, on corruption and expenditure at elections; one by the Rev. F. D. Maurice, titled "Corruption at Elections: with Speeches of John Stuart Mill and Edward Chadwick, C.B., and Report of Standing Committee of Jurisprudence and Amendment of the Law;" and the other by Mr. W. D. Christie, late the Brazilian Minister, and which is titled "Suggestions for an Organization for Restraint of Corruption and Expenditure at Elections." Funds are still required for the furtherance of the useful object which the Committee of the Association have thus in view.——Mr. Stanford has published a map, showing the metropolitan railways and miscellaneous improvements sanctioned by Parliament in 1864; the first twenty-seven in number, the second eleven. Many of our readers will find it useful. ——"Tweedie's Handy-Book for Inventors and Patentees," instructs intending patentees how to proceed, and is exactly what it purports to be. ——The exploits of our soldiers, "*ubique per mare et terram*,"—are agreeably treated of by Mr. W. H. Davenport Adams, in "Famous Regiments of the British Army,"—published by Messrs. Hogg. It includes, too, some biographical sketches of eminent English generals, and is altogether a nice little book.

Miscellanea.

The Lewis Statue.—The bronze statue, from the cast of Baron Marochetti, to the memory of the late Sir G. C. Lewis, has arrived in Hereford. The 3rd of September is fixed for its inauguration. Lord Palmerston has promised to attend to deliver the inaugural address.

The Iron Trade.—In consequence of the demand for British iron in the United States, a considerable increase has been observable in the exports of iron of various kinds during the last two years. The value of the exports shows an immense increase, having been 6,996,510*l*. this year, against 5,916,867*l*. in 1863, and 5,071,354*l*. in 1862.

Cathedral in Tasmania.—This is intended to be the work of many years. Mr. Bodley, architect, has proposed a plan which, to carry out completely, may cost 20,000*l*. It is proposed to adopt his recommendation of first erecting the nave, at a little more than a third of the whole cost. As soon as 5,000*l*. can be raised as the joint contribution of home and colonial liberality, the structure will be commenced.

A Convalescent Hospital.—Mr. Banting, of anti-corpulence notoriety, has issued an appeal to the public for the erection of a hospital, to be named the "Middlesex County Convalescent Hospital." As a thank-offering for himself, and perhaps an appropriate expenditure of the profits of his 50,000 pamphlets sold, Mr. Banting heads the list with the very handsome sum of 500*l*. We hope it is not intended to erect the projected convalescent hospital in town.

Hotel Dieu, Paris.—The much-required removal of the great Hospital in front of Notre Dame now seems imminent. M. Haussman, Prefect of the Seine, has sent to the Mairie of the 4th arrondissement a plan of the new Hôtel-Dieu, which is to remain there for fifteen days, in order to give those who may feel injured by the change an opportunity to demand compensation. According to this plan the open space in front of the Cathedral of Notre Dame is to be enlarged.

Public Safety on French Railways.—At the suggestion of the government, the French railway directors are taking into consideration how best to prevent accident to railway trains, and annoyances, or worse, to the travellers by them. Each carriage is to have a window with curtains, on each side, and round every carriage is to run a sort of gallery with balustrades, which the guards can pass, and on to which any passenger can get if assailed or alarmed in his carriage. Thus France is taking the precedence of England, and is adopting almost precisely those two measures (urged in the *Builder*) which have been recommended by our own Board of Trade to English railway directors.

Sanitary Condition of Ballarat.—We hear sad accounts of the want of sanitary measures in Ballarat, and the consequent evil effects. This inland town has 25,000 inhabitants, and not the idea of drainage or sewerage. The *Ballarat Star*, their principal paper, never tires of writing about this important matter, and constantly points out the frightful rate of mortality prevailing there; but it is all of no use: the people will not understand the vital importance of sewerage and fresh air. They wait for the occurrence of some terrible epidemic to be convinced.

Bishop Stortford.—The erection of an iron bridge over the Stort, and a new approach to the railway station, are long-needed improvements now in a fair way of being carried out. At a public meeting, the plans of the proposed bridge were exhibited, and Mr. Perry, the architect of the bridge, stated that the width would be 18 feet. Mr. J. D. Taylor said the cost of the bridge and land would be from 1,500*l.* to 2,000*l.*, and Mr. Perry said that the lowest contract for bridge and approaches was 698*l.*, which would complete both. It was agreed that a subscription be opened forthwith for defraying the expenses of the bridge and its approaches. A committee was appointed.

Fearful Explosion at Vauxhall Foundry, Liverpool.—Two men have been killed and fourteen wounded, by an explosion, at the extensive works in the Vauxhall-road, Liverpool, known as the Vauxhall Foundry. It appears that a portion of the south wing of the foundry is used as a machine-shop, and that for the purpose of driving the lathes, &c., there is a powerful engine and a boiler of ninety horse power. In order that there may be no delay in generating steam when the men go to work in the morning, the boiler-fires are "banked" over-night, and a moderate pressure of steam always ready the first thing in the morning. On the occasion alluded to, about ten minutes or a quarter past six a.m. the boiler exploded, completely demolishing the building in which it was situate.

The Worcester Association for Building Dwellings.—This society has held its tenth annual meeting. The report of the governors states that "this their tenth annual report is of a more satisfactory character than any preceding one, insomuch as the receipts for the past year are somewhat increased and the expenditure considerably diminished, leaving a balance of 161*l.* 10*s.* 2*d.*" A dividend of 2 per cent. has been declared. Sir Charles Hastings, the chairman, stated that, looking at the work as one of philanthropy, the governors had every reason to be satisfied. The annual death-rate in the locality of the model lodging-houses before the society was formed was about twenty-four in a thousand, but now the annual mortality was not more than eleven in a thousand.

The Birmingham General Hospital.—An able paper on the sanitary and general condition of this hospital has appeared in the *Medical Times and Gazette*. The author is Dr. Richardson, and the paper forms one of a series on the medical history of England. He is of opinion that it is impossible to improve the Birmingham Hospital so as to obviate the necessity of rebuilding. "The hospital," he remarks, "is one of sixteen or seventeen others, in different parts of the country, built about the middle of the second half of last century, on what may be called an experimental plan, drawn out at a time when the great laws respecting physiology, the spread and communication of disease, and the best methods of ventilation were in their infancy and were scarcely appreciated. The foundation or design of these hospitals is consequently all false when compared with the knowledge of what is required, and which we at this present possess. The wards are built in such way that they cannot be lighted and ventilated from every point of the compass; the windows are too small; the doors and furnaces are incorrectly placed in relation to each other; the staircases communicate with the basement; the wards communicate; the sizes of the wards differ; the accommodation of the nurses and officers is forgotten; the water-closets and lavatories open into the wards, and the ceilings of all the apartments are too low. . . The presence of erysipelas and hospital gangrene, or pyæmia, as in this hospital, is a sure and certain indication of defective and, in most cases, incurable or irremediable construction." The erection of an entirely new hospital, on the pavilion principle, is the step required.

The Hotel Movement.—The well-known Bell Hotel, at Gloucester, the birth-place of George Whitfield, the religious revivalist of the last century, and of Henry Philpotts, the present Bishop of Exeter, has passed into the possession of the Gloucester Bell Hotel Company (Limited).

The Metal, Magnesium.—In the form of wire this metalloid may now be purchased, according to the *Telegraphic Journal*, at 3*d.* per foot at all the principal metallurgists, opticians, and photographic material dealers. If the end of a piece of the wire be held in the flame of gas or candle, it at once takes fire, and burns gently with a dazzling white light, by which a photograph may be taken with a perfection, it is said, equal to that of sunshine.

Accident.—The roof of a building in Lower Rushall-street, Walsall, used by Messrs. England & Son, as a spectacle manufactory, has fallen, bringing with it in its descent all the coping stones, spouting, and a portion of the walls of the buildings. Just about a second before the roof fell, eight girls, who were waiting to be admitted, were standing where several of the large coping stones were afterwards thrown. Had the factory door been a moment later in being opened, some, if not all, would have been seriously injured, if not killed.

Portraits of Confederate Generals.—Such as are interested in the fortunes of the South, or admire pluck and bravery in any quarter, may like to know that at Mr. Bowden's, 314, Oxford-street, they will find portraits, by Mr. John Robertson, an English artist, of Lee, Stonewall Jackson, Beauregard, and others of the Confederate generals. Without any great claim as works of art, they have the merit of being likenesses of men who have interested all Europe in their fortunes. We are not of those who think the South all right and the North all wrong, but for the courage and determination of the former we have an admiration not to be exceeded.

Reform of Dress.—A letter from Dresden states that a general meeting of the European Academy of Fashion (?) has just been held in that city. Nearly 200 members were present. The principal subject discussed was a project of erecting an edifice for a superior school to teach the arts relating to dress. The idea is that the establishment shall comprise a museum of costumes of all epochs, and a benefit fund for the relief of journeymen tailors unable to work. M. Müller, the director of the academy, offered to give the ground for the building. His offer was accepted, and the meeting voted the advance of 15,000 thalers (60,000 francs) to commence the works.

Fall of the Borough Saw Mills, London.—Considerable alarm was caused in the narrow thoroughfare known as Mermaid-court, High-street, Borough, owing to a report being heard similar to a clap of thunder. In March last the interior of the mills and the machinery were sold by public auction, and the mills were intended to be converted into large warehouses. The outer walls and roof belonged to Mr. Humble, of Hibernia-wharf, London Bridge. Owing to the removal of the interior fittings and machinery, the walls have for some time past been considered in a dangerous state. The roof on part of the old mill fell in and forced out the outer walls which fell into a court, burying, but not fatally injuring, a child.

Nottingham Architectural Association.—The members of this Association, with the mayor of Nottingham, and other gentlemen interested in architectural and archæological science, have just held their annual excursion meeting. The places selected for this year's visit were Bolsover Castle and Clumber. The party travelled in the saloon carriages of the Midland Railway Company to Mansfield, where breakfast had been prepared. Carriages left this place at 9·30, and after a drive through the border scenery of Derby and Nottingham, arrived at Bolsover Castle at eleven, and were cordially welcomed by the Rev. John Hamilton Gray and family, whose collection of antiquities and works of art were laid out for the inspection of the visitors. The party afterwards proceeded by way of Langwith and Cuckney, to Clumber, at which latter place the members and friends were received by Mr. Henry Heming, the agent to the Duke of Newcastle. The mansion was inspected; and after visiting the boat-house and other external features, the party returned to Mansfield and Nottingham.

Indian Progress.—The *Hurkaru* says:—"We cannot too much impress on agricultural engineers in England that at no distant period their machinery will be required in this country to a very great extent."——The Madras *Athenæum* has been given to understand that the introduction of one uniform standard of weights and measures throughout India is at present under consideration of the Government, and will soon be brought into operation.

Bi-Concave Tile.—Whitworth's registered bi-concave tile, for covering, roofs, &c., is said to possess the following advantages:—Each tile has two points of bearing upon the lath, also two knobs, and lies flatter on the roof than the old pantile. There are also two water-courses instead of one, as in the pantile, and the water during heavy rains will run more steadily into the eave-spouting, thereby preventing overflow, and keeping the walls dry.

The Emigration of Hand-loom Weavers from Scotland.—In Glasgow there is a kindly and charitable movement going forward in sending abroad the hand-loom weavers, who in these days are as much out of place in the busy city of Glasgow as the old-fashioned bow and arrow would be at the Horse Guards. In this great mercantile and manufacturing centre, which has "flourished" far more than Bailie Nichol Jarvie, in days gone by, anticipated, a society has been formed to promote the emigration of the hand-loom weavers and their families. Lately, a party by this means were enabled to proceed to Quebec, by the screw ship *St. Andrew*: it consisted of eighteen families, including sixty-eight adults. This makes the number whom the committee have sent out this season to Canada 103 families, including 367 adults; and in all 557 souls.

Charing-cross Hotel Company.—The second ordinary meeting of the shareholders of this company has been held at the offices of the South-Eastern Railway Company. The report stated that the directors had pleasure in drawing attention to the satisfactory progress made in the construction of the hotel. The directors, having reason to anticipate a larger demand for sleeping accommodation for visitors than was previously expected, have deemed it advisable to enlarge the building by adding another floor, consisting of about fifty extra bedrooms. The directors had to report that they had entered into a contract with Messrs. Lucas, Brothers, for the construction of the building, for the sum of 121,542*l.* 17*s.* 4*d.*, from which is to be deducted 10,000*l.*, repaid by the railway company for their booking-offices at the Charing-cross terminus. The directors were about to exercise the borrowing powers conferred by the articles of association, to the extent of 50,000*l.*, and were prepared to receive loans, in amounts of not less than 100*l.* each, in exchange for debentures for three or five years, at a rate of interest not exceeding 5*l.* per cent. per annum. The report of Mr. Barry, the architect, stated that, since the last report, rapid and satisfactory progress had been made with the company's works, which were being carried on with great ability by the contractors, Messrs. Lucas, Brothers. The report was adopted.

Paper Material.—It is stated that the trade in esparto grass, through its introduction for the manufacture of paper, has become so extensive that, though the accommodation for the warehousing of cargoes at the Tyne Docks is so ample, still more is required.——An innovation, slight in itself, but which in a few years may revolutionise the outward appearance of current literature, has very recently, says the *London Review*, been made in the binding of new books. Cloth has so increased in price, owing to the American war, that an enterprising firm has conceived the idea of forming a paper substance having all the strength and flexibility of cloth, to take its place on the outside of books. Some specimens of this prepared paper are now before us. This substance appears to receive gilt impressions with the distinctness of morocco, and, as it can be washed with soap and water when dirty, it may be surmised that, hereafter, the phrase "musty literature" will fall into disuse. It is said that its cost will be something like one-half of the present price of embossed cloth. Another paper states that Tennyson's new volume has made its appearance in this style of binding; but we suspect that this must be a mistake. Is not the "paper substance" in question some form of artificial vellum, such as paper is so readily converted into by dipping it into acidulated water?

Foul Air from the Sewers.—A correspondent, "N. Rigby," writes,—A few days ago, the inhabitants of Moorgate-street, City, and its neighbourhood, were seriously alarmed by an escape of gas-like effluvium into the houses; so much so, that they were afraid to take anything in the shape of a light about the premises; and the effect was most sickening. Upon examination, the only conclusion I could arrive at was that some gas-like chemical had been thrown down the sewers, from some manufactory or gas-works, proving beyond a doubt the want of a proper and efficient trapping, to prevent the escape of foulness from the sewers nto the dwellings generally.

Fires.—The extreme dryness of the season has been strikingly marked by the spread of vast fires in the country, destroying trees, crops, and other property. The Woolmer Forest has been thus devastated for seven miles in length by about three miles in breadth, and it required the exertions of 1,000 men, chiefly military, for three days and nights, to dig several miles of trenches merely to check the fire, which continued for a week to destroy an immense amount of property, chiefly belonging to the Government. A similar conflagration has spread through twelve miles of forest country in France, between Mede and Hyeres; and here, too, the military were called out to extinguish the fire, or rather to prevent its extension. The way in which such fires occur is shown by others, such as the destruction of five acres of standing barley near Newbury, which was fired by a spark from a locomotive. Other fires of this kind have also occurred.

Restoration of Worcester Cathedral.—Mr. Scott has just made a report to the dean and chapter of Worcester on the final work required for the completion of the restoration of the choir of this cathedral. The report is very lengthy, and is accompanied by plans which have been ordered to be exhibited in the cathedral. Mr. Scott divides the consideration of the subject into the following heads:—1. Whether it will be desirable so far to infringe upon the present arrangement as to open out the choir to the nave by the substitution of an open for the present solid screen. 2. Whether the organ should be moved, and, if so, where it should be placed. 3. Whether it will be proper to remove the canopy work of Queen Mary's time, and, if so, whether new canopies should be provided of a character according with the fourteenth century. 4. Whether the present altar-screen should be replaced by a reredos of a suitable character. The probable cost, including new reredos, grilles for side arches, the alterations in the organ, warming and lighting, and decoration of the Lady Chapel, is estimated at between 12,000*l.* and 13,000*l.* The tender of Mr. Wood, builder, Worcester, for the restoration of the tower and north side of the cathedral, has been accepted, but Mr. Wood has since withdrawn from it. The decision on the plans for warming the cathedral is postponed for the present.

Opening of the Fylde Waterworks.—The towns of the Fylde in Lancashire, including Fleetwood, Garstang, and Lytham, are now being supplied with water from new works which have just been opened though not yet completed. The Fylde Waterworks Company have a capital of 60,000*l.* The water is got from Grizedale fell, and is collected in a reservoir at Nickey Nook, a ravine which has been dammed up for the purpose. This dam or embankment is nearly completed. It is upwards of 70 ft. high, 370 ft. wide at the base, and 12 ft. wide at the top. It encloses a reservoir of fifteen statute acres surface area, and capable of storing 100 millions of gallons of water, which passes by 12-inch iron pipes to Weeton, where there is a circular service reservoir 408 ft. in diameter at the base and 468 at the top, with an embankment 70 ft. in diameter at the base and 12 ft. at the top. It is formed on the summit of a hill, the excavation being used in the circular embankment, and will hold about 15 million gallons. Mr. Foster, C.E., of Manchester, is the company's engineer; Mr. McGuire, C.E., of Accrington, the contractor for the formation of the Grizedale reservoir; Messrs. Cunliffe & Son, of Blackburn, the contractors for the Weeton reservoir; Mr. H. Ashcroft, of Preston, the contractor for the laying of the pipes from Grizedale to Weeton, and from Weeton to Lytham and Kirkham; and Mr. Bickerstaffe, of Preston, for laying the pipes from Weeton to Blackpool and Lytham.

Destruction of a new Building by Lightning.—At Partrick, near Glasgow, the buildings for the Western Cooking Depôt have been completely destroyed by a thunderstorm. The building was nearly finished, and was about 80 ft. long and 40 ft. broad. It was a brick erection, with a frontage of stone, and the roof composed of iron beams, the empty space being filled with wood. Immediately after a bright, vivid glare of lightning, the whole of the roofing and the brick walls fell, a portion of them on a wooden tenement used as a mission station in connexion with the Free Church, damaging it considerably. Only the stone frontage of the depôt was left standing.

Chimes for Boston Church.—A representative of the firm of Van Aerschodt Ainé & Co., bell-founders, from Louvain, Belgium, visited Boston last week, in order to inspect the present bells of the parish church and the capabilities of the tower for receiving a further number, sufficient to constitute a satisfactory and complete change of carillons, after the model of those in Antwerp, Liege, Bruges, and other foreign cathedrals. As the arrangements are at present only in *limine*, it is impossible to state what the authorities may ultimately decide; but the following may be taken as a general idea of the proposal, so far as the results of last week's interview proceeded, viz.:—To leave the present peal intact, adding thirty-nine smaller bells, making four complete gamuts; the hour of the clock to strike on the fifth or seventh bell of the present peal, and to substitute for the present quarters the changes of the carillons. The probable cost of the whole alteration is estimated at 600*l.*, which the present mayor, who is the main mover in the matter, is about to make efforts to collect.

Accidents Compensation Act Amendment.—One of the Acts passed in the last session of Parliament was that introduced by Mr. Ferrand, M.P., for extending the provisions of Lord Campbell's Act to the families of working people killed by accident. The 9th and 10th Victoria (Lord Campbell's Act) provided that, "every such action should be brought in the name of the executor or administrator of the person deceased;" but as the working classes rarely have occasion to appoint executors or administrators, the consequence has been, that however glaring the wrongful act, neglect, or default, which has caused the deaths of working people by accident, their families have been unable to obtain any redress. The present Act directs that "where there shall be no executor or administrator of the person deceased, then such action may be brought by and in the name or names of all or any of the persons for whose benefit such action would have been if it had been brought by and in the name of such executor or administrator." This general measure was introduced into Parliament more particularly to check the fearful destruction of human life by boiler explosions, which are chiefly caused by over-pressure and gross neglect.

TENDERS.

For enlargement of the workhouse at Kingswinford, for the Board of Guardians of the Poor. Mr. Gething, architect:—

Ife (builder)	£625	0	0
Jeakes & Co. (engineers)	518	0	0

For the finishing of eight cottages at Stratford, Essex, for Mr. J. Drew. Mr. Fred. Chadwick, architect:—

Rivett	£1,673	0	0
Brown	1,400	0	0
Hill & Gosshawk	1,286	0	0
Thomas & Jenkins	1,290	10	0
Hall	1,116	0	0

For the erection of the church and boundary walls of St. Michael and All Angels, Bromley, Middlesex. Mr. Jno. W. Monis, architect. Quantities supplied:—

Jeffrey	£8,365	0	0
Hack & Son	8,254	0	0
Sheffield	7,780	0	0
Kilby	7,240	0	0
Dove, Brothers	7,195	0	0
Myers	7,167	0	0
Watts (accepted)	6,976	0	0

For three houses, Whitehall-road, Woodford. Mr. Gliddon, architect:—

Roome, Brothers	£987	0	0
Skinner	987	0	0
Hewlet	980	0	0

For additions to house at Upton, near Bexley, Kent. Mr. P. Wells, architect:—

Wells	£1,516	0	0
Jackson & Shaw	1,505	0	0
Simms & Martin	1,500	0	0
Brown & Robinson	1,495	0	0
Macers	1,480	0	0
Dove, Brothers	1,425	0	0
Rhodes & Roberts	1,415	0	0

For the erection of a public-house, Bow-road, for the Bow Brewery Company, deducting value of old materials. Mr. Jno. W. Monis, architect. Quantities supplied:—

Hill & Keddall	£1,822	0	0
Rivett	1,793	0	0
Kilby	1,747	0	0
Hedges	1,688	0	0
Hack & Son	1,636	0	0
Salt	1,528	0	0
Watts	1,438	0	0
Atherton	1,400	0	0
Sheffield (accepted)	1,397	0	0

For new shop-front to a house at Kennington. Mr. S. Dyball, architect:—

Warne	£330	0	0
Perry	303	0	0
Terry	290	0	0
Worm	288	0	0
Osborne	258	0	0

For alterations and additions at No. 43, Edgware-road, for Mr. Brooks. Mr. Isaac Bird, architect. Quantities supplied:—

Carr	£1,357	0	0
Newman & Mann	1,249	0	0
Brown	1,230	0	0
Williams	1,220	0	0
Hebb & Son (accepted)	1,217	0	0

For buildings in Farringdon-road, for Mr. W. Dickes. Mr. H. Jarvis, architect:—

	Warehouses.			Back Building.		
Colls & Son	£3,945	0	0	£2,345	0	0
Gammon	3,594	0	0	2,243	0	0
Piper & Wheeler	3,475	0	0	2,320	0	0
Thompson	3,500	0	0	2,270	0	0
Higgs	3,483	0	0	2,180	0	0
Hack & Son	3,467	0	0	2,119	0	0
Sharpington & Cole	3,345	0	0	2,177	0	0
Myers & Son	3,353	0	0	2,144	0	0
Henshaw	3,280	0	0	2,068	0	0

For three new shops and houses in Great Portland-street and Great Castle-street, deducting value of old materials:—

Hollands & Hannen	£5,137	0	0
Saunders	4,660	0	0
Tracey & Co.	4,529	0	0
I'Anson	4,490	0	0

Messrs. I'Anson's tender being accepted, a second tender was opened, whereby Messrs. Vokin's premises, Nos. 14 and 16, Great Portland-street, under the superintendence of Messrs. George & Vaughan, architects, amounted to 2,823*l.*; and Miss Creswick's, No. 4, Great Castle-street, under Messrs. F. W. Bushill & Finlayson, 1,753*l.*

For new Wesleyan Chapel in the Bow-road. Mr. W. W. Pocock, architect:—

Thompson	£5,850	0	0
Dove, Brothers	5,685	0	0
Stevenson	5,684	0	0

TO BUILDERS.—MR. T. J. HILL has received instructions to make arrangements with one or more respectable Builders to FINISH an ESTATE in Surrey, about 14 miles from London. There are several parts of it in different stages of completion, some covered in, and others ready; and to any one who can finish them out at once great pecuniary advantages will be offered.—Apply at the Offices, 70, Old-street, City-road.

TO ARCHITECTS, SURVEYORS, and CONTRACTORS' CLERKS of WORKS.—J. W. W. 9, Albert-street, Pentonville, Newington Butts, will continue to give PRACTICAL LESSONS in LEVELLING through the month of SEPTEMBER.—For further particulars see "Builder," Nos. 1112, 1113, and 1116.—References to Pupils if required. Complete in Eight Lessons.

PHOTOGRAPHY.
DOLAMORE & BULLOCK,
ARCHITECTURAL AND ENGINEERING PHOTOGRAPHERS,
30, REGENT STREET, WATERLOO PLACE, S.W.

TRACINGS COPIED.—Architects and Others who make drawings on tracing paper, may now procure COPIES of such DRAWINGS, of the same size as the originals, whatever their dimensions may be. These copies, being made by a photographic process, are in all respects facsimiles of the original drawings.—For terms, and other particulars, apply to WILLIAM WILLIS, 3, Bath row, Birmingham. N.B. No injury accrues to the tracings from being subjected to this process of copying. Intransmission they should be protected by a roller, not folded. Single copies are returned by next post after receipt of tracing; a larger number the day following.

ARCHITECTURAL PARTNERSHIP.—An Architect, who has long practised in an important town of Yorkshire, in Ecclesiastical and General Architecture, wishes to enter into an ARRANGEMENT with a Gentleman desirous of acquiring business. Premium required very moderate.—Address, with references, and full particulars as to qualifications, M. I. B. A. care of Mr. Lock, 220, Gray's-inn-road, W.C.

A FEW competent STONE CARVERS WANTED. Apply to JAMES BIRCHENOUGH, 14, New York street, Ardwick, Manchester.

BOROUGH of SALFORD, Broughton District. – OFFICE of SURVEYOR.—WANTED, a Person duly qualified to act as SURVEYOR of the SEWERING, DRAWING, PAVING, and other WORKS to be executed within the Broughton District, and fully competent to prepare plans, sections, specifications, and estimates. He will be required to devote the whole of his time to the duties of the office. Salary, 180l per annum. Applications, with testimonials endorsed "Application for Office of Surveyor," to be sent to me not later than the 31st instant.—By order, GEO. BRETT, Town Clerk.
Town Hall, Salford, 16th August, 1864.

RAILWAY and ESTATE SURVEYING and LEVELLING.
In any Part of the Country.
By C. C. No. 17, Hill-street, S.W.

BOROUGH of PLYMOUTH.—To CIVIL ENGINEERS, SURVEYORS, &c.—The Council being about to appoint a SURVEYOR to assist in superintending the general management of the Corporation Waterworks, CANDIDATES for the office are invited to send to the Town Clerk's Office, Guildhall, Plymouth, on or before THURSDAY, the 8th day of SEPTEMBER next, applications in writing specifying their names, ages, and addresses, with particulars of their present and previous occupations, accompanied by such testimonials as to character and competency for the office as they desire to submit to the council. The salary will be 200l per annum, and the person elected will be required to devote his whole time to the office.—Application forms and particulars may be obtained at the Town Clerk, Guildhall, Plymouth.
WHITEFORD, Town Clerk.
Town Clerk's Office, Plymouth, August 20, 1864.

DECORATIVE ARTIST WANTED, who can paint Arabesque ornament and flowers in a superior style, and who is competent also to design and draw ornament full size. A liberal salary given.—Apply, by letter only, addressed to Mr. C. No 14, Wigmore street, W.

JOINERS WANTED, at Messrs. ROGERS & BOOTH'S, Clarence-square, Gosport.

NOTICE to SURVEYORS and OTHERS.
The Town Council and Local Board of Health for the Borough of Weymouth and Melcombe Regis are desirous of receiving applications from parties duly qualified to fill the OFFICE of SURVEYOR. The person to be appointed must possess a good practical knowledge of building and surveying, as he will be occasionally required to furnish estimates of builders' work generally, and to make plain drawings of the same; and also to take levels of and survey the roads, sewers, and drains within the district; he must also write a good plain hand, and possess a general knowledge of accounts. Salary, 100l per annum.—Applications, enclosing testimonials of competency, to be sent to the Town Clerk's Office, on or before the 13th day of SEPTEMBER next. Canvassing the members of the Town Council or Local Board of Health either verbally or by letter strictly forbidden, and the doing so to be considered a disqualification for the Office. Further particulars may be obtained on application at the Town Clerk's Office, New-street, Melcombe Regis.
FREDK. CHAS. STEGGALL, Town Clerk.
Weymouth, 12th August, 1864.

PAINTERS' FOREMAN.—WANTED, an experienced FOREMAN, competent to take charge of the Painters' Department.—Apply by letter, stating age and previous employment, to WILLIAM CURRIE & CO. Gray's-inn-road, W.C.

ROCHESTER HIGHWAY DISTRICT.—The Highway Board for the above District will, at their meeting, to be held on the 13th day of SEPTEMBER next at the Bull Hotel, Rochester, at TWELVE o'clock, be prepared to receive APPLICATIONS from Candidates for the Offices of DISTRICT SURVEYOR and ASSISTANT SURVEYOR to this Board. A practical knowledge of the management and repair of highways will be requisite. The yearly salary, including travelling and all other expenses, will be, for the Surveyor, 150l; and for the Assistant Surveyor, 75l. They will have to devote their whole time to the performance of their duties, and must reside within some central position of the district, to be approved of by the Board. Candidates must state their age, and forward testimonials as to character and ability to Mr. CHARLES MARTIN, the Clerk to the Board, at his Office, in Strood, on or before the 12th day of SEPTEMBER next, and of whom further particulars may be obtained. Applications to be marked "District Surveyorship," or "Assistant Surveyorship." Applicants for the above offices must be in attendance at the Vine Inn, in the day above mentioned for the meeting of the Board, and the persons elected will be required to give satisfactory security for the due performance of the duties.—By order of the Board,
CHARLES MARTIN, Clerk.
Strood, August, 1864.

SURVEYOR for the Town of ROCHDALE.
WANTED, a person duly qualified to act as LOCAL SURVEYOR of the Paving, Drainage, and other works authorised under the provisions of the Rochdale Improvement Act, 1851, and the several Acts incorporated therewith. He must be thoroughly competent to take levels, make plans and designs, and have knowledge and had experience in the valuation of property. Salary, 200l per annum.—Applications, with testimonials, to be sent to my Office, Yorkshire-street, Rochdale, on or before the 1st day of SEPTEMBER next.—By order,
ZACH. MELLOR, Town Clerk.
Rochdale, 19th August, 1864.

TYNEMOUTH LOCAL BOARD of HEALTH.—WANTED, for about three months, an INSPECTOR, to superintend the construction of sewerage works at Cullercoats. One accustomed to level and prepare drawings preferred. Salary 1l. 10s. per week.—Apply to
THOMAS ROBSON, Borough Surveyor.
Borough of Tynemouth, August 17, 1864.

TO ENGINEERS.—The Guardians of the Poor of the City of Bristol intend to APPOINT an ENGINEER for their Workhouse, at Stapleton, near Bristol. Salary 60l. per year, with board, lodging, and washing, in the Workhouse. The duties of the Engineer will comprise the care and management of two large steam-boilers, and of the warm and cold water and steam supply; he must have a knowledge of plumbers' work, and will be required to do all the ordinary repairs wanting to the pumps, boilers, cisterns, cooking vessels; gas, water, and steam apparatus; pipes, cocks, and fittings, and all other ordinary repairs in the department of an Engineer and smith throughout the house; and to perform generally any duties which may be assigned to him conformable to the nature of his office. He will be required to devote his whole time to his duties, and to pay strict obedience to the regulations of the Poor Law Board, and the directions of the Guardians.—Applications, with testimonials, are to be sent to St. Peter's Hospital, Bristol on or before FRIDAY, the 9th of SEPTEMBER next; and the same will be considered by the Guardians at their meeting on FRIDAY, the 16th SEPTEMBER next. Preference will be given to a person possessed of knowledge and experience in the management of Gas works.—By order of the Board,
W. B. WILMOT, Clerk.
13th August, 1864.

WANTED, a Good PLUMBER and GASFITTER. Constant employ for a steady industrious man.—Address, Mr. W. SOLLY, South Norwood.

TO BRASS FINISHERS.

WANTED, a thoroughly competent Person as FOREMAN: gas fittings and general. Such as have flat rate testimonials to character and ability may apply, in the first instance, by letter, stating age, last employers, wages expected, &c. to Messrs. PEARD & JACKSON, Manufacturers of Medimeval Art Metal Work, 139, High Holborn, W.C.

TO WRITERS AND GRAINERS

WANTED, immediately, a good WRITER. If he can also do graining would be preferred.—Apply to Mr. J. W. FACEY, 41, Tachbrook-street, Pimlico.

WANTED, immediately, a good GENERAL FOREMAN, to take charge of a Job a few miles from Town.—a Joiner by trade, and must be used to good work. Wages 6s. per day, and expenses.—Apply, by letter, naming references, to G. M. Office of "The Builder."

TO STONE CARVERS

WANTED, THREE or FOUR good STONE CARVERS for Natural Foliage.—Apply to W. P. SMITH, Sculptor, Pease Hill-road, Nottingham.

WANTED, a CLERK in a Timber Merchant's Office in the Country, who writes a good clear hand, is conversant with the general routine of bookkeeping, and capable of taking off sawyers' work, &c. Salary 1l. per week.—Apply by letter, stating age, references, and where last employed, to Mr. R. A. DAVIS, Timber Merchant, Basingstoke.

WANTED, a PLASTERER, to take about forty rooms of plain work. None but sober industrious men who can get help need apply. Also a good sober handy LABOURER, to reside on the premises.—Address, I. I. S. Office of "The Builder."

TO CLERKS OF WORKS.

WANTED, as CLERK of WORKS, to Superintend the Erection and Restoration of Farm-buildings, a Practical Man, capable of taking ground plans and preparing working drawings and specification.—Address, stating age, terms, and references to previous employers, AGRICOLA, Messrs Dawson & Son, 74, Cannon-street, City, E.C.

Also Licensed Lighterman, of 11, Millbank-row, S.W.; and Licensed Lighterman and Wharfinger, of Hermitage Steam Wharf, Wapping, E

TO BRICKMAKERS. — All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of J. B. WHITE & BROTHERS, Erith, Kent.

The advantages of this plan are two-fold.

1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.

2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.

Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster

BRICKS.—TO BE SOLD, about 350,000 good BRICKS, Size, 9 inches by 4½ inches, and 3 inches in depth. They can be delivered at any railway station, or on canal boats. Satisfactory references will be required. —Apply to EXECUTORS of late HENRY HUGHES, Beauchamp-villa, Leamington.

OATES'S PATENT SOLID BRICK MACHINE.—To CONTRACTORS, BUILDERS, BRICKMAKERS, and OTHERS.—Persons about to establish Brickworks, or to enter into large contracts, are respectfully requested to thoroughly inspect the above Machines, which may be seen in operation at the undermentioned works These Machines are guaranteed to produce at the rate of "Thirty Bricks" (and upwards) per minute, sufficiently dense to be wheeled direct from the Machine to the kilns; and, with suitable clay, bricks can be made direct from the mine without any previous preparation.—To view, apply to the Government Dockyard Authorities, Portsmouth; GEORGE SMITH & Co. Contractors, 13, South-street, Grosvenor-square, London; JOHN GRUNDY, Esq. J.P. The Dales, Whitefield, Manchester; JOSEPH MARSDEN, Esq. Bolton-le-Moors, Lancashire; Mr. J. WALKER, Contractor, Patent Solid Brickworks, Crewe, Cheshire; Mr. GRADWELL, Hindpool Saw Mills, Barrow-in-Furness, Lancashire; or at the Works of the Stourbridge Solid Brick Company, Brettell-lane, near Stourbridge—parties who are working the same, and have kindly consented to give every information.—To treat, or for drawings of same, apply to the Patentee, Mr. J. P. OATES, Erdington, near Birmingham; or to Mr. T. S. CROSS, Sole Agent and General Manager, 36, Leamington-terrace, Ravenhurst street, Birmingham.

MANUFACTORY at WALTON STREET.

WEARDE STONE QUARRIES,
LIMITED.
The Stone produced from these Quarries has been proved to be the most durable of any in the market, and can be had for Piching in any sizes; also for Macadamising. Samples sent, with prices, on application to the Manager, E. M. CHOKER, Gunnerslake, Cornwall

LITTLE CASTERTON FREESTONE.
Apply, for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD,
The Owner; and see Specimen at the Museum of Practical Geology, Jermyn-street, W.

This stone (which is a perfect freestone) is raised in blocks of any portable size, and is about 4 feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone of the kind.

*** The above WEATHER STONE is used largely by London Builders.

RED MANSFIELD STONE,
WHITE MANSFIELD STONE,
YELLOW MAGNESIAN or BOLSOVER LIMESTONE.
Consigned in railway trucks, direct from the Quarries, in blocks not exceeding twelve tons; or worked at the Quarries and delivered free from injury at any railway station.
Mr. ROBERT LINDLEY, Mansfield Quarries, Nottinghamshire.

TO CONTRACTORS, QUARRY OWNERS, MINERS, &c.
BLAKE'S STONE BREAKER is recommended by the best Engineers in this and other countries to Break Stone of every description, of the best quality for Macadam Roads, Concrete, Railway Ballasting, &c. It takes in large blocks or round boulders, and reduces them to fine road metal, at a cost of from 2l. to 3l. per 10 tons. If your pauper labourer costs 3s. per day, this machine will do more work, and do it better, at 2l.—For circular testimonials, &c. apply to
H. R. MARSDEN,
SOHO FOUNDRY, LEEDS.

SLATES.—JONES & CO. have a STOCK of SLATES of different sorts, from the best quarries in Wales SLABS and CISTERNS delivered at any station in quantities of not less than five tons, from their depôts.
BANGOR, GARSION, PALTNEY, CHESTER, and GLOUCESTER.
Prices forwarded and estimates given on application.
1, BOLD TERRACE, CHESTER.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand from above or below Bridges, delivered by the yard or per barge. Ballast, screened or unscreened, by the yard or per barge. Stocks, Lime, and Old Bricks. Dry Rubbish delivered, per barge, in any quantity alongside the Thames.

TO IRONMONGERS, BUILDERS, &c.
PATENT WROUGHT-IRON WELDED TUBE for GAS; Galvanized ditto, for Water; High-pressure Cocks, &c. Manufacturers of Dr. Arnott's Improved Ventilators.
BULETT & CO. 55, High Holborn.

DAVID JONES, BRIDGE IRONWORKS, and HERBERT'S PARK IRONWORKS, Bilston, Staffordshire, Manufacturer, under License of the Patentee, of
MALLET'S PATENT BUCKLED IRON PLATES,
for Flooring, for Railway and other Bridges, Viaducts, Wharfs, &c and for the Flooring and other parts of Fire-proof Buildings and various important structural uses. These plates form the lightest, strongest, most rigid, and durable flooring known. They were pronounced by the late Mr. Brunel, "the best bridge flooring extant." They have been adopted on the New Bridge, Westminster, on the Indian Railways, and in many other first-class structures, by Messrs. Page, Hawkshaw, Reudel, Stephenson, and other Engineers; and for Fire-proof Buildings by Government, the Waroffice, Metropolitan Board of Works, and other important uses. Application for lithographic circulars, prices, and other information as to supply of the Plates, to be made to the Manufacturer as above, or to ROBERT MALLET, Esq. C.E. the Patentee, 11, Bridge-street, Westminster. N.B.—Manufacturer for Boiler Plates, Bridge and Ship Plates, also Sheet Iron of all Gauge, and Rivet Iron of first quality.—Address, BILSTON IRON WORKS, Bilston, Staffordshire.

THE BUILDER'S COMBINED MACHINE, for Sawing, Mortising, Tenoning, Grooving, Rabbeting, and Boring. Worked by manual or steam power. Price 17l. J. T. MARKALL, Patentee and Manufacturer, 33, Fieldgate-street, Whitechapel-road, London, E.

EXHIBITION of WORKS of CHRISTIAN ART at MECHLIN, BELGIUM.—Exhibition of choice Works of Art of the Mediæval and Renaissance periods, on loan from churches, corporations, and private collections, to OPEN AUGUST 29th, and remain on view until SEPTEMBER 25th.—Admission, until September 3rd, 2 francs; after that date, 1 franc.

TO BUILDERS.—10-Horse Power Horizontal ENGINE, nearly new Cornish BOILER, and Vertical SAW-FRAME for SALE, cheap, to make room for larger.—inquire of Mr. WILLIAM TOYOUS, Builder, 1, Charles-street, Plumstead, S.E. near the Arsenal Railway-station, where they may be seen.

CARR'S PATENT DISINTEGRATOR, for finely granulating five tons an hour of superphosphate, guano, sugar scum, bone ash, coal, and other non-fibrous material, and for mixing meat smears, &c. Also
CARR'S PATENT LEVIGATOR MILLS, or PESTLE and MORTAR SUPERSEDER (grinding parts of Wedgwood ware), for reducing to an impalpable powder chemicals, drugs, colours, dyes, sugar, salt, &c. Larger sizes made for steam power for grinding bone ash, chocolate, &c. and for kneading putty, clay, and mortar. Also
CARR'S PATENT AMALGAMATOR, AGITATOR, and MIXER, with self-unloading vat and reverse-acting stirrers, for intimately intermixing and combining liquids with powdered soils, such as vitriolizing ground bone, coprolite, &c. &c. and for washing tanners' bark and dressings, rags for paper, &c.

Illustrated circulars, with first class testimonials of any of the above efficient machines, adapted for both hand and steam power, will be sent free on application to the Patentee.
THOMAS CARR, Montpelier, Bristol (late of New Ferry, near Birkenhead).

TEMPORARY OFFICES.
The Liverpool Financial Association's Offices, 32, Castle street, Liverpool.

PROSPECTUS.

The Mersey Steam Saw Mills Company, Limited, have arranged to purchase, upon advantageous terms, from Matthew Gregson, esq. the extensive and most complete mills, known as the Mersey Steam Saw Mills and have also secured the powerful mills of the Brunswick Steam Saw Mills Company, a new and efficient operation, at the dock wall, very convenient. The purchase will embrace also the well-established and long-established business connexions of both extensive firms.

The object, therefore, of this Company is to purchase these important concerns, and to work them so as fully to meet, at all times, the great requirements of the vast timber trade of the port.

Mr. Matthew Gregson having consented to act as Chairman, the Company will have the advantage of his long experience of forty years in superintending the working of the mills.

These mills are driven by steam engines of a number of two hundred nominal horse power. They are in two divisions; the South Mills are contiguous to the Brunswick Dock, and within a short length of castage to the new docks of the Great Northern and Manchester, Sheffield, and Lincolnshire Railways, and also to the London and North-Western Railway, and to the docks of the inland water conveyances.

The North Mills lie directly opposite the yards and storage ground of the Timber Trade at the Canada Dock, and within a short radius of the stations of the London and North Western and Lancashire and Yorkshire Railway Companies, and the timber trade centres more conveniently at the Customs' Dock. The great ship-building yards and Graving Docks, both North and South, are within easy distance of the mills.

The admirable position of these Mills secures the easiest access to the great timber ports, and to the chief lines of internal communication, while the rapidity and economy of transit for the interchange of timber from one place to another by the various modes of shippers generally, as well as of the building trade created by the giant strides which the town is making at the north and south ends.

The Directors also propose to take power to erect Mills at Birkenhead.

In addition to the Mills mentioned above, the Company will come into possession of 35,000 yards and upwards of land, with valuable and extensive frontages near the docks, used as storage for timber, and daily receiving in value.

The Company, by entering thus at once upon a most valuable and profitable business, created during the long experience of its present proprietors, will be saved those delays usually incident to the bringing of a new company into active operation.

It is the desire of the Directors to devote special attention to the manufacture requisites for cutting hardwood and other furniture woods into veneers, in order to make provision for those branches of trade now largely increasing at this port.

A considerable number of shares are already subscribed for. The promoters of this Company desire to encourage the large and influential body of consumers of timber to take shares, and so to create that community of interest which at all times tends so much to the general benefit.

In the event of no allotment being made, the deposits will be returned in full. Should a less number of shares be allotted than is applied for, the deposit will be made available towards the payment on allotment, and the balance, if any, returned to the applicant.

Applications for prospectuses and forms to be made to the Liverpool Financial Association, at the temporary Offices, or to the Brokers or Solicitors of the Company (where copies of the Articles of Association may be seen); or at the Mills at the North and South.

FORM OF APPLICATION FOR SHARES.
To be retained by the Bankers.
To the Directors of the Mersey Steam Saw Mills Company, Limited.
Gentlemen,—Having paid to your bankers the sum of £ : : being a deposit of 1l. per share on shares in the above Company, I hereby request that you will allot me that number, and I agree to accept the same, or any less number you may allot me; to pay to your bankers the sum of 2l. per share on allotment, and to sign the Articles of Association of the Company when required, and I authorise you to place my name on the register of members for the number of shares allotted to me.

MANUFACTORY and CITY SHOW ROOMS, 147, HOUNDSDITCH.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.
ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three quantities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

The ONLY MEDAL "for STONEWARE" has been awarded to DOULTON & WATTS, LAMBETH POTTERY, LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

READE & HEWITT'S PATENT PNEU-

MATIC PAN and SELF-ACTING WATER CLOSETS, RAILWAY URINAL, and SEWER FLUSHING APPARATUS.

The simplest, strongest, and cheapest Closets in use, actuated efficiently with or without Supply Cistern, and at high or low pressure. Specially adapted for railway stations, public buildings, workshops, and any situation where subject to severe usage. Prevents waste of water, saves piping, cranks, wires, service box, and all the complicated apparatus of self acting closets.

The Self-acting Pneumatic Flushing Vessel flushes ranges of urinals regularly at intervals, the time between the discharge being regulated by a simple tap, thus saving an immense quantity of water, which ordinarily runs to waste

Best Pan Closet, complete	£2 12 6
Best Self-acting Closet, complete	2 15 0

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.
By Her Majesty's Royal Letters Patent.
F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,
Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronized by
HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.
And by the most eminent Members of the Royal Agricultural Societies of England, Scotland, and Ireland, at whose great national shows it has been exhibited, and OBTAINED THE PRIZE for being the cheapest, neatest, and best article for roofing, also used for inner sheeting at the Royal Agricultural Society's House, Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is superior to tar, snow, and frost, and a non conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its use and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, sent free to any part of the town or country. DRY HAIR FELT, for covering Boilers &c. is also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the most means of being supplied with a good article, at the cheapest and best suited to their roofs. The Patent works where the above articles are made are F. McNEILL & CO.'S Manufactories, LAMB'S BUILDINGS BUNHILL ROW. Roofs covered with McNEILL'S FELT to be seen at the CAMPS of ALDERSHOTT, CURRAGH, SHORNCLIFFE, and COLCHESTER, upwards of Three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, of nearly One Million Feet. A Liberal Discount allowed to the Trade.

MATHEMATICAL DRAWING INSTRUMENTS, THEODOLITES, LEVELS, CIRCUMFERENTERS, SCALES, TAPES, CHAINS, T SQUARES, RULES, &c.

JOHN ARCHBUTT & SONS,
20, WESTMINSTER BRIDGE ROAD, LAMBETH,
Near Astley's Theatre,
Respectfully inform the Public that their Illustrated Price List will be forwarded free on application. The prices will be found much below those usually charged. Second-hand Instruments of all kinds, by the best makers, always on sale.

GUTTA-PERCHA MILL-BANDS.—The Gutta Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractility and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union-joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.

SOUTH NORWOOD.—First-class Freehold Building Land, in a very healthy and picturesque locality, within five minutes' walk of the Norwood Junction Station, on the London, Brighton, and South Coast Railway, only a short distance from the Anerley Station, on the Mid Kent Railway, affording access to London Bridge, Victoria, Charing-Cross, Crystal Palace, &c. at frequent intervals throughout the day

MESSRS. WINSTANLEY & HORWOOD will offer for SALE by AUCTION, at the GUILDHALL HOTEL, Gresham-street, on TUESDAY, AUGUST 30, in 26 lots, a PORTION of the valuable FREEHOLD PROPERTY, known as Elmore Park, Land tax redeemed, having a large frontage to the Norwood Junction Station, with which it is connected by a short road, and is now being made over the adjoining lands. The land is approached by capital roads, known as Birchanger, Howard, and Elmore roads, admirably adapted for the erection of detached villas or cottage residences, for which there is a great demand in this thriving and rapidly-increasing neighbourhood, and is divided into 24 plots of 50 feet each, by a depth of about 200 feet; and two of about 300 feet, by a cross depth. The water mains of two companies are laid on to the Estate, and gas is already supplied at Woodside green Possession may be had on completion of the purchase and the plots viewed at any time—Particulars, with plans, are being prepared and will be ready twenty days previous to the sale. In the meantime, further particulars may be obtained on application to Messrs DRUMMONDS, ROBINSON, & TILL, Solicitors, Croydon, S.; and Messrs. WINSTANLEY & HORWOOD, Auctioneers, Surveyors, and House Agents, 15, Paternoster-row, St Paul's, E.C.

KENNINGTON CROSS.—Norwood Drainage and Railway Cart Horses, Broad and Narrow Wheel Carts, Tilt and Chain Harness, &c.—To Contractors, Builders, Woodmen, and Others.

MR. J. GOWER will SELL by AUCTION, on the PREMISES, as above, on WEDNESDAY, AUGUST 31, at TWELVE o'clock, without reserve, FIFTY Young, Powerful, Active CART HORSES, twenty carts, broad and narrow wheel, brick, rubbish, skip, and water; Chill and chain harness, &c. the property of Mr. Thos. Pearson. Have been employed on the drainage works at Norwood, and South London Railway, nearly completed.—On view two days prior. Catalogues on the Premises, and of the Auctioneer, at his Repository, Burtonn.

LEYTONSTONE, ESSEX.—Remaining portion of Estate, comprising Twelve Acres of Park-like Building Ground.

MR. JOHN M. DEAN will SELL by AUCTION, at the PLOUGH and HARROW TAVERN, Leytonstone, on THURSDAY, SEPTEMBER 1, at THREE, in lots, TWELVE ACRES of FREEHOLD BUILDING GROUND, about equally divided from land-tax, situate at Harrow green, on the high road from Stratford to Leytonstone, within a short distance of the Leyton Railway Station, having frontages to roads leading out of the Leytonstone high road. The land is rich and dry, with a gravelly subsoil, and is particularly eligible for the erection of good dwelling-houses.—May be viewed, and particulars and conditions of sale, with plans, had at the Place of Sale; of Messrs. GLYNES, EDELL, & GLYNES, Solicitors, No. 8, George-yard, Lombard-street; and of Mr. JOHN M. DEAN, Auctioneer and Surveyor, The Grove, Stratford, E.

CAMDEN TOWN. To Builders, Cabinet-makers, and Others.

MESSRS. LEREW & LEREW will SELL by AUCTION, at CAMDEN-TERRACE, on MONDAY, AUGUST 29th, and following day, at TWELVE for ONE, 100 planks, deals, and battens, 50 squares flooring, 12 squares 9-inch tongue boards, 4,000 feet mahogany, 2½ tons cast iron, oak, beech, and deal timber, 12,000 feet quartering, joyce stuff, 80 new doors, 50 sashes, joists, 20 ladders, pony, van, 2 carts, harness, 3 trollers, also a large quantity of excellent oak materials, 4 capital baking ovens, &c.—Auction Offices, 2, Cardington-street, Hampstead-road.

TO TIMBER MERCHANTS, BARGE BUILDERS, WHEELWRIGHTS, CABINETMAKERS, ORGAN BUILDERS, &c.

THOMAS ROBERTS & CO. will SELL by AUCTION, on the PREMISES, Lett's Wharf, Commercial-road, Lambeth, on TUESDAY, the 6th of SEPTEMBER, 1864, at ELEVEN o'clock precisely, the SECOND PORTION of the well-seasoned STOCK; consisting of Spanish and Honduras Mahogany, in planks and boards, 5,000 feet dry American birch, 25,000 feet of long wide pine boards, 30,000 feet of English oak, in logs and plank; 50,000 feet of elm plank and boards, 5,000 feet of dry walnut, 70 squares of prime yellow floor pine boards, 6 yellow deals and battens, ash, lime-tree, poplar, &c. &c.—To be viewed one day prior and morning of Sale. Catalogues to be had at the Place of Sale, and of the Auctioneers, 9, Billiter-street, E.C.

TO BRICKMAKERS, BUILDERS, AND OTHERS.

MR. G. KEATS is instructed to SELL by AUCTION, at the SWAN INN, Stratford, Essex, on MONDAY, AUGUST 29, 1864, at TWO, in One Lot, a valuable ESTATE; consisting of 6a. 3r. 25p. the most part fine brick earth, with considerable building frontages to Romford-road, Green-lane, and Leytonstone-road. It offers a good investment to capitalists, as it is estimated that over fifty millions of bricks may be made and still leave the land available for building purposes.—Particulars, with plans and conditions of Sale, may be had at the Swan Inn, Stratford; of J. OTWAY, Esq. Solicitor, Stratford; T. INGHAM, Esq. on the Estate; the Plough and Harrow, Leytonstone; and of the Auctioneer, Grange Park-road, Leyton.

PIMLICO.—To Families, Licensed Victuallers, and Others.—Stock of Wines, Spirits, and capital Fittings of the "Wheatsheaf," the corner of Lower Grosvenor-place.

MR. GEO. HAINES is instructed by the Proprietor to peremptorily SELL by AUCTION, on the PREMISES, on WEDNESDAY, 31st AUGUST, at TWELVE precisely, the remaining STOCK of 86 dozen of choice old wines, 41 dozen Cognac brandy, rum, whisky, and gin; the complete fittings of the spacious bars, with a range of metal-top counters and 46 brass sprittaps, 9 beer-engines and fittings, 2 fine-toned pianofortes, furniture, wine and beer measures, refrigerator, 40 very large splrit vats and bar casks, carved pediments, chefoniers, show cases, pedestal desks, marble lamp, Royal coats of arms, numerous gas brackets, plate glass doors, brass taps, fixtures, useful fittings, and the *Times* paper for several years.—May be viewed on TUESDAY. Catalogues on the Premises; of Messrs. LEWIS & SON, Auctioneers, Moorgate-street; and at the Auctioneer's Offices, Grosvenor street West, Eaton-square, and No. 12, High-street, Kensington

CROYDON, SURREY.—Important Freehold Building Land, nearly contiguous to the Addiscombe Railway Station, and within a few minutes' walk of the other Croydon Stations

MESSRS. BLAKE will SELL by AUCTION, at the GREYHOUND INN, Croydon, on WEDNESDAY, AUGUST 31, at SIX for SEVEN o'clock in the Evening, Eighty Lots of very Eligible BUILDING LAND, being the first portion of the Leslie Estate, lying on the northern side of St. James's-road, and on the western side of the Heath Lodge Estate. The land is set out in lots of 15 and 20 feet frontages, respectively, to capital 40 feet roads, named Al xandra, Albert, and Frederick roads. The subsoil is a deep rock of gravel, and sewers and drains are in all the roads, and the water-main of the Local Board is in the adjoining high road. In order to preserve the respectability of the neighbourhood, the purchasers will be properly restricted as to the value of the houses to be erected and the lines of building frontages to be observed.—Particulars, with plans, may be had seven days before the sale at the Greyhound Inn, Croydon; the Leslie Arms, Croydon Common; at Garraway's Coffee-house, Change-alley, Cornhill; of Messrs. DRUMMOND, ROBINSON, & TILL, Solicitors, Croydon; and of Messrs. BLAKE, Croydon.

TO PAINTERS, DECORATORS, PLUMBERS, GAS FITTERS, &c.—A BUSINESS TO BE DISPOSED OF, with the Lease of the Premises, in one of the best situations of the West end.—For particulars, apply at 16, Albert terrace, Bishop's-road, Bayswater.

IRON FOUNDRY TO BE LET, with immediate possession, established thirteen years. Rent low, and requiring only a small capital for incoming—For particulars apply to H. CLAYTON & CO. Brick and Tile Machine Makers, Atlas Works, Upper Park-place, Dorset-square, London, N.W.

BROMLEY, KENT. — Beautiful FREEHOLD BUILDING SITES, with a registered title under the new Act, adjoining the Shortlands Station on the Mid Kent Railway. Messrs. DRIVER & TEWSON beg to announce that the title to the Shortlands Estate having been investigated and approved by the Court of Registry, they are now in a position to SELL any of the remaining LOTS, with a registered and indefeasible title; the effect of which will be to reduce the present and all future purchasers' legal expenses to an almost nominal amount, the immense advantages of which to all purchasers, and especially to those intending to deal with or build upon the land, can hardly be over-estimated, as not only will the title be each for be absolutely indisputable, but sales of the whole or any of the houses to be built thereon, will be as simple and inexpensive as the transfer of a share or money in the funds. The advantage, in addition to the proposed supply of water by the Kent Waterworks, and of gas by the Bromley Gas Company, cannot fail to render any building operations on an extensive scale an eminently successful speculation. The unsold lots vary in extent from 1 to 13 acres, with an undulating surface and a varying soil of gravel, sand, and clay. They are within a few minutes' walk of the Shortlands Station, and only ten miles from London Bridge.—For particulars and plans may be obtained of Messrs. DEBENHAM & TEWSON, 80, Cheapside,

TO RESPECTABLE BUILDERS of SMALLISH HOUSES.—Firstly, TO BE LET, a Piece of FREEHOLD BUILDING GROUND, for three pairs of Cottages, which are much wanted, at 3l. per pair ground-rent. Secondly, a beautiful Site for Houses, at 20l. and 30l. per year, at 2s. 6d. per foot. Thirdly, Shops, &c. Large Plans drawn on to the land at 1s. per yard Fair advances if required.—Apply, near the above, to Mr. FRAZER, Railway Hotel, Caterham, Surrey.

LAND TO BE LET, by TENDER, on the 20th SEPTEMBER, by the Fishmongers' Company, on a Building Lease for ninety years, situate on the east side of Pudding lane, in the centre of the fruit market, containing a frontage of 36 feet 9 inches, with a medium depth of about 76 feet, highly suitable for warehouses, shops, or other business premises.—Apply to Mr. W. B. TOWSE, Fishmongers' Hall, London Bridge; or to Mr RICHARD SUTER, Architect and Surveyor, 27, Gracechurch street, where plans and particulars may be seen. Tenders to be delivered before TWELVE o'clock on the 20th SEPTEMBER, 1864.

LARGE BUSINESS PREMISES, to BE LET, or the LEASE TO BE SOLD (near the Baker-street Station of the Metropolitan Railway) Have for many years been occupied by an engineer, are suitable for various manufacturing purposes, or for carrying on a builder or carpenter. Has waggon entrance, large covered shops and yard, with rooms and stores over. A steam engine and boiler upon the premises.—For particulars and to apply to CLAYTON & CO. Brick and Tile Machine Makers, Atlas Works, Upper Park place, Dorset-square, N.W

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72—74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Cooking Utensils, &c. to meet the great public demand; and also for the consequent more extensive execution of all descriptions of hot water, bath, laundry, and steam work.

72—74, Bishopsgate-street Within.

ARCHITECTURAL DRAWING

CLASSES, for Architects, Builders' Sons, Assistants, &c.—Conducted by Mr. T. J. HILL, Architect, for giving Day Instruction in Architectural, Perspective, Isometrical, and Geometrical Drawing; making Finished and Working Drawings, preparing Specifications, taking out Quantities, estimating Builders' Work, &c. Terms, Three Guineas per quarter.—Prospectuses and full particulars may be had at the Offices, 76, Old-street, City-road.

COMPETITIONS.

TO ARCHITECTS.—COMPETITION DESIGNS for St. JAMES'S CHURCH, Waterloo-street, Little Bolton.—The Charitable Trustees, under the will of the late John Barrow, esq. are desirous of obtaining DESIGNS, &c. for a CHURCH, to be erected on land belonging to them in Waterloo-street, Little Bolton. The land for the site forms a parallelogram of 62½ yards long, by 44 yards wide, and contains (including one half of Waterloo-street, of 14 yards wide, and the half of three other streets of 12 yards wide, each running along the other three sides of the land) 2,736 superficial square yards. The frontage to Waterloo-street, which runs near east and west, is 62½ yards. It is desired that the Church shall afford comfortable sitting accommodation for 1,000 persons, and that the outlay shall not exceed 5,000l. The plans to be drawn in line only, to a scale of 10 feet to 1 inch. Each set of designs to comprise plan, interior, exterior, and sectional elevations, and perspective view, with the estimated cost of construction and completion of the design, exclusive of the land, but inclusive of all internal fittings and work. The designs to be forwarded to the Rev. HENRY POWELL, Vicar of Bolton, under motto or cypher only, accompanied by a sealed letter, containing the real name and address of the person furnishing the design, on or before the 30th SEPTEMBER, 1864. A premium of 50l will be given to the person whose design the Trustees shall deem the best, and such design shall be the property of the Trustees, who shall not be bound to employ the successful person as architect, though they will be disposed to treat with him for the purpose. The unsuccessful designs will be returned to the addresses of the respective owners, by the usual modes of conveyance; but the Trustees will not be responsible for their safe delivery, nor for any payment to the owners in respect of such plans, or of the adoption of any part of any of them in the erection of the Church.—Further particulars may be obtained from the Rev. HENRY POWELL, Vicar of Bolton; JOHN RICK, Esq.; or THOMAS LEVER RUSHTON, Esq. three of the Charitable Trustees under the will of the late John Barrow, esq. deceased.

TO ARCHITECTS.—The SIR TATTON SYKES MEMORIAL.—The Committee for the Erection of a Memorial to the late Sir Tatton Sykes, Bart. are prepared to receive DESIGNS and ESTIMATES for the ERECTION of an OBELISK or COLUMN, on an elevated site on the Sledmere Estate, on the Yorkshire Wolds, near Driffield. Designs and Estimates to be sent to the Honorary Secretaries, on or before the 1st day of OCTOBER next. Twenty pounds will be given for the design considered the most suitable by the Committee, and ten pounds for the second-best design.—Particulars to be had on application to

WM. TOPHAM, } Hon. Secs.
Driffield, 1st August, 1864. F. C. MATTHEWS, }

BOROUGH of BOLTON. — COMPETITION PLANS for NEW TOWN HALL.—To ARCHITECTS, &c. &c.—The Bolton Corporation purpose ERECTING in the Borough a TOWN HALL, covering an area of about 4,300 square yards, and are desirous of obtaining Plans, Sections, and Working Drawings for same. Premiums will be given as follows, viz.—75l. for the best, 50l. for the second best, and 40l. for the third best design in the opinion of the Council; but the Corporation will not be responsible for any payment for unsuccessful designs. The plans of the three successful competitors to be the property of the Corporation.—Applications to be made to Mr. BAYLIS, the Borough Surveyor, who will show the ground, and give any further information on the subject. The designs must be sent in, under seal, without signature, with a private mark or motto, and a letter accompanying them also under seal, containing the corresponding mark or motto, and the designer's name and address. They must be addressed to the Town Clerk, and delivered in on or before the 1st DECEMBER, 1864.

ROBT. G. HINNELL, Town Clerk.

Bolton, 11th August, 1864.

PROPOSED CEMETERY at BURTON-UPON-TRENT.—TO ARCHITECTS, LAND-SCAPE GARDENERS &c.—The Burton-upon-Trent Improvement Commissioners, who are also appointed a Burial Board for the town of Burton-upon-Trent, are desirous of receiving PLANS, ESTIMATES, and GENERAL SPECIFICATIONS for the ERECTION of TWO CHAPELS, Residences for the Registrar and Sexton and Walls; also for Laying out and Fencing the Grounds and Constructing Drains and Footpaths in the proposed Cemetery, consisting of 12 acres; the whole cost, exclusive of the purchase of the land, not to exceed 6,000l. A premium of 50l will be given for the most approved plans, estimates, and specifications, and 25l. for the second best. Should the author of the approved plans be employed in carrying out the works, the premium of 50l. will be deducted from the Architect's commission. A lithographed plan of the ground, and any information required, may be obtained on application to me on and after the 12th day of SEPTEMBER next; and the plans, &c. accompanied by a letter with a motto, are to be forwarded to me on or before the 12th day of OCTOBER, 1864.—By order of the Board,

WILLIAM COXON, Clerk.

Public Offices 53, High-street, Burton-on-Trent.

TO ENGINEERS, MILLWRIGHTS, &c. COMPETITION PLANS.—The Visiting Justices of the House of Correction at the Cold Bath Fields, Clerkenwell, are desirous of obtaining PLANS for the CONSTRUCTION of a SET of TREADWHEELS at that Prison, of sufficient extent and strength to work 150 men at one time. The length of the wheel in which the men are to be erected is 192 feet; breadth, 12 feet; height, 21 feet. Each plan is to be accompanied by an estimate of the cost, and a description of the proposed works; and must be forwarded to the Prison, with some motto or mark, and the name and address of the Tender, in a sealed letter, bearing the same motto or mark, by WEDNESDAY, the 5th of OCTOBER next. The Visiting Justices will give a premium of £20 to the author of the plan which shall be most approved of by them; and the plan is to become their property, but they do not bind themselves to adopt it, either partly or entirely, nor to employ the author to execute, improve, or alter, or amend the construction of the works.—Any further information may be obtained by application at the Prison, on any Monday, Tuesday, or Wednesday, between TEN and ONE.

JOHN S. SCAIFE, Clerk to the Visiting Justices.

August 29, 1864.

CONTRACTS.

COAST GUARD CONTRACT.—NOTICE to BUILDERS and CONTRACTORS.

Persons desirous of TENDERING for the ERECTION of a COAST GUARD STATION at Sandgate, near Folkestone, in the county of Kent, may inspect the Drawings and Specification at the Coast Guard Watch Room, Sandgate, or at this Office, between the hours of TEN and FOUR, from THURSDAY, the 25th inst. to WEDNESDAY, the 7th day of SEPTEMBER, now next ensuing, and both inclusive (Sundays excepted).

Tenders to be sent to this Office not later than TWELVE o'clock at noon, of the 8th SEPTEMBER, under seal and directed to the Commodore Controller-General of Coast-Guard, and endorsed "Tender for Sandgate."

The Lords Commissioners of the Admiralty do not pledge themselves to accept the lowest or either of the Tenders.

Dated this 17th day of August, 1864, at the Admiralty, Coast-Guard Office, 12, Spring-gardens, London, S.W.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS

TENDERS are required for ERECTING an IRON SHED, 94 feet long and 46 feet wide, at the Gun Wharf, Portsmouth.

Persons desiring to Tender for the execution of this Work must leave their names at this Office on or before the 6th SEPTEMBER, 1864, and pay the sum of Ten Shillings and Sixpence for the Bills of Quantities.

The Secretary of State does not bind himself to accept the lowest or any Tender. J. W. GORDON, Colonel,
Commanding Royal Engineer,

Royal Engineer Office, Portsmouth,
24th August, 1864.

TO BUILDERS.—The Board of Guardians of St. Matthew, Bethnal-green, are willing to receive TENDERS for the ERECTION of BOARD ROOM and OFFICES at the Workhouse, Weaver-road, Bethnal-green, from the designs of their Architect, F. N. CLIFTON, 7, East-India-avenue, Leadenhall-street, E.C. Copies of the quantities may be obtained of Messrs. WILLIAMS & SCHOFIELD, 12, Mecklenburgh-street, Russell-square, W.C. The Board do not bind themselves to accept the lowest Tender, and will require the builder whose Tender is accepted to give the names of two sureties to be bound formally with himself in the sum of £1000 for the due execution of the works. Tenders to be delivered at the Office of W. T. HOWARD, Esq. Clerk to the Board, Waterloo-road, Bethnal-green, before SIX o'clock, p.m. on MONDAY, the 12th of SEPTEMBER next; and personal attendance will be necessary at the Board on TUESDAY, SEPTEMBER 13, the following day, at FOUR o'clock precisely.

TO CONTRACTORS and FINANCIAL ASSOCIATIONS.—WEST GRINSTEAD, CUCKFIELD, and HAYWARD'S HEATH RAILWAY COMPANY. The Directors of this Company are prepared to receive PROPOSALS for the CONSTRUCTION of the above RAILWAY in two sections: No. 1 from Hayward's Heath to Bolney (about 6 miles), and No. 2 from Horsted to West Grinstead, (five miles). The Brighton Company have agreed to work the line, and the plans and sections can be inspected and further information can be obtained, from J. H. TOLME, Esq. the Engineer to the Company, 10, Duke-street, Westminster; of G. T. PORTER Esq. 4, Victoria-street, Westminster; or of the Secretary. Proposals in writing, stating full particulars, must be sent to us on or before the 20th of SEPTEMBER next.

EDWARD WAUGH, Secretary.

Cuckfield, 24th August, 1864.

BIRKENHEAD UNION.—The Guardians of the Poor of the Birkenhead Union, in the County of Chester, are desirous of receiving TENDERS for the ERECTION and COMPLETION of a HOSPITAL, to be built in close proximity with the new Workhouse at Higher Tranmere, Separate and distinct Tenders will be required for the execution of the Works, namely, 1st, for the execution of that part detailed in specification, marked No. 1; 2nd, for the erection of the Work as detailed in specification marked No. 2. Persons desirous of Tendering are informed that good brick clay may be obtained on the land belonging to the Board, and used on payment of a moderate royalty. For this purpose the Contractor will be required to prepare the clay during the autumn, so that the bricks may be manufactured and the buildings proceeded with early in the ensuing spring; it is also the intention of the guardians to execute only the first portion before the month of April next; the second portion of the building to be constructed as soon afterwards as the Guardians may determine. The drawings and specifications may be seen, and further information obtained, on and after the 10th of inst. at the Office of Mr. THOS. LAYLAND, Architect, 49, North John-street, Liverpool. Sealed Tenders to be delivered to me, at my Office, 60, Lord-street, Birkenhead, on or after TWELVE o'clock at noon on FRIDAY, the 30th day of SEPTEMBER next. The Guardians are not bound to receive or accept the lowest or any Tender. PLIFR GREGORY, Clerk.

60, Lord-street, Birkenhead, 17th August, 1864.

TO BUILDERS and CONTRACTORS.—Persons desirous of TENDERING for the ENLARGEMENT of GRAYS THURROCK CHURCH, Essex, may see the drawings and specification at the Angel Hotel, Grays Thurrock, on and after the 17th inst. Tenders to be sent to the REV. W. H. RICHARDS, the Vicarage, Grays Thurrock, near Rochford before the 15th of OCTOBER next. The Committee do not pledge themselves to accept the lowest or any Tender.

TO BUILDERS. — Surrey County Lunatic Asylum.—Parties willing to CONTRACT for the ERECTION of a new BRICK WALL, being 1,480 feet (or 1,974 feet, including the Piling and Planking) after Wall-faced with Materials, are requested to send in sealed Tenders for the same on or before FRIDAY, the 9th day of SEPTEMBER next addressed to the Committee of Visitors, Surrey County Lunatic Asylum, Tooting, Surrey, and endorsed "Tender for Brickwork." Plans, specifications, and other particulars may be had on application to the Steward of the Asylum, any day between TEN and FOUR P.M.

N.B. The Committee do not bind themselves to accept the lowest or any Tender. By order,

J. BRIDGLAND, Clerk to the Committee of Visitors.

23rd August, 1864.

[For remainder of Contracts see next Page.

TO BUILDERS and OTHERS. — The Guardians of the Whitechapel Union will meet at their Board-room, at the Whitechapel Workhouse, Charles-street, Mile-end New-town, N.E. on TUESDAY, the 13th day of SEPTEMBER, at SIX o'clock in the Evening, to receive TENDERS and contract for the ERECTION of a BOILER HOUSE and CHIMNEY-SHAFT, setting of Boiler, Formation of a Tunnel, and other Works, at their Industrial School, Forest-lane, Stratford, Essex. Tenders to be sealed up, and endorsed "Tender for Bricklayers' Work." The plans and specification may be inspected at the Office of Mr. HUDSON, Surveyor, No. 40, Leman-street, Whitechapel. The Guardians will not be bound to accept the lowest or any Tender. G. ADAMS FARR, Clerk.

Clerk's Office, Whitechapel Workhouse, 27th August, 1864.

TO BOILER MAKERS and OTHERS. — The Guardians of the Whitechapel Union will meet in their Board Room, at the Whitechapel Workhouse, Charles-street, Mile End New Town, N.E. on TUESDAY, the 13th day of SEPTEMBER, at SIX o'clock in the evening, to receive TENDERS and CONTRACT for a NEW STEAM BOILER, &c. to be ERECTED and FIXED at their Industrial School, Forest-lane, Stratford, Essex.—Tenders to be sealed up and endorsed "Tender for Boiler." The plans and specification may be inspected at the Office of Mr. HUDSON, Surveyor, No. 40, Leman-street, Whitechapel. — The Guardians will not be bound to accept the lowest or any Tender.

G. ADAMS FARR, Clerk.

Clerks' Office, Whitechapel Workhouse, 27th August, 1864.

NOTICE.—LANDS belonging to the War Department, at Sheerness and Slough, in the parish of All-hallows, Isle of Grain, TO BE LET by TENDER.

TO BE LET, from Michaelmas, 1864, the undermentioned Plots and Lettings:—

Name of Present Tenant.	No. of Plot	Contents. A.	R.	P.
SHEERNESS.				
Mr Joseph Goodine ..... Stocton.	5	10	3	15

MARTIN & PEWTRESS, 15, Park-place, Leeds. N.B. — Tenders addressed to the secretary, Gas & Water Company, West Hartlepool, will be received up to SATURDAY, the 17th of SEPTEMBER next; but the Company do not bind themselves to accept the lowest or any Tender

August 29, 1864.

NOTICE. — To STONE MERCHANTS, PAVIORS, CONTRACTORS, and OTHERS.—The Woolwich Local Board of Health will meet at their Board-room, William street, at SEVEN o'clock in the evening of TUESDAY, the 13th instant, to receive TENDERS from parties desirous of SUPPLYING and LAYING in such streets within the parish, as may be directed, about 15,000 feet super of first-class 9-inch YORK PAVING, and about 600 lineal feet super of 24-inch YORK PAVING, both Kerb and Channel. Also for the SUPPLYING and LAYING of about 2,500 feet run of ABERDEEN GRANITE KERB, 12 inches by 6 inches, and about 500 yards super of ABERDEEN GRANITE PANNELLING in causeway sets, 4 inches by 6 inches.—Copies of the specification, with form of Tender, &c. &c. each, may be had by application to Mr. REED, Clerk to the Local Board, and further particulars secured on application to Mr. BARNETT, Surveyor to the said Board. Tenders endorsed "Tenders for Paving," &c. addressed to the Clerk, to be delivered at the Board room of the Local Board of Health, before SEVEN o'clock p.m. on TUESDAY, the 13th instant. Security will be required for the due performance of the Contract. The Board do not bind themselves to accept the lowest or any Tender.—By order,

ANDREW C. REED, Clerk.

Town hall, Woolwich, 1st September, 1864.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of a CHAPEL at Delph, near Saddleworth, Yorkshire, for Additions to Schools, are requested to send in their names, without delay, as time is limited, to the Architects, Messrs. WM. G. HABERSHON & PITE, 38, Bloomsbury-square, London, W.C.

TO BUILDERS. — The Directors of the Gloucester Spread Eagle Hotel Company (Limited) are ready to receive TENDERS for the ERECTION of a NEW HOTEL, STABLING, and other BUILDINGS, on the site of the present Spread Eagle Hotel, Northgate street, Gloucester. Persons desirous of Contracting for the Works may see the drawings and specifications at the Offices of the Architects, Messrs MEDLAND, MASEBY, & MEDLAND, Clarence street, Gloucester, after MONDAY, the 5th inst. and may obtain Bills of Quantities and Form of Tender on payment of One Guinea. Tenders, sealed and indorsed "Tender for Hotel," to be sent under cover to the Secretary, King-street, Gloucester, not later than MONDAY, the 26th instant. The Directors do not pledge themselves to accept the lowest or any Tender. By order of the Directors, H. T. LOVEGROVE, Secretary pro. tem.

King-street, 1st September, 1864.

TO BUILDERS.—CROYDON UNION NEW WORKHOUSE.—The Guardians are desirous of receiving TENDERS for the ERECTION of a New WORKHOUSE at Queen's-road, Croydon. The plans and specification can be inspected, and other particulars obtained, on application to Mr. JOHN BERNEY, at his Office, Nethercid Croydon, on and after the 12th of SEPTEMBER next. Copies of the quantities may be obtained of Mr THOMAS F. FRANCIS, Clerk of Works, 3, Adelaide-place, London Bridge, up to the evening with him the sum of 3/. 3s. which will be returned after the delivery of the Tender. Sealed Tenders, addressed to me, and indorsed "Tender for a New Workhouse," to be delivered at my Office, as under, on or before MONDAY, the 26th day of SEPTEMBER next. The Guardians do not bind themselves to accept the lowest or any Tender. The Guardians will require the builder whose Tender is accepted to give the names of two responsible parties to be joint bound with himself in the sum of 3,000/. for the due execution of the works. By order,

ALFRED G. BLAKE, Clerk to the Guardians.

No. 23, George-street, Croydon, August 25, 1864.

TO BUILDERS.—Persons desirous of sending in TENDERS for the RESTORATION of CHAPEL HILL, near Tintern, can see the plans and specification at the Churchwardens', at Tintern, on and after 31st inst. Sealed Tenders to be sent to the Rev. GEORGE JONES, Tintern, near Chepstow, by SIX o'clock on the Evening of SEPTEMBER 20th. No Tender necessarily accepted JOHN PRICHARD, Diocesan Architect.

Llandaff, August 24th, 1864.

BLACKFRIARS BRIDGE. — TENDERS will be received for the OLD STONE of this Bridge, consisting of Portland, granite in blocks and in steps, Bosch, Portland, and rough rubble. Also for the handsome columns, with moulded bases and carved caps.—Apply to Messrs. THORN & CO. Contractors, on the Bridge

LONDON and NORTH-WESTERN RAILWAY.—To CONTRACTORS and BUILDERS.—The Directors are desirous of receiving TENDERS for the ERECTION of a BRIDGE over the Canal at Wolverton Station, in the County of Bucks; also for the Erection of Carriage Sheds at the same Station.—Parties desirous of Tendering may see the drawings and obtain a statement of the quantity on upon application to Mr. WILLIAM BAKER, Engineer's Office, Euston Station, on and after WEDNESDAY, SEPTEMBER the 7th, between the hours of TEN and FOUR o'clock. Tenders, addressed to the Secretary, at Euston Station, to be sent in on or before WEDNESDAY, SEPTEMBER the 14th, at FOUR o'clock p.m. The Directors do not bind themselves to accept the lowest Tender.—By order. CHAS. E. STEWART, Secretary.

Euston Station, August, 1864.

TO STONEMASONS. — BRIGG LOCAL BOARD.—Persons desirous of CONTRACTING with the Local Board for PROVIDING the requisite MATERIALS and LABOUR in LAYING the several FOOTPATHS in the town of Glamford Brigg with tooled Yorkshire flag stones, kerbs, and gutters, and executing other works, may obtain particulars on applying to Mr HENRY GODDARD, Surveyor, Lincoln; or at my Office in Brigg, and must deliver a priced schedule to me on or before the twelfth day of SEPTEMBER next. The Board do not pledge themselves to accept the lowest or any Tender.—By order,

Brigg, August 22nd, 1864. ROBERT HETT, Clerk to the Board.

TO BUILDERS. — Persons desirous of giving TENDERS for the ERECTION of new CONGREGATIONAL CHAPEL, Week street, Maidstone, Kent, may inspect the drawings and specification, and obtain all particulars, at the Offices of Messrs W. G. HABERSHON & PITE, Architects, 38, Bloomsbury-square, W.C.

BOARD of WORKS for the LIMEHOUSE DISTRICT.—CONTRACT for WATERING, SCAVENGING, and the REMOVAL of DUST.—Notice is hereby given, that the Works Committee will meet on MONDAY, the 12th day of SEPTEMBER 1864, to receive TENDERS for WATERING the ROADS and STREETS, for SCAVENGERS' WORK, and for the REMOVAL of DUST in the abovenamed district. The whole of the above works to be let together. The Contract to be in two amounts, viz. one for Limehouse and Ratcliff, and one for Shadwell and Wapping; further particulars may be known, and printed forms and forms of Tender may be obtained, by application at the Office of the Board, in White Horse-street, Commercial road east, on and after the 5th day of SEPTEMBER, 1864, between the hours of TEN and FOUR o'clock, upon payment of the sum of 10s. which will be returned to the party tendering when Tenders are not accepted. Tenders, sealed up and endorsed "Tender for Watering, Scavenging, and the Removal of Dust," must be delivered at the said Office, not later than TWELVE o'clock on MONDAY, the 12th day of SEPTEMBER, 1864, and no Tender will be received unless accompanied by a 20l. Bank of England note, as evidence that the same is bond fide. The Board do not bind themselves to accept the lowest or any Tender. The security of two responsible persons will be required, and the Contractors will have to pay the costs of the contracts. No Tender will be received after the time specified, nor unless strictly in accordance with the specification and conditions. By order,

August 22, 1864. THOS. W. RATCLIFF, Clerk of the Board.

THE WEDGWOOD INSTITUTE. — To BUILDERS. — The Committee invite TENDERS for the EXECUTION of the several WORKS shown in the Basement plans and specification of which may be inspected at the Town Hall, Burslem, on THURSDAY and FRIDAY next, the 9th and 10th of SEPTEMBER; after which particulars may be obtained at the Office of the Architect, Mr. G. B. NICHOLS, Heath Chambers, West Bromwich. The Tender is to be sealed, and addressed to the Chairman of the Institute Committee, Town Hall, Burslem, "Tender for Building," and to be delivered not later than WEDNESDAY, the 14 h inst. The Committee is not pledged to accept the lowest nor any Tender.

Burslem, 1st Sept 1864. W. WOODALL, Hon. Sec

TO BUILDERS and CONTRACTORS, and to GAS FITTERS.—PARISH of ST. PANCRAS, MIDDLESEX.—Notice is hereby given that the Directors of the Poor of this Parish will meet at the Vestry Hall, King's road, Pancras-road, on TUESDAY, the 20th day of SEPTEMBER next, at TWO o'clock in the afternoon, to receive and consider TENDERS from persons willing to CONTRACT for GENERAL REPAIRS of the Workhouse, and also for GAS-FITTERS' WORK, agreeably to the terms of specifications to be seen at the Vestry Offices as above, where further particulars, and form of Tender, may be obtained, and of the Clerk of Works for specification for general repairs. Surety will be required for the due performance of the contract. No Tender will be received or accepted unless made out on one of the printed forms. Tenders must be delivered, sealed and under cover, before TWO o'clock in the afternoon on the said 20th day of SEPTEMBER, marked "Tenders for ....." and the persons Tendering, or their agents, are required to be in attendance at the said Offices at THREE o'clock in the afternoon of the above mentioned day. The Directors do not bind themselves to accept the lowest or any Tender, nor will any travelling or other expenses be allowed.—By order of the Directors of the Poor,

FRANCIS PLAW, Clerk.

Vestry Offices, Pancras road, N.W. August 26, 1864.

TO CONTRACTORS and BUILDERS.—RESTORATION of the PARISH CHURCH of S. MARY, ARNOLD, near Nottingham.—TENDERS are required for the WORKS to be done in the RESTORATION and partial REBUILDING of the above CHURCH. THE FURNISHING OF BED-ROOMS.

HEAL & SON have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed-room Furniture than usually is exhibited, so that to judge properly of the style and effect of the different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large and additional Warerooms, by which they are enabled not only to extend their show of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture, over all what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete suites of Bed room Furniture in the different styles.

Japanned Deal Goods may be seen in complete suites of five or six different colours, some of them light and ornamental, and others of a plainer description. Suites of Stained Deal Gothic Furniture, Polished Deal, Oak, and Walnut, are also set apart in separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.

Bed Furniture are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.

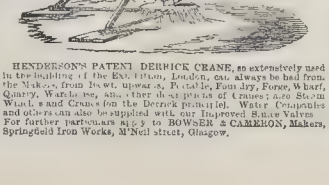
A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.

The Stock of Mahogany Goods for the better Bed rooms, and Japanned Goods for plain and Servants' use, is very greatly increased. The entire stock is arranged in three classes, as good as it is best that can possibly be desired.

Every attention is paid to the manufacture of the Cabinet work, and they have just erected large Workshops upon the premises for this purpose, that the manufacture may be under their own immediate care.

Their Bedding trade receives their constant and personal attention, every article being made on the premises.

They part especially call attention to their Patent Spring Mattress, the same as Exhibited at Paris. It is portable, durable, and elastic, and is certainly more than the old Spring Mattress.



HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free by Post.—196, 197, 198, Tottenham-court-road, London.

This Range, also
CUNDY'S PATENT BRICK OVEN SEMI-CLOSE RANGE,
and
PATENT COTTAGER'S KITCHENER;
Also CUNDY'S Patent Original FIRE-BRICK Warm-Air Ventilating STOVE,
suitable for CHURCHES, HALLS, SCHOOLS, and STAIRCASES,
can be seen in operation daily at the
SHOW-ROOMS of the MANUFACTURER,
Wm. ADDIS, Wholesale and Retail Ironmonger, Stove Grate and Range Manufacturer,
6, 7, & 15, LEICESTER STREET, LEICESTER SQUARE, LONDON.
A Prospectus, with full Description and Price of the above, will be sent per Post on application.

MANTEL PIECES, ENGLISH AND FOREIGN,
IN EVERY VARIETY OF DESIGN AND COST,
Have been added to their LARGE and EXCELLENT ASSORTMENT of FINE FINISHED STOVES, FENDERS, &c. in the NEW SHOW ROOMS of the
GENERAL IRON FOUNDRY COMPANY (LIMITED),
At No. 43, UPPER THAMES-STREET, LONDON.
By an arrangement with Mr. WILLIAM POTTS, of Birmingham, the Company have the exclusive Right of Sale of his ART MANTELS in the London District. These Works are of the HIGHEST EXCELLENCE in DESIGN and FINISH, very beautiful and durable. They also beg to call special attention to the beautiful and varied productions in ART BRONZES and METAL WORK, adapted for ARCHITECTURAL and CABINET DECORATION, MURAL MONUMENTS, &c. now on view in their Rooms. Also to the following Articles of their Manufacture, viz.
PATENT WROUGHT IRON WINDOWS,
Strong, light, durable, easily fixed, cheap, and free from risk of breakage.
BILLING'S PATENT CHIMNEY THROATS AND AIR APPARATUS,
Most effective for the Cure of Smoky Chimneys.
FIRST-CLASS COOKING APPARATUS
For Club Houses, Hotels, Restaurants, &c.

HOBBS, HART, & CO.'S
MACHINE-MADE LOCKS AND STREET-DOOR LATCHES.

These Locks are recommended for all purposes requiring good security combined with economy of price and durability of wear, as by means of machinery a faultless accuracy is arrived at, which by hand labour would be impossible except at a greatly increased cost.

Architects and Engineers are requested to note that the security of these Locks consists in a series of Levers, that have to be raised to unequal positions by the bits of the key before the bolt can pass. These will bear comparison with those at treble their cost.

These Locks are made with from Two to Five Levers, and can also be made in suits to differ with Master Keys to pass.

The retail prices of Locks for Cabinet purposes are from 2s. to 4s. each; for Room Doors, 4s. to 9s. 6d. each; Street Door Latches, 7s. 6d. to 18s. each.

This Illustration represents the Two-bolt Four-lever Mortise, with Hobbs & Co.'s Patent Follower, price 8s.

HOBBS, HART, & CO.'S PATENT PROTECTOR LOCKS.

300 Guineas were offered in the late Exhibition (*the only Lock for which a Premium was offered to pick*) to any one who could pick these Locks in thirty days. Their speciality consists in their combining the two essentials of security, viz.—Protection against picking by means of their Patent Moveable Lever Protector, and Protection against Illicit Tampering with the Key by means of their Patent Nozzle Protector.

These all-important principles are the special and peculiar features of HOBBS, HART, & CO.'S Patent Locks. These Locks vary in price from 10s. to 50s. each, with Solid Keys. For prices, with Changeable Keys, see 16-paged Illustrated List of Locks, Iron Doors, Safes, &c. which can be had on application.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible,—advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

"By Royal Letters Patent."

"Indicator" Dial, 2½ in. diameter.

ELECTRIC BELLS FOR DOMESTIC USE.

BREGUET'S PATENT INDICATOR SYSTEM, with a Dial which shows when the Bell is ringing, the same as in use at the Grand Hotel, Boulevard des Capucines, Jockey Club, &c. Paris.

The superiority of Electric Bells is already settled in America and in France. For all modern works at Paris they have as effectually superseded the old crank and pull plan as, for travelling, the railway has superseded the antiquated stage-coach.

ADAMS & SON have much pleasure in stating that they have made arrangements with Messrs. Breguet, of Paris, to become their sole Agents for the sale and fixing of their Patented Apparatus upon the "indicator system," which has great advantages over all others, and is especially adapted for hotels, public buildings, and other large establishments. The details of this ingenious instrument, together with a description of the various apparatus in use for Electric Bells, may be had upon application, or by post.

WILLIAM S. ADAMS & SON,
Ironmongers by appointment to the Queen and his Royal Highness the Prince of Wales, and also to the principal London Clubs,
Engineers and Manufacturers, 57, Haymarket, and 14, Norris-street, S.W.
Works—Marlborough-row, Marshall-street, W.

FIRE-PROOF CONSTRUCTION.—

FOX & BARRETT'S PATENT

This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY with great rapidity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,

MR. BARRETT,
12, YORK BUILDINGS, ADELPHI

ROBERT MACLAREN & CO.

DESACHY'S FIBROUS PLASTER.

GEORGE JACKSON & SONS,

HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN

DESACHY'S FIBROUS PLASTER,

Beg to call the attention of Architects to its Capabilities.

It is adapted for the speedy and economical production of any coffered or circular work, waggon-headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), fluted and plain columns, panelled dados, all kinds of draper, &c., for the linings of walls and ceilings, and for all purposes of ornamental plaster.

The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made; it has been used (under the direction of Owen Jones, &c.) for the ceiling of St. James's Hall; at Messrs. Osler's, Oxford street; Mr Hancock's, New Bond-street; the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works.

SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.

DESIGNS MADE FOR ANY WORKS.

MUSGRAVE'S PATENT STABLE AND HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES. MUSGRAVE'S PATENT IRON COW-STALLS AND PIGGERIES.

Architects who have not seen these Fittings are requested to write for Engravings, as they are unlike those of any other maker, and were admitted to excel all the work of the Trade in the Exhibition. They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting up several very large establishments under the sections of London Architects, noted for adopting only what is the best of its kind. Particulars of these, as well as of MUSGRAVE'S PATENT SLOW-COMBUSTION STOVE, will be forwarded on application to

MUSGRAVE, BROTHERS, ANN STREET IRON WORKS, BELFAST.

THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees, England and Canada,

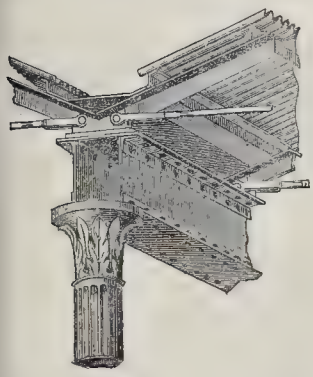
A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength, and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT SCOTT, 20, Spring Gardens, London."

BROWN & GREEN'S
PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.



These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and when fitted with Bath and Steam Apparatus, &c they form the most complete appointment for good establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

72—74, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept. 6, 1862.

IMPROVED SAW-BENCH,

for Sawing, Tonguing, Grooving, Rebating, Boring, and Cross-cutting. Manufacturers of Sawing, Planing, Moulding, and Wood-working Machinery of every description, suitable for Builders, Contractors, &c. Steam Engines and Boilers, Shafting, Gearing, &c.

Full sets of Wood-working Machinery to be seen in operation daily at the Works, Rochdale

IRON RAILINGS, for enclosing
TOMBS AND GRAVES.

COMMUNION RAILINGS, SCREENS, GATES, &c.

Illustrated Price Catalogue, of numerous Designs, in various styles (free), on application to

COTTAM & CO. IRON WORKS,

2, WINSLEY STREET, OXFORD STREET,

LONDON, W.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.

PICTOR & SONS, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

THE MESSRS. FREEMAN AND CHEESEWRING GRANITE COMPANY (LIMITED).

OFFICES: — 13, PRINCESS SQUARE, PLYMOUTH.

Estimates for Granite, Polished, Dressed, or Scappled, will be forwarded on application to the Secretary, 13, Princess-square, Plymouth; Quarries at Penryn, Penzance, and Cheesewring; Steam Polishing Works at Penryn and Cheesewring.

LONDON ORDERS RECEIVED AT 27, MILLBANK STREET, AND 93, CANNON STREET.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

NOTICE TO ARCHITECTS AND THE TRADE.

J. DEFRIES & SONS,

GAS ENGINEERS AND MANUFACTUERS OF

CRYSTAL, BRONZED, AND ORMOLU CHANDELIERS, IMPROVED CRYSTAL STAR AND SUN LIGHTS,

FOR LIGHTING AND VENTILATING PUBLIC AND PRIVATE BUILDINGS.

SPECIAL DESIGNS PREPARED in perfect ACCORDANCE WITH Architectural Arrangements.

Estimates furnished FOR THE LIGHTING and Fitting up of Theatres, Music-halls, and Public or Private Buildings with Gas, &c.

WORKS, LONDON and BIRMINGHAM.
MANUFACTORY and CITY SHOW ROOMS, 147, HOUNDSDITCH.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whichever is sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS. Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gal ons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

THE LAND SECURITIES COMPANY

(Limited)
Capital, 2,000,000l.

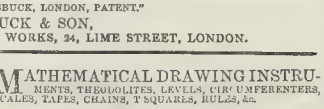
DIRECTORS.

The Right Hon. the Lord Navy, M.P. President.
The Directors of the International Financial Society (Limited), acting as a Finance Committee.

John Ennis, esq. M.P.	Henry Farquhar, esq.
Sir James Ferguson, Bart. M.P.	Sir John Gray.
Col. Fulke Southwell Greville, M.P.	Chandos Wren Hoskyns, esq.
Sir John Charles Dalrymple Hay, Bart. M.P.	John Horatio Lloyd, esq.
Sir Laurence Peel, Bart. M.P.	Hon. William Napier.
Sir Henry Strakey, Bart. M.P.	Hon. Rupert Pelre
William Dargan, esq.	Sir Charles Rich, Bart.
	Granville Richard Ryder, esq.
	Philip Twells, esq.

OFFICES.—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, Office of International Financial Society, No. 66, Threadneedle street, E.C.

The Company will make advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security:—



1st. Of landed estates, first class house-property, and real property of all descriptions and tenures, and of all estates and interest therein.

2nd. Of rates, dues, assessments, and impositions of all descriptions, raised or imposed by or under the authority of any Act of Parliament, public or private, Royal Charter, Commissions of Sewers, Drainage, or other sufficient legal authority on the owners or occupiers of land.

3rd. Of charges and securities of all descriptions upon or affecting landed estate, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private.

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32, Charing-cross, London, S.W.

MATHEMATICAL DRAWING INSTRUMENTS, THEODOLITES, LEVELS, CIRCUMFERENTERS, SCALES, TAPES, CHAINS, T SQUARES, RULES, &c.

JOHN ARCHBUTT & SONS,
20, WESTMINSTER BRIDGE ROAD, LAMBETH,
Near Astley's Theatre.

Respectfully inform the public that their Illustrated Price list will be forwarded free on application. The prices will be found remarkably low. Every article warranted. Second-hand Instruments of all kinds, by the best makers, always in stock.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.

IMPERISHABLE TESSELATED PAVEMENTS,

combining a highly decorative and economica substitute for ordinary floors of their perishable coverings. MAW & CO'S Pattern-book, designed by M. Digby Wyatt, esq. together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthall Works, Broseley, Salop.

May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.

London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES,

PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Macclesfield-street North, City-road Basin, N. 2ndly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and 3rdly, that the "Reports of the Juries," page 381, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION

MAGNUS'S ENAMELLED SLATE

obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.

Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.

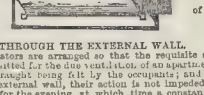
Chimney-pieces, Billiard tables, Table-tops, Baths, Wall linings, &c, a New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 39 and 40, Upper Belgrave-place, Pimlico, S.W.

MEDIÆVAL PAPERHANGINGS,

from the Thirteenth to the Sixteenth Centuries. Designed by G. T. ROBINSON, F.R.I.B.A. Manufactured by WM. WOOLLAMS & CO 110, HIGH STREET, near Manchester-square, London, W. May be obtained of the principal Decorators.

Extracts from notices in the undermentioned publications:—

"Conventionalized patterns, often displaying great beauty of form, characterize the examples sent to us. With a few exceptions, the colouring of the specimens is commendable, in many it is worthy of the highest praise."—*Athenæum.*



"The designs are exceedingly elegant, and the colours good and well arranged. Some of the patterns are of strictly ecclesiastical character, suitable for mission churches and oratories, or they may be used as accessories in church decoration."—*Church Builder.*

"The majority of the patterns are exceedingly satisfactory, and not expensive."—*Builder.*

"These designs are infinitely varied, yet always consistent and effective; the colouring is pre eminently good, both in the selection of tints, and in harmonious combinations, and the quality of the paper is of the highest order."—*Art Journal.*

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator

for admission of Pure Air

THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 188 (late 117 and 118), Union-street, Borough, London.

INDIA-RUBBER MILL BANDS,

WASHERS for STEAM JOINTS, HOSE PIPES, and FLEXIBLE TUBING.

A STOCK OF THE ABOVE ALWAYS ON HAND.

The Builder.

VOL. XXII.—No. 1126.

The Pre-Historic incised Rock Symbols in Northumberland.

It is a rare event in the history of the world to come upon the tracks of a people concerning whose identity we cannot be certain, and who have left imprinted upon rocks a vast number of symbols the meaning of which we cannot decipher. But it has fallen to our day to make this rare discovery. The inscriptions recently uncovered on the Northumbrian rocks, on the wild hilly moors, must have been made 2,000 years ago, and have been lost to recognition for centuries. It would therefore have been singular if the event had not been viewed with interest. But it is only fair that those who have borne the heat and burden of the day in explorations and accumulations of facts should be accorded the first place, in proper quarters, amongst those who may hereafter take up the subject. This place should be assigned to the discoverers hereinafter mentioned and to the first historian of the stones, Mr. George Tate. Nor must we omit reference to the remarkable dissertation on the subject in our own pages, the first published theory, by Mr. J. E. Dove.*

One of the discoveries most tending to the unravelling of the mystery of the pre-historic sculptured stones scattered on the Northumbrian moors was made by the Rev. W. Greenwell, of Durham, when he found a similar series of concentric circles upon the covering of a sepulchral cist at Ford West-field, about a mile westward of Routing Linn. This discovery gave a clue to the meaning of certain artificial round hollows found, subsequently, upon another cist in the same neighbourhood. But it would be premature to point to this circumstance as conclusive. This information, as well as all that has been hitherto obtained bearing on the subject, has received minute attention at the hands of one of the secretaries of the Berwickshire Naturalists' Club, Mr. Tate, abovementioned, who, on the 25th ult., laid before the members of that body a report that embodied the labour of years. Mr. Tate announced that as many as fifty of these stones had been found in Northumberland; but not one in the district to which they are popularly assigned,—the Cheviot side. The Cheviot range is composed of porphyry, a substance that is untractable under stone tools, which circumstance at once accounts for their absence in that locality. These curious devices are found on exposed beds on different platforms of the thick sandstone which is near the base of the mountain limestone, and forms the substratum of the high moor lands of Northumberland. They occur on the upper surface of the cliff near Routing Linn, about six miles north of Wooler, at Harelaw, Horton, and Doddington moors, at Cuddy's Cove, at Whitsun Bank, Chatton Law, Old Bewick, Beanly Moor, Cartington Cove, near Rothbury, and some others, though not *in situ* at Stamfordham and Jedburgh.

The first was observed about forty years ago by Mr. J. C. Langlands, of Old Bewick. On a block of sandstone on the top of Old Bewick-hill, close to an ancient British camp, he perceived several eccentric configurations which must have taken both time and labour to effect. But it was not till some years afterwards, when another stone was found in the same locality, incised with similar characters, that it occurred to him to connect them with the ancient people who once inhabited the grass-grown camp close by. This association was dwelt upon by the local antiquaries, as likely to be fraught with meaning; but the facts were of so limited a nature that conjectures alone could be made. In 1852 the Rev. Wm. Greenwell found a third example of this old-world caligraphy. This consisted of about sixty figures incised on the grey scalp of a rock rising 10 feet from the ground, on the edge of a wild moorland, near to another camp about twelve miles to the north-west of Old Bewick, and close to the fall of water known as the Routing Linn, on the estate of the Earl of Tankerville and the Marchioness of Waterford. In the summer of that year this gentleman, with Mr. Tate, revisited this rock, and removed some of the turf which accumulations of heathery peat had suffered to bury parts of the sides, and they then exposed further figures, which appeared sharp and distinct, owing to the protection the peat had afforded them from the weather. They measured it, and found that it was 60 ft. in length by 40 feet in its broadest point, and counted fifty-five figures on its surface, and five on its southern face. After this the Rev. Wm. Proctor, Mr. W. Proctor, jun., Mr. Wm. Wightman, and Mr. Charles Rea discovered further examples of the same unknown symbols in different parts of North Northumberland and the eastern border. They are, generally, in the neighbourhood of pre-historic oppida; and in two instances have been, as related, found on a smaller scale, incised upon the coverings of ancient British cists. Mr. Tate and some of these gentlemen have spent days on the moors and hills with only negative results; the facts gleaned therefore, must be valued accordingly. Of the fifty stones now found no two are alike; yet there is a resemblance in all the sculptures that proclaim them to be of the same origin.

Mr. Tate finds that the most common form is composed of a series of incomplete concentric circles around a central round hollow, from which proceeds a radial gutter or groove through the series of circles (1).

There is a variation in the number of concentric circles in this typical form: sometimes there is only one circle; in other examples there are four; and in one case there are seven. The circles are seldom quite true, but are bulged out in breadth in the proportion of 13 and 14 to 12; others are pear-shaped. The radial groove is generally straight; but it is sometimes curved and wavy, and extended beyond the outer circle. A second form (2) consists of concentric circles around a hollow, with the groove passing through the entire diameter. This is not common. A third (3) form consists of incomplete concentric circles around a hollow, but having no groove. These circles sometimes end in hollows. A fourth (4) arrangement consists of concentric circles around a hollow, having a groove extending from the outer circle. A fifth form (5) noticed shows two grooves proceeding parallel from the innermost of the series of incomplete concentric circles round a central hollow. A sixth figure (6) differs from this in starting one of these two grooves from the central hollow, and a second from the outer circle. A seventh variety (7) is of an arched form. Here three semicircular concentric circles are thrown over a hollow, from which there is a straight groove. An eighth figure (8) is of a horse-shoe form, with a hollow in the centre.

Occasionally a circle is found; sometimes a circle and a series of circles around a hollow; and again, conjecture is puzzled with the occurrence of a series of concentric ovals. These various forms are frequently fantastically grouped together, sometimes branching out like conventional flowers from one stem. The hollows or pits occur without enclosing circles, in some instances, grouped in various numbers up to ten, as well as singly. One series of concentric circles sometimes merges into another; and, again the radial groove sometimes traverses two and three circles capriciously terminating in the central hollow of the furthermost one, or passing the outer boundary and proceeding to an independent hollow beyond it. When the term circle is used it must be understood that the figures are but approximations to that form, being in some instances bulged out or bent in, and when arranged concentrically they are not uniformly equi-distant. Some incisions are about half an inch deep, others about a quarter, others mere marks. The hollows, however, are deeper, some of them measuring 1½ in. in depth. The marks of blunt tools are visible on such figures as have been but recently denuded of their coverings of peat, and these are seen to be sometimes broader and blunter than at others. The rocks are left as nature left them,—their surfaces irregular, their outlines rugged. Some stones have but one figure; one stone has sixty; and all classification is impeded by equally broad marked distinctions notwithstanding a certain character in common that identifies them as the work of the same race.

An inscription on a stone at Dod-law differs so considerably from the common forms, that it requires especial mention. In 1858 the wife of a shepherd, while amusing her child, saw on a corner of this stone a mark, which induced her to examine it further. It was coated with turf. This she removed, and found a group of extraordinary configurations clearly marked. In the first we will notice a groove leads to a group of fourteen hollows, through another hollow, which is placed in the space left as an entrance through three rows of grooves following the outline of a rude square. At one angle of the square, outside the external groove, are three more hollows, and slightly removed from these two more. This singular sculpture so nearly resembles the plan of a camp, that it is difficult to imagine it can be meant for anything else. The hollows appear to represent the sites of Celtic huts, and the incisions surrounding them interpret themselves into three tiers of ramparts, with which Celtic camps are frequently fortified. On the same stone there is another square, consisting of a single rampart-like outline, from which three long grooves or roads depart. One of these roads traverses a two-fold circle, passes through the pit in the centre, and the entrance left at one place, and terminates in a second pit, about a foot farther off, facing the same opening. Another road, after it has entered the square

* See pp. 487, 532, *ante*.

inclosure, forks into two branches, and runs into two hollows. The third is a continuation of one side of the square. Scattered over the stone are eight fragments of circles, each containing its central little pit; and besides those we have mentioned there are eleven isolated hollows in different places. Mr. Greenwell was one of the first to adopt the view that these figures represented plans of camps. Mr. Tate observes that this opinion was echoed by the late Dr. Johnson, of Berwick, and adopted by Sir Gardner Wilkinson and Mr. Albert Way. But Mr. Greenwell was induced to abandon this view when he found the same kind of sculpture upon the lid of cists; and Sir Gardner Wilkinson, in 1860, repudiated his first formed idea.

When we turn to the more common forms, the supposition that they represent plans of camps, or even sites of the camps, over a district of country, is seen to be untenable. Of the sixty figures on the Routing Linn stone none could be thus viewed. These, with their feathery-like branches dotted with dark centres like the plumes in a peacock's tail, might be taken for symbols of vegetable life. One of its plant-like forms consists of a main stem, from which grooves branch out and terminate in circles, having a central hollow, whence proceeds a groove with nine lines radiating out of the outer circle, like the fringed lips of a zoophite. The directions of the outer of these rays were observed to be S. 20, E. to N. 20, W. and S. 15, W. to N. 15 E.; that of the central one, S. by E. to N. by W. The figures on this stone are pointed out as more gracefully executed than those on any other. The size of them varies from 3 in. in diameter to 2 ft. by 9 in. The peat removed from the covered portions of the stone was found to be 9 in. deeper,—an unmistakeable indication of the long period that must have elapsed since time began silently to bury them. The camp with which these symbols are associated consists of an inclosure surrounded by four strong rampiers or ditches; adjoining this is a second area, inclosed by a supplemental rampier, and in this is the inscribed rock. About 300 ft. northwards rises a barrow. Can we doubt that it covers the remains of a personage whom the survivors delighted to honour, and to whom the writings on the rock were as a graven page?

Half a mile north by west from Routing Linn the rock crops out in a high ridge, and more inscriptions present themselves; and near them are more barrows. A few have been opened and found to contain skeletons which had not been burnt, and urns that contained burnt bones, rude flint arrow-heads, and a bone that had been acted on by fire.

About two miles eastward of this locality, or half a mile northwards of Doddington, Miss Proctor discovered in 1859 a remarkable specimen in a field known as the High Chesters. The turf covering it was 12 in. thick, and had been the means of preserving the distinctness of the figures. It protrudes from the hill-side, sloping in every direction, a huge mass measuring 9 ft. by 7 ft. The surface is covered with the characteristic incisions grouped in various combinations by the depressed lines or grooves observable on other examples. Among some thirty figures two hooked-shaped grooves proceeding from one side of a circle inclosing a hollow are new forms. The blunt tool-marks are distinctly visible in the shallow grooves of this piece of early workmanship.

The stones found by Mr. Rea are also in the neighbourhood of Doddington, and lie about a mile northwards of Ringses Camp. They form part of Harelaw Craggs, and are inscribed with five groups of figures of the common type. Turf had grown over these. Mr. William Proctor found several inscriptions about a mile southwards of this cragg in the present year. They occur on an outbreak of rock on the Horton grounds, and, like all the others found, had a covering of turf over them. A curious variation is presented in one of the figures here observed. It consists of four concentric circles, in which are inclosed six hollows, and from the second circle of which issue two parallel curving grooves. The Ringses Camp in the neighbourhood of these inscriptions is of a circular shape, having three rampiers of earth and stone thrown up around it; and within it are the foundations of huts of a circular form. As in other camps, an additional area is inclosed by a semi-circular rampier.

Dod-law furnishes a few more inscriptions on the outbreak of rocks occurring on the escarpment of the hill. Eighteen feet northwards of the great camp there is a figure consisting of three concentric circles round a hollow. The outermost circle curves outwards, and a groove departs from the second circle to branch off into another groove at an angle. Seven groups of inscriptions were found on Gled-law, a rocky platform breaking out of the south-west escarpment of Dod-law, by Mr. Wm. Proctor, jun.

A mass of red sandstone projects from this same escarpment, in which is contained a small cavern called "Cuddy's Cove." The scalp of this projection possesses four figures, and Mr. Tate discovered on the western face of it several additional inscriptions differing from the common types. One of them resembles a cross, and another looks like the letter M, in Mediæval character. Of these Mr. Tate remarks,—"I believe them to be archaic, but it may be doubted whether they are of the same age as the figures on the top of the rock." It will be thus seen that the Harelaw, Horton, and Doddington districts are particularly rich in these unintelligible records. Mr. Tate considers it an important fact not to be lost sight of, that other remains of the ancient British people are also numerous in this district. There are remains of five camps in it. Near one of the camps, on the Horton grounds, are the remains of a still more rare relic, a circle of upright stones which, when complete, must have measured 100 ft. in circumference. Five huge monoliths still mark its confines; but only two of them are standing. Barrows are also frequent.

Mr. Henry McLauchlan discovered some inscribed stones at Chatton-law. This is a hill rising 603 feet above the sea-level, with a flat area on the top, at the western extremity of which is a small circular camp defended by three rampiers. One of the inscriptions mentioned, consisting of six figures of the common type, occurs on a stone within this camp. Outside the camp, about 200 yards to the east of it, on a large area of fine-grained sandstone, further figures were traceable. They are remarkable for their great size and geometrical forms. "One figure, 36 in. in diameter, is composed of seven concentric rings with a peculiar curved elevation or crown at the top. From its central hollow issues a long wavy groove, which had linked together other forms now obliterated; one, however, still remains of four concentric circles attached to the principal figures, and also joined to the grooves by a branch. Those who fancy that the figures symbolize the progression of life, might imagine the smaller circles to be buds or germinations from the larger, similarly as life among zoophites is generated by buds issuing from the old parents." The value of excessive minuteness in the descriptions of these sculptures is apparent when we add that of the thirteen figures traceable on these stones in 1859, when sketched, several have since been obliterated by the weather. Standing on this spot one may count six Ancient British camps within a radius of 2 miles, and a great number of barrows. And a bronze leaf-shaped sword was found in the same locality.

Two of the Bewick stones are also within a camp,—one close to the outer rampart and eastern entrance, the other 20 yards northwards of this. The incision on the former has a resemblance to the imprint of a horse's foot; the latter has two figures, one exhibiting the spiral treatment found on other inscribed stones in different parts of the British islands, but of which this is the solitary Northumbrian example. Mr. Tate, accompanied by Mr. Langlands and Mr. Robert Embleton, the able naturalist and secretary of the club, tested the truth of the conjecture that these inscribed stones marked places of sepulture, by digging beneath another block lying about 300 ft. from the camp. In his own words, "The stone was turned over, and the diggings were carried down to a depth beneath the natural and undisturbed soil; but no evidences of any interment could be seen, nor were any relics found." Standing at sunset on this hill-top, with a sky-line of purple heather contrasting with the gorgeous tints in the heavens, a soft golden light falls on the stones, and figures are visible where none can be seen at less favourable opportunities.

We quote Mr. Tate again to show how far Mr. Dove's interpretation of these symbols, elaborated in his communications to us, agrees with his:—"Imagination could revel amid these complicated figures. Life-budding might be seen,—the passage of a life to a higher life, the transmigration of souls, central suns, orbits of planets, attendant satellites, and, perhaps, too, divinity might be thought symbolised by the central hollow, as penetrating through the circles and beyond in all the realms of matter and spirit."

Another variety of mark occurs on these stones, namely, a row of hollows passing horizontally along its south and east sides, each round hollow being from 2½ in. to 3 in. in diameter, and ½ in. in depth, and about 12 in. distant from each other. Mr. Tate thinks it likely that the whole stone was once girded with them, although twenty-seven only are now visible. In the Pre-historic annals of Scotland, mention of similar indentations is made as occurring on the "Witches' Stone" at Bennington Mains, near Rath, in Mid-Lothian, which forms the cap stone of a cromlech. Others occur on a cromlech in Guernsey (*Arch. Journal*). The camp with which these blocks are associated consists of two distinct semicircular camps, each defended by two strong rampiers, and, around these, two more stout rampiers binding the two together. On the same hill, on its northern slope, are the remains of another ancient British village, in which the chief fortlet measures about 120 ft. in diameter, and the smaller huts from 9 ft. to 15 ft. Burying-places are also at hand; and various fragments of ancient pottery have been found around, including a bowl of coarse clay hid in a fissure of rock.

The facts accumulated show that all these inscribed stones are more or less intimately associated with ancient British remains. "Two of them formed the covers of cists; two more are within a few yards of barrows, beneath which are similar sepulchral chambers; four of them are within ancient British camps; eight of them are not more distant from such camp than 100 yards; most of the others are less distant than half a mile, and none further away than a mile. Their relation to the camps, forts, and hut circles, or dwellings of the ancient British race, is more apparent than to their sepulchres." But the additional facts amassed have not had the effect of altering the view first taken by Mr. Tate as to their purpose. An examination of the Egyptian hieroglyphics in the British Museum showed him the frequent use of a circle around a central dot, and the semicircle, with the addition of a short curve from the circumference; but yielded no instance of a circle around the hollow, along with the *radial groove*. Scottish symbols in Argyleshire present this feature; and, singularly, the Irish inscriptions give this significant groove. Lord Dunraven sent Mr. Tate sketches of two stones of marked relationship with those of Northumberland. Professor Simpson also supplied illustrations of similar inscriptions in Devonshire and Derbyshire, and at Lochgilphead, in Scotland. This goes to prove that the race to whom these sculptures belonged, either spread over the whole of the British Islands, in a tide of immigration, or peopled it at one and the same time. But the question whether this race was that which peopled Britain at the time of the invasion of Julius Cæsar, or a previous race of lower powers, whom the former had exterminated or driven forth, is yet unsolved. Mr. Tate ascribes the difficulty of settling this point to recent investigation into the ethnology of the people whose remains have been disinterred from the cists found in Northumberland. Some fourteen skulls obtained in the province of the Ottadini, were all found to be of the broad short form called Brachycephalic, which conformation does not correspond with that of modern Celts. The Brachycephalic type is that which ethnologists attribute to the men of the stone age, whose modern representatives now inhabit Lapland. This, taken in connexion with the recent discoveries in France, leads therefore to the inference that the tribes roaming over Europe in prehistoric times were the ancestors of the Laps, whom the tide of advancing civilization from the Aryan stock compelled to advance northwards; and that these incised stones are relics of the periods in which they sojourned in Great Britain ere they were driven still further north. On this point Mr. Tate observes, "There is a strong tendency at present to lengthen out the age of even old antiquities: against this we must guard, especially when it is connected with refined theorising, which would distort facts to suit artificial classification. Were we to take ethnology alone for our guide, we, perhaps, might refer the antiquities we have described to this old pre-Celtic race; but the basis is too narrow for such a conclusion: we must gather additional information from other lines of research. Language gives important evidence, for the old names of hills, rivers, and other prominent natural objects, names given by the aboriginal inhabitants, which oftentimes survive the revolutions of race, are Celtic." The discrepancy in the evidence of the skulls he attri-

butes to a gradual change, which admixture with other races, through the course of centuries, may have induced. If we assign these important remains to the remote and scanty tribes that may have preceded the Celtic race, he asks where are we to look for any traces of a people whom Cæsar found a formidable enemy?

The view taken by Mr. Tate in 1853, and maintained by him throughout his accession of information, is, that the sculptures are Celtic, and are symbolical figures representing religious thoughts. The Druids recognised a superior being ruling the world, the immortality of the soul and its passage, at death, into other bodies. With this was mixed up much superstition. Pliny made mention of the astonishing extent to which necromantic rites were carried by the British, and affirmed that they were capable of instructing even the Persians in these arts. They must have had sites for their incantations, and, perhaps, diagrams for their expositions. Altars, too, must have been indispensable. And that rocks were considered sacred, we have evidence in one of the edicts of Canute, who, in a list of forbidden objects of worship, includes them with rivers, trees, the sun, moon, and fire.

To quote the conclusion to which Mr. Tate has arrived: "As the functions of the Druids were varied, so might these sacred stones be used for several purposes. On them, as altars, sacrifices may have been slain to avert either personal or state calamities: some of the figures may be the hieroglyphics of the gods to whom they were dedicated: the philosophical views of the Druids might be hieroglyphically and even diagrammatically represented in the circles combined with circles on the Routing Linn Stone, which, situate in a wild district, and probably then in the midst of forests, would be probably such as the Druids would choose wherein to teach their occult doctrines, and practise their superstitious rites. Some of the groups of the concentric circles may show their idea of the motions of the heavenly bodies, and the radial lines might set forth 'the influence and ability of the immortal gods' as extending through and beyond the orbits of the heavenly bodies: the planet-like figures might enable them to expound 'the nature of things' as seen in vegetation: possibly the grooves passing from the centre of one system of circles to another might symbolize the passage of the soul from one state of being into another and a higher state. I cannot but think that one of the chief uses of these sacred stones was for magic and necromancy. The religious and philosophical significancy of the figure would add to their impressiveness in the popular mind when used for this purpose, and add to the mysterious power of the Druid priest or magician, when he cast a horoscope or endeavoured by incantation to avert personal or public calamities. I am sensible I am here wandering into the regions of speculations, or it may be of fancy; but these views are not derived from Assyrian, Egyptian, or Hebrew symbolisation, to which our antiquities have no relation: they are suggested by the records we have of the opinions and practices of the people who incised the mysterious-looking figures on our rocks." . . . . . "Those who are not content unless every mystery is fully explained, may feel dissatisfied that, after all the labour and research bestowed on these inscriptions, we cannot read them off as from a lettered book. Before, however, more definite results can be arrived at, further investigation must be made in other parts of the world. Two lines of research may yield information—among the Laps in the far north, or in the east, in the early home of the Aryan family. Something, however, has been achieved—materials for aiding in the fuller solution of the problem have been placed on record, an advanced starting-point made for future inquirers, and a description and representation preserved of marvellous sculptures which time and the elements will eventually obliterate."

METROPOLITAN BENEFIT SOCIETIES' ASYLUM.—The sixty-ninth half-yearly meeting of this Institution, in Ball's Pond-road, was held on Friday, at Salter's Hotel, Mr. Henry Campkin, F.S.A., presiding. Mr. Gawthorp read the report of the scrutineers of votes on the election of an inmate to the asylum, and James Judd, one of six candidates, was declared to have the highest number. Mr. Harris (secretary) read the report of the committee, which showed that in the past half-year a bequest of 50*l.* had been made to the asylum, and the subscriptions were steadily increasing, especially from societies.

ON HOUSE-PLANNING.*

THE habits and well-being of people are mainly influenced by the places in which they live; and the homes are productive of good or bad influences in conformity with the manner of their *planning*. Upon the matter of this or that arrangement of lines on paper, as upon other steps in the practice of his vocation by the architect, depend health, comfort, and morals of the units in a nation, and the collective welfare. There is need, therefore, for study of the subject; and were we to admit truth of some assertions touching a decline in professional skill in the one particular, we should urge the pressing need of the study now. The purpose in works like two which are before us, taken only as addressed to the architect and student, is always a most important one. One of these books, entitled "The Grammar of House-Planning," attempts to grasp the entire subject: the other relates to the particular division, "Cottage Construction," to which, at least, in the matter of planning, some considerable attention of late has been devoted.

The design of the first work comprehends the giving a great variety of plans, or suggestions for plans, of residences of various kinds, and brief essays on subjects connected with arrangement and construction, as a selection of material useful to the man of practice, the student, and the house-proprietor. With the plans are some elevations and sections of buildings, and details of fittings and well-known structural contrivances, and some decorative details, as of doors, windows, and chimneys. The majority of the plan-illustrations are "type diagrams," not drawn to scale, and are merely intended to exhibit general disposition, with occasional alternative or contrasted arrangement of the same features. An "antithetical or contrasted mode of treatment" in the book, is one of the grounds adduced for recognition of its particular utility. The work is put forth mainly as a collection of matter gathered from many sources, our journal amongst the number, and all honourably acknowledged.

There is need that the points that ought to be considered in planning should be stated, both didactically and for after-reference, more clearly than they have been, unless in the fugitive literature in which much that has been well said or written lies imbedded. And contrasted arrangements of plan, aiming at the same result of accommodation, may be made of great service in self-instruction. But that the house proprietor, supposing him to possess knowledge of the language of drawings, will derive what the compiler supposes from this book, we are not able to say. The doors and windows are not many of them good; and of all of them, the ultimate effect would of course depend upon details requiring a skilled hand and drawings the full size; and this, the compiler does not sufficiently point out. But, further, his idea that his diagrams of plan are nearly equal for the purpose he had in view, to plans "drawn to scale," involves misconception. If some of the plans before us were drawn to scale, and inserting the requisite thicknesses of walls, and the number of treads in stairs,—given by height, which the omission of sections allows to be nowhere stated,—they might come out very differently. In fact, for the practicability of one or another arrangement, thickness of the wall or partition is one of the *data* of the question. In the first arrangement of semi-detached residences in the second chapter of the second division of the book, where a drawing-room running from front to back of the house, (a gallery rather than a room,) is shown with one fire-place, out of the centre, and one door, it is impossible to tell how one could get up-stairs. In the same design, "a library or billiard-room" has a back-window close to the party-wall, without regard to any question of the proper mode or sufficiency of the lighting. This window would look into the end of a passage-way of, we may suppose, about 3 ft. 6 in. in width: though, erroneously, the line of division of the two properties is not shown at the back of the houses. To the memoranda of plans of labourers' cottages, in the preceding division, there is less objection: we have not to ask whether the plans have been worked to; and, the examples being given with the names, drawings elsewhere published, and sufficiently explanatory, can be looked at. These drawings, however, would testify to the existence of elements of the question that are left out of sight in the type-diagram method of illustration,—such as the matter of area covered, which influences the cost. This last point, so important as to dwellings of the class, the author puts aside altogether. The first division of the work treats, in six chapters, of "the Site, Aspect, Internal Arrangements, and the Sanitary Construction and Arrangement of the Mansion, Villa, Farm-house, Cottage, Stable, and Cow-house;" and the second division gives, in four chapters, "Examples and Analyses of Plans of Houses from the Cottage to the Mansion," and including "Plans of Farm-houses." What is said on different kinds of farm-buildings is insufficient; and the illustrations of building contrivances are too much confined to the productions of particular manufacturers. That portion of the book which treats of site may be read with advantage; and use may be made of the plans, if it be recollected that there are omissions in them, and sometimes in points that would affect entire arrangement.

The second work which we have before us, devoted to one branch of the subject of house-planning, has much practical information condensed in small space. Its contrasted plans of cottages, with the living-rooms the same size, and the area of each cottage and each room clearly noted, with the chapters on the arrangement of the plan, or details of construction, and on design, may contribute to the improvement of dwellings of the class referred to. The short concluding chapter, explanatory of a dedication to the author's "fellow-workmen in Christ's kingdom," for whose sake "he had studied the subject," however, contains an offensive allusion to men who enter into unions,—not distinguishing clearly between those whose "purpose" is "to bully their employers and to oppress their fellow-workmen," and the many worthy and industrious men who are members of unions,—which will warn off many from the book, who might derive benefit from it. The work is the result of study of a large number of plans that have been brought together at two different times in the last four years by the Yorkshire Agricultural Society, and which were placed in Mr. Strickland's hands to be reported upon. No estimates of cost are given, since an estimate based on Yorkshire prices would be of little value elsewhere. And, in common with the other writer, he regards the actual cost as secondary. He adopts the view that residences provided for workpeople by their employers, are as necessary a part of the establishment for the cultivation of the estate, or for the manufacture of the article to be sold, as the cow-house and pigsty, or the engine-house and factory; and that an increase in the value of property, through a diminished percentage of crime, as well as of differences between masters and workmen, is to be taken into the account.

Of the nineteen different arrangements of plan, eight have three bed-rooms upstairs, and a living-room (14 ft. by 12 ft.), a scullery, and a pantry, on the ground-floor. In each cottage, there is a passage-way, through the house, and a back entrance. The back-entrance, and space of the portion of passage connected with it, as the author perceives, might be taken into the scullery, in this class of house, with advantage in every respect; though, we may say, the same arrangement in many London houses of the lower class, is, in the manner of their occupation, very objectionable. The area covered varies from about 398 ft. superficial to 453 ft. Each plan has the oblong form with an addition at the side or back; and the chief difference between them results from the relative importance given to quarter-partitions between the bed-rooms, and division-walls carried by those of the floor below. The latter arrangement diminishes the area of two of the bed-rooms, and causes one portion of the plan where the pantry, or the scullery, would be placed, to be required to be so large that the space would allow a closet for coals, as in two of the plans before us: but it may be somewhat better for the fireplaces and the more effectual warming of the house; whilst it might (or rather, the author says it would) facilitate an "arrangement" referred to "for supplying hot-water in the scullery by a tap from the boiler in the living-room fireplace." Of course, a coal-hole would have been required in outbuildings.

---

* "The Grammar of House-Planning: Hints on Arranging and Modifying Plans of Cottages, Street-Houses, Farm-Houses, Villas, Mansions, and Outbuildings. By an M. S. A., and M. R. A. S. With numerous illustrative woodcuts and plates. A. Fullarton & Co., Edinburgh; and 115, Newgate-street, London. 1864." 12mo., pp. x. & 190.

"On Cottage Construction and Design. By C. W. Strickland. London and Cambridge: Macmillan & Co. 1864." 8vo., pp. xi. & 121. 18 plates; and cuts.

These should form part of the question of any plan of the main building. The author proposes to group together a pigsty, a coal-house, and a privy, with open shed at the back of it, and with an opening at the base between the two. In the shed would be kept three or four barrow-loads of dry earth; and the privy-seat, opening on hinges, would be used as the ash-pit; and besides the ashes, a shovelful of earth out of the shed would be thrown in every day. If properly attended to, he says, the place might be kept free from smell, and the earth become a valuable manure. He regards a water-closet as in connexion with a cesspool, which must be the means of saturating the soil under and round the house; he thinks that the real deodorizer is dry earth, whilst that as soon as manure is mixed with water it is wasted, and moreover becomes a dangerous nuisance, and that whatever the difficulty in the case of towns, there can be none in the country, especially where the cottage stands in a garden, as it ought always to stand. As to the drain from the sink, it may be carried into the garden, and the drainage allowed to sink into the soil: passed through the privy into a cesspool, it will inevitably cause nuisance.

In the chapter on details of construction, the author describes the manner of laying wooden flooring on a solid bed, so that the boards may not be damp or liable to dry-rot, and so that thinner boarding might be used. He has found the method answer well in a school-room, as the floor is much less noisy than one of the ordinary kind; and we may ourselves add, that the necessary provision for a current of air under wooden floors of basements, is often the cause of a current between the boards, which produces coldness to the feet, especially near the fire-place. Amongst the requisites that the author includes, is an underground tank for rain-water; and for it, he says that an enclosure formed with two half-brick walls with a layer of clay between them, answers perfectly, if water be put into the tank as soon as it is finished, to prevent the clay from cracking. But we have not met with any reference in the work, to a bake-house. This feature of plan has been in many cases, advantageously provided as common to two cottages; and a similar arrangement would seem to be that for the rain-water tank and pump. Mr. Strickland gives two plans of cottages with a living-room, scullery, and pantry below, and with two bed-rooms upstairs. One of the plans he shows might have even three bed-rooms, and within four external walls, provided the third room were allowed to open from the larger bed-room. He next gives plans of cottages with a parlour or bedroom, a scullery, and a pantry, on the ground-floor, and with two, or three, upstairs bedrooms. Cottages with this sort of accommodation deserve to be studied: for, in some districts, the parlour is desired; or there may be very great advantage for the occupants of a cottage in having one of three bedrooms, on the ground-floor. Besides, it is by no means certain that the building may not be more economically arranged, by having only two bedrooms on the first-floor, the scullery and pantry being placed in a lean-to addition to the main structure. The remainder of the plans show pairs of cottages in which the rooms are arranged differently in the two cottages. For example, one of the cottages will have three upstairs bedrooms, and the other cottage two. In this case, the third bedroom of one cottage may be over the pantries of the two cottages. Besides the plans, the plates include different elevations; and these help to explain what is said of the modes of roofing. A sketch specification is given in an appendix.

We ought to observe that in some of the plans, headway would be attainable only by making the risers of the stairs higher than is desirable for old people and children; and that in some, it might be very difficult to get a coffin up and down; whilst that in several, the deduction of space from a room, by a bulk-head, or encroachment of the stairs, would be greater than is clearly shown.

That there is a right and a wrong way of using books of this class, our notice of the two works that we have had before us will have helped to show.

A HIGH-CHURCH SERMON.—A clergyman recently, on the completion of the Barclay Church spire, Edinburgh, says a contemporary, delivered a sermon from the summit. It had an advantage which many nearer earth have not,—it was nearly inaudible to those below.

TERRA-COTTA AND LUCA DELLA ROBBIA WARE, CONSIDERED ON THE PRINCIPLES OF DECORATIVE ART.*

HITHERTO we have looked at burned clay only as it shows itself under its own native tint, usually red, though fashioned with masters' skill into the most artistic forms. Now, let us view it in its very height of beauty, with all the limner's charms spread on it by the means of coloured glaze.

Luca della Robbia was born, A.D. 1400, at Florence, where, from his boyhood, he was, as many celebrated artists have been, brought up to the goldsmith's trade. In early youth he became a sculptor: years wore away, but brought him, in this profession, small gains as a reward to much labour. This hung upon his mind: by day had he long worked with his chisel; by night had he exercised himself in drawing; and often when his feet were numbed with cold in the night-time, did he keep them, for the sake of warmth, in a basket of shavings, that he might not be forced to leave off his sketching. So easily may clay be managed that, under an able hand, it takes little time and less trouble to work in it: its cost is infinitely lower than that of marble. But marble is lasting: how could clay be made so, and, hiding its own, take the look of marble too? Such were the thoughts, the untiring thoughts, of Luca. "After having made experiments innumerable, he found that if he covered his figures with a coating of glaze formed from the mixture of tin, litharge, antimony, and other minerals and mixtures, carefully prepared by the action of fire, in a furnace made for the purpose, the desired effect was produced to perfection, and that an almost endless durability might thus be secured to works in clay."—Vasari, i. 340. "Not satisfied with his remarkable, useful, and charming invention . . . . Luca still continued seeking something more, and instead of making his burned clay figures simply white, he added the further invention of giving them colour, to the astonishment and delight of all who beheld them."—*Ib.*, p. 341. In these few words have we the history, as Vasari writes it, of that charming branch of art in coloured burned clay, upon which the fashion is to bestow the name of Della Robbia ware, and which, for very many years after the first Luca's time, continued to be almost exclusively wrought, at least in Italy, by his family, and those scholars to whom he had made known the secrets of his craft.

Italians, in general, know nothing of the arts, and how they were followed abroad, after the fall of the Roman empire, but seem to think that art of every kind had no existence anywhere but among themselves. No wonder, then, that Vasari, though wrongly, claims for Luca the honour of being the inventor of applying coloured glazes to burned clay; and the only artist in it at the time.

The art of fixing by fire upon clay sun-dried, if not already baked, the two sorts of glaze—the colourless and the coloured—was well understood among the more cultivated nations in Europe, Asia, and Africa, from remote antiquity. Spread with great niceness, either partially or entirely, over those admirably-figured and beautifully-shaped fictile vases which Greece wrought at home, or by the hands of her colonists in Italy and Sicily, as well as upon that finer kind of hardware now generally known as Samian, do we observe a delicate, thin, colourless, transparent mineral glaze. A coarser sort of glazing was used by the Romans, who have bequeathed us such a mighty heap of pot-sherds, on the banks of the Tiber as to merit its present name Monte Testaccio. At a very early period the Egyptians ornamented many articles with a coloured glazing. In the Middle Ages, as early as the eleventh century, upon those fine belfries to the churches at Rome, and built during that period, do we see, let into the brickwork, those curious large round concave pieces of hardware that glisten again as bright as ever with their bright green glaze even now. Later, the art was brought to great perfection by the Saracens, and carried with them wherever they settled themselves around the basin and in the islands of the Mediterranean. Under them the south of Spain won for itself great reputation for its works in burned glazed clay, and more especially for its tiles, which, from being at first usually tinted with a bright purple glaze, bestowed their own specific name—Azulejos—just as Faënza did to pottery in France, upon tiles of all sorts, and as a generic denomination. Those who have seen the beautiful Alhambra must recall to mind how several of its splendid halls are floored with these same tiles still bright; and their walls, in part, skirted, after a tasty pattern, with cubes of various colours, in the same material. But in Tuscany itself, and not long before, Jacopo della Quercia had employed a glazing—a colourless glazing, it is true, but yet a glazing on burned clay as we have seen upon that valuable and instructive chest-front in the museum. Here, in England, the glazing by fire of sun-dried clay tiles, especially for church decoration, was known and followed at an early period; and the specimens that have come down to us from the thirteenth century, and found at Chertsey, Castle Acre, Woodpery, and several of our other old churches and minsters, show not only a great elegance in design, but disclose the process used in making them. While yet the well-fined and kneeded clay was soft enough, the design was deeply sunk into the face of the tile by a stamp, and the hollow thus struck filled up with white pipe-clay. Over all this was floated a metallic yellow glaze, that in the firing gave to the red a warm, full tone, and a rich golden hue to the pattern done in white clay. In Germany the same art, after a simpler way, was practised. The "Acta Sanctorum," by the Bollandists, furnish us with the cenotaph raised, in the old cathedral at Hamburg, to the memory of Pope Benedict V., who died A.D. 965; and, after the fashion of our English high tombs, its sides are skirted with glazed tiles, figured with sacred subjects and the persons of the apostles, the figures being white upon a green ground. Such a method was, therefore, very old and widely spread. While refusing, then, to recognise in Luca della Robbia the inventor of coloured glazes as applied to burned clay, we must not, cannot rob him of the glory of being the first to use them with such new, such bold, such marvellous effect. In going round those recesses in the northern side of the north court in the museum, to study and compare this great artist's and his followers' several works, well may we with warrantable pride congratulate ourselves and our country too, that at present there is nowhere else, not even in Italy, in Florence itself, brought together under the one same roof and crowding near the one same spot so many masterpieces, and after all its several styles, of the Della Robbia school. On looking at them a short time, we find they may be distributed into four distinct manners, consisting of,—

First, those that are overlaid with a thick, plain white glazing, so as to make them look like marble, but having the pupil of the eye, and brows shown in black; and, if in relief, the figures set upon a plain deep-blue ground.

Secondly, those in which the drapery on the figures is variously coloured.

Thirdly, those—and they are by far the most valuable—which have the fleshes, besides the drapery, all shown in their appropriate colouring; and the blue back-ground made to become the sky, with the foreground, and trees, green, the buildings of a proper tint, and the whole in perspective.

Fourthly, those in which the fleshes are left in their burned clay state without any coloured glaze upon them.

Of the first manner, some of the examples are very beautiful; and among the foremost which I would specify, from being, as I take it, the earliest we have, is number 4,411, representing the Blessed Virgin Mary seated on the ground with her divine babe stretched out upon her lap and gazing on her: nothing in heathen antiquity is more graceful. The "Adoration of the Wise Men," number 438, simple in its arrangement, is artistically done. A Franciscan friar, in the act of falling, is worthy of attention; so, too, are those several heads, almost life-size, standing well out and admirably modelled. A small figure (7,702) in the round, of Our Lord as a child, with His right hand uplifted in benediction, is nicely executed; so are those two angels, in the round, kneeling in the act of worship (7,614, 7,615), which, with the still larger statue of an apostle (1,248), furnish us valuable examples for study in this first manner of the school. No. 7,596 is noteworthy. This "Magnificat," as it may be called, represents Our Lord as a little baby lying on the ground. Kneeling, with hands clasped, and head bent reverently down in prayer at His feet, the Blessed Virgin Mary worships Him as her Maker and Redeemer, saying again those words, "My soul doth magnify the Lord: my spirit hath rejoiced in God my Saviour." Throughout all

* By Dr. Rock. See p. 612, *ante*.

Christendom, this has been a favourite subject, and it is not surprising that we have it in this collection several times, as in No. 4,032, and others. Though last upon our roll, No. 7,630 may be looked on as one of the finest of its kind in this collection or elsewhere. Within a splendid wreath of fruit and foliage, the Blessed Virgin Mary seated is nursing our infant Lord upon her lap, and the clear blue sky behind them is flecked with fleecy clouds: the shield of arms upon the bracket which upholds the group, tells us, by its blazon with the label, as it seems, of cadence among its seven balls, and its difference in tincture, that it was wrought for some younger member of the house of Medici. I happened to be in Rome when this piece arrived there from Florence, and was one of the many invited to view it for the first time at his house by its late owner, who had assigned it a room of its own, where it challenged and won the admiration of the crowd that went to see it.

As examples of the second manner, we may instance No. 1,090, the small but artistically modelled figure of St. Anatolia, who, by her prayers, is forcing the dragon at her feet to yield back Audax, just converted from heathenism to Christianity, and whom the evil one had partly swallowed. The veil upon her head is black, the palm-branch in her right hand is deep green, the book in her left, with golden bullions on it, purple, as are her shoes, and the ground and the dragon, green. No. 4,677, as the second, in which we have a little naked boy, admirably done, playing on a bagpipe, which instrument is coloured light blue.

As filling an intermediate space between the first and second manners, fitly may we place here that magnificent altar-piece (6,741), figured, in white upon a blue ground, with the "Assumption," where St. Thomas is catching her girdle, which the Blessed Virgin Mary has thrown down to him as she rises from her grave, now blooming with flowers, the stems of which are green; and the marble and porphyry in the panels of the tomb are in their natural colouring. Had not the artist's botanical knowledge been very small, never would he have given the lily but two instead of six stamens.

For illustrating the third manner, it will be quite enough to point out but two of the splendid specimens in this museum. Of these the first number (4,412), representing the "Adoration of the Wise Men," exhibits to us one of the greatest art-triumphs in coloured burned clay, combining, as it does, in one piece, the beauties of painting along with all the charms of sculpture. Its crowd of figures, above twenty in number, some on horseback, is broken into well-arranged groups, mostly in strong bold relief; those on the middle ground are much lower; and to carry out the perspective, the objects on the background are merely painted in, and the whole so admirably coloured as to give a life-like appearance to the people and the animals, and a look of realness to the scenery behind them. In his life of the elder Luca, Vasari says: "The master still sought to make further inventions, and laboured to discover a method by which figures and historical representations might be coloured on level surfaces of burned clay, proposing thereby to secure a more life-like effect to pictures."—T. i. 343. Those twelve shallow blue disks of the months in the museum are precious examples of this style, but upon the piece before us do we see it employed most successfully, so that here we behold, upon the one same work, all the means, modes, and appliances of Della Robbia and his school. The other illustration is (3,986) a "Last Supper," treated as the subject was usually treated then in Italy, as we find by many an example—Leonardo da Vinci's among the rest—and, like his painting, was placed upon the wall at the high table in the dinner-room of some religious house. Here, the heads, hands, and feet are all tinted more or less,—our Lord's being white. The glazing colour is put as thickly on the fleshes in one figure as in another; and being quite opaque, of course hinders anything like transparence of the red burned clay beneath. The faded, blackened nimb about the head of Judas well betokens that traitor from the rest of the Apostles; while the striking yellowness,—the Mediæval emblem of bile, deceit, treachery,—in the upper garment given him in the seated figure, in the glass case not far off, will be noticed by those who study the symbolism of colour.

Under this third class may be enumerated those examples of heraldry, and most especially that very splendid and effective one blazoned with the armorial bearings and devices of the far-famed René of Anjou.

Surprising is it that the Della Robbia family never hit upon the right way of producing either a red or a crimson glaze. The pigments needed lay within easy reach of their hands; the so-named Theophilus, in his "Diversarum Artium Schedula," had given the best known method for preparing them; and by the kindred trades of making stained glass and working enamel upon metals, these very colours had been commonly and effectively employed, without stint, many years before the time of Luca, who could not but have seen various specimens of both in the windows of old churches and the several liturgic vessels for the altar.

Of the fourth manner in which, while the rest of the figure is coloured, all the fleshes are left in their first unglazed clay state, it may be sufficient to note here, from amid a goodly number of examples, the following few, of which, among the first, shall be,—a very admirably modelled life-size bust of our Lord in His Passion. Though the crown of thorns is glazed green, and His garments of a fitting colour, His neck, face, and long hair are left in untouched red burned clay. Along with this may be joined those two admirably-executed figures,—one (2,413) of the protomartyr St. Stephen, vested as a deacon, but wearing the maniple on the wrong wrist; the other (2,414), St. Anthony of the Desert, in the habit of a monk. Another, but small sample, in low relief, is our Lord as a little child, gracefully plucking a lily while sitting on His mother's lap. A third, a relief, is St. Jerome in the wilderness, on his knees before a crucifix. The last (5,401), a beautiful Nativity, in which all the fleshes are in plain burned clay. In this relief, however, there is a circumstance which ought not to be overlooked. On the left-hand side is a little shepherd boy, whose cloak is not glazed, but stained purple, and with oil-colour put on before, and fixed in by the firing process, which accounts for its dull, heavy tone, reminding us of the colouring on Lord Taunton's fine large bust of Lorenzo de Medici. The tunic, too, of the Blessed Virgin Mary, a sweet figure, is done in red, after the same process, but in places the colouring has scaled off. It has been assumed that the unglazed fleshes, as well in these as in all other like examples, have been painted in brilliant distemper colours, now flown. This I doubt; and, to my thinking, the nude parts left unglazed were, before the firing of the piece, rubbed with a mixture of oil and emery, or brick-dust, for the double purpose of giving them a somewhat different tone, and a kind of smoothness. Some of the oil sucked up by the clay got fixed in through the fire, and accounts for that sort of grimy, greasy look which, in most cases, those unglazed portions now exhibit.

The moulded ornaments of a mere architectural nature were, as we have before observed, often re-touched by the artist, before being sent to the fire; but, by a near inspection of the burned clays, coloured and uncoloured, in this Museum, we learn how carefully have some of them been gone over after the first firing, and, when glazed, before the colours were laid on, and with some sharp instrument, wielded by a master-hand, cut and carved as to give them a peculiar beauty and expression, at a single touch.

Having thus noticed these four several manners in Luca Della Robbia and his school, a word must be said about the frames with which so many of them are bordered.

One thing sadly overlooked at the present time is the wretched taste amongst us upon the framing in which all sorts of art-work is usually set. If, till lately, we had carpenters' Gothic everywhere, we still have upholsterers' golden gaudiness running rampant all around us: the same shaped machine-cut moulding flashily gilt will do for every requirement, whether sacred or secular, for every place, drawing-room, or oratory. Not so was it during the Mediæval period; then, here in England, as well as in Italy, and everywhere else, the frame-work,—especially for subjects of a religious character,—was not only elaborate, but artistic; and by the greatest masters it was deemed not beneath their care to design, and so render it fitting for and worthy of the noble work it was intended to enshrine.

Those massive bushy wreaths with which, instead of frames, Luca loved to garland almost all his productions or to hang somewhere about them, were as new to art as they were singular, and struck the world at the time, as much as they must strike every one at present, by their beauty and admirable execution. Fruit and foliage were never so exquisitely wrought and tinted; and, up to the present hour, nothing that has been done of the kind at all comes near them, either for form, for grandeur, or for happiness of colour: who among our artists will get before Luca in this ornament?

From the fact that so many of the Della Robbia examples belonging to the first-class of plain white marble-like figures on a blue ground are wreathed with these garlands exhibiting in their fruits and foliage such varied colours, it would seem, notwithstanding what Vasari says, that at the very outset, Luca knew full well how to produce metallic glazes of different colours. Even when working after his first manner, he sets his pure white figures upon a deep blue ground. Getting beyond the idea of mere marble-like productions—perhaps, too, in obedience to the traditions and wishes of the period—he used the same tints he had heretofore employed upon his wreaths, and glazed at first the draperies; soon afterward the fleshes, too, as best he could, of his figures, in their proper tones. By doing so, he made his work become another link in that long bright chain of evidence which shows how, from the remotest antiquity, the highest masters in the art have always given colour to statuary—to images of every form, and style, and class. From the earliest ages, and all through the best period of her several schools, under such mighty men as Phidias and Praxiteles, in Athens—the very centre of refined taste and severe criticism—Greece gave a colouring to her statuary and carvings. All along the Mediæval period the images of the saints, whether set up outside or in a church, the reredoses on its altars, of alabaster, stone, or wood, as the case might be, both here in England, and elsewhere throughout Christendom, were artistically gilt, and as artistcally painted. Being done in distemper, this colouring has fallen off the sculptures of the Greek and Roman epochs, merely leaving faint streaks and traces here and there of what their coloured beauty must have been. The now empty sockets in the face of many an old statue tell us that, once, the missing eye-balls were of precious stones; and those pierced ears, that gold and jewelled earrings used to hang from them; while the various coloured marbles forming the draperies upon some of the Roman busts are all unmistakeable proofs of the ancients' love for colour upon marble. This colouring of carved work is even now continued in Spain, whose schools of art, especially in this sort, are little known by Englishmen, whose desire for other and more numerous specimens from that country will be quickened after viewing the few but admirable ones—especially in carved and coloured wood—added, but a few months ago, to the South Kensington Museum.

As nature gives a proper colour to everything, to the earth and skies, to the vegetable and animal existences it every day brings forth: as in man, the eyes receive their brightest flash of love or hate from their colour at the moment; the cheeks betray their sense of shame or rage by the blush upon them; the lips, the heart's fear, by their ashen whiteness; as living man himself never, but the ghost of man when seen, is seen all white—all colourless, let us then, with the authority of nature and the practice of all antiquity as our warrants, advocate the taste for coloured statuary, and rejoice in the samples we have of it in the works of Luca Della Robbia.

As far as their general style there is much to admire, but a good deal to lament and avoid in the productions of that master and his followers. Like all the rest of his countrymen at the period, Luca was dropping, one after the other, the reverential teachings, the lovely forms, the simple graces traditionary in the Umbrian school, which, in fact, was strongly akin, in its types and precepts, to all the other schools of sacred art in England, France, and other parts of Western Europe. Classicism, it is true, with its over-long necks for females, and its straight meaningless profiles, had not got hold on the Italians then; but, instead, a naturalistic feeling—a feeling towards a close copy of unselected nature to an almost forgetfulness of the beautiful in mankind; yet withal, a gleam from out the forsaken paradise—a something kept of the olden better time still hangs upon a few of Luca's figures—those of the blessed Virgin especially.

However much to be admired, from a chirurgical point of view, and praiseworthy as far as superficial anatomy is concerned, may be the

quite naked body of an infant, yet in all art-works, more so of our divine Lord, is it more seemly as well as respectful that some draping should be thrown about it. This, however, even of the scantiest sort, was forgotten by Luca, and, like him, too often by the artists of his day: the ablest man in art is he who, while he can represent the beautiful becomingly, knows full well how to make the true to nature look holy and reverential. Still, for their grouping, their modelling, their expression, many of the Della Robbia works are admirable.

It has been asserted that, during the Middle Ages, all the western countries of Europe produced remarkable works of sculpture; but it was in Italy alone that art attained to a perfection worthy of comparison with the antique, and in Italy alone can its monuments be thoroughly studied. Giving my most hearty assent to the first part of this judgment, I as heartily disagree with its other portions. Let any one go to Wells, Lincoln, Peterborough, Westminster Abbey, or several other of our glorious Mediæval churches and cathedrals,—without asking him to cross the sea, and wander over France and Germany,—sure am I that a first short view will give him magnificent examples of sculpture done by Englishmen, in England, better than anything of the time abroad; which, considered under the more essential aspects of art, were never surpassed, and not often equalled by the most celebrated productions of ancient Greece or modern Italy; and I hope the day is not far off when the country will awake and open its eyes to the value and perfection of its own home-wrought works of art, and have casts from the best of them to occupy a becoming place in this museum. What has been done may be done again in England by Englishmen. Richard II. granted a licence to Cosmo Gentili, the Pope's collector in England, in 1382, to export three great images of the Blessed Virgin Mary, St. Peter, St. Paul, and a small image of the Holy Trinity, without paying duty for them. Who can tell, but, some future day, London will, once more, send statuary to Rome?

After this short and hasty sketch of burned clay in its highest artistic developments, our next step will lead to

The Second Part,

the most important object of the lecture; and to view it as affording illustrations of the principles of decorative art.

Like the architect, the artist must think beforehand well of the sort of climate he has to deal with, for the better choice of his material. Now here in London have we thick fogs, with their dampness, smoke, and smuts, gas and its tarnishings; but if there be one thing better than another for bidding defiance to the spoiling effects of these agencies, it is glazed burned clay. Let us then see how and where it may be used, under its first and least expensive form, that of a colourless glazing.

How many a man whose means are small, with a strong love for art, who would like to have his little home decorated, to behold around him the busts of his wife, his children, his fast and faithful friends; the writers who have enriched his mind; the worthies in that profession he is following. Besides being far too expensive, marble, by its weight would crack his slim walls, and pull his slightly-built house to pieces. All these he can have in clay, even though his purse be shallow, and so artistically done as to make his house beautiful. Here and there in his little hall, up his staircase, along the landing-places, could he have a bracket and a bust. As well in his library as in his dining-room, the cornice might be storied in plain glazed burned clay; and fortunately for all such purposes, we have two kinds of material, the red and the white clay; and thus, the ground may be in white clay, the relief in red; the hollow holding the bust in white, the bust itself in red; or we may reverse them, so getting the agreeable contrast of colour as well as form. His wife, too, might have the nursery adorned with something to instruct as well as amuse the children, and put high enough to be beyond the reach of a knock, even which, if not very hard, would not break it. Servants' hall and kitchen might have their subject, telling its lessons of thriftiness and good housewifery. The panels under windows might be advantageously filled in with low reliefs; and not only with such panels in walls, but in articles of furniture. For such an application of plain red burned glazed clay, we fortunately have a splendid example in the front of a chest in this museum, done by the hands of a celebrated master, Jacopo della Quercia, and figured with the fall of Adam and Eve.

Too heavy a stress cannot be laid upon that same chest for its most valuable teachings regarding the very many decorative capabilities of red glazed burned clay. Of our furniture, take but a few examples. The larger those looking-glasses hung upon the walls of our reception-rooms, the narrower it seems to be the fashion now, to make their frames which, so far from being anywise artistic in design, are almost always after the one same machine-wrought pattern, very commonplace, not to say vulgar. Yet, few are there among the articles of decorative furniture upon which an able hand could better show the cunning of its craft. Divide those over wide-spread sheets of glass into compartments, making them architectural according to the house's style; give them the appropriate ornamentation in bold projections; let the whole of the frame be of a warm brown ground, to throw well up the gilding; and require it to be a work of one who can think of and do something beyond shallow moulding, and a bunch of flowers all in the one same garish gold; have the frame ornamented, like the old Italian chest-front, with real art, in red glazed clay.

Among people of taste, and knowing what was, whilom, the favourite custom in good houses everywhere through England, the side-board is being brought back to its first full old use, and has had given it, for the better display of rich pieces of plate, rows of shelves all up its high glazed back with its gracefully overarching head. Here, then, is another field for true art-work in burned clay: upon its lower panels, its sides, its overhanging canopy, a master may show such skill as to make this sometimes inconspicuous article of household goods, become by day and night a magnificent adornment of the dining-room.

If inside the house,—so, too, outside, might the same material artistically wrought, be well employed. The chimney-pots in London are generally ugliness itself. Often the short length of a glazed brown draining-pipe one sees doing duty for the nonce as a chimney-pot to the temporary shed run up for the foreman, has more beauty about it than those red or grey dull tubes lying near that are to be, ere long, put upon the house now building. Though chimney-pots, like that very fine one from a house of the last century, and lent to this Museum by Mr. Vaughan, would be too expensive, not to say out of place for most habitations; and those copied from Eton and other sixteenth century erections, out of character for houses of a different style; yet something could easily be done to free us of our ugly chimney-pots.

There is one exterior feature in our houses, large and small, to improve which red glazed burned clay is most applicable,—I mean the doors. Putting aside its expense, the painting of house-doors is no small annoyance; yet from sun and rain, and the varied action of our atmosphere, such very soon is the cracked and curdled shabby look of the new paint and varnish, as to need having them put on again at least every two years. Now, besides the artistic beauty it would bestow, the saving in money and convenience afforded by it ought to make us try the application of burned clay as a casing, after the manner of its use in Jacopo's chest-front. Though now so unartistic, our street-doors might readily be rendered ornamental, even less costly in the end, and be made a help in redeeming our domestic architecture from the blot which rests upon it. Long ere Virgil sang (Georg. iii. Æneid 6) of portals magnificently wrought and sculptured, and long afterwards might they be found in many places. In the Middle Ages, very many years before Florence could boast of either of those splendid gates to her baptistery, an Englishman, Master Hugh, who had surpassed every other artist of his day, surpassed himself in the beautiful doors he worked for the church at Bury St. Edmund's. At the present hour there is not one handsome street-door in the whole of London. However good as carpentry, in design, our house-doors are hardly better than the one the settler in the backwoods of Canada hangs upon his log-built hut. Put in panels, like Della Quercia's, figured with subjects; boss the frames with busts in bold relief, all wrought in glazed red burned clay, and you save your money at the time you get ornament. Not only would it be serviceable and artistic on and in private houses, but in all public institutions it might be advantageously employed.

In theatres, in music-halls, in lecture-rooms, in schools, in every sort of construction meant for the free circulation of sound, it is the very material to be used; for every one must know that, for singing and speaking, every kind of drapery-hangings, in any form, are bad. Now, if this material were employed in the decoration of such erections, the buildings themselves would have a cleanly, lasting ornament, which, while it beautified their walls, did not hinder the wished-for transmission of sound; nay, if managed well, and had given them the required hollowness, the reliefs and statues themselves, instead of deadening, will send back every sound clearly and without an echo. In regard to schools, why, for years perhaps, keep a boy in rooms so dull to him? Like one of the Dukes of Mantua, make the school a "joyful house,"—not forbidding, but gladsome. Let the pupils see around them the memorials and the busts of those who, in bygone times, sat as boys upon those same forms,—men who had made for themselves a name of renown in the army and navy, in Parliament, or at the bar, as inventors in science, great in the arts, famous as writers, distinguished for their success and honesty in trade, as benefactors to and worthy of the land that gave them birth; and let the boy know there is still an empty niche which, if he strives and lives as they did, his bust will some day occupy.

Those long, blank, dreary wards in our hospitals ought not to be forgotten. Why should the poor, but perhaps once wealthy and well educated, slow-recovering patient, be left with nothing better, nothing more healing to his ache of heart, to do, than day by day to reckon how many panes there may be in the window opposite, or find out the number of checkers in a foot square on the white and blue curtain by his bed. Most times to the sick it is very wearisome to listen five minutes together; but long to themselves alone can they think. Many a man and woman cannot spell a book; all can easily, without toil, read art-writing on the wall. Then let that writing be there, to speak of hope, to tell of comfort. This quickens convalescence. The cost would be small, and the public money never better spent.

But getting abroad among our streets in London and our large towns, and upon the road-side in the open country, we may notice in how many ways burned clay merely glazed can be cheaply employed as a decorative, and, at the same time, useful art.

Within a few years has grown up the praise-worthy custom of having street-fountains; but of those hitherto put up, almost one and all are wanting in artistic beauty, and lack one great requisite — a provision for the poor dog that wants to slake its thirst at all seasons as often, may be in summer time to hinder madness—often than its master. To show where milk is sold, the likeness of a cow is set up at the dairyman's window; while the vendor of horse-medicine displays an image of the animal in his shop; the little black boy and the big Highlander are the old and well-known signs of the tobacconist. This is a recognition of the utility so ancient of advertising by art-means. Now, not only these, but all other trades, at no great charge, might tell conspicuously upon the upper portion of their shop-fronts, and over their doors, in large art-characters, what wares they sold; and, in doing so, advantageously advertise their crafts, and at the same time beautify the houses in the humbler quarters of our cities. Wandering about our great thoroughfares, there do we find over several of them railroad-bridges throwing their huge, ungainly, lumpish selves—always very ugly—often quite black. Fill in the wide panels at their sides with reliefs; plant along the top a few statues, all in glazed red or white burned clay; and what was an eye-sore becomes, at a small expense, a pleasing ornament.

While still upon our stroll, and we reach our finest streets and widest, most majestic squares and terraces, we cannot but allow that the most lordly-looking residences there, and the most palatial of our noble club-houses and public buildings, would have new grandeur added to them were their fronts varied by reliefs, and their sky-line better broken and improved by statues in burned clay upon their parapets.

In the country, a squire would often like, but for the expense, to make the village school a pretty feature on his estate. Now, he may do this with the help of burned glazed clay, and without a deep dip into his pocket, or practising any sham in his materials. The burned clay will afford him good hard mullions and tracery for windows, a becoming porch, proper chimney-

pots, rightly-shaped tiles, and pleasing crestings for the roof.

Many a mother, many a widowed wife having, though poor, feelings as sharp as those of their more wealthy neighbours, would, if they might, erect a memorial over child and husband, and mark the grave by something more lasting than a flower. Wood soon rots; stone for them is too expensive: not so glazed burned clay, which will defy moss or lichen to overgrow it.

Everywhere finger-posts abound; often, however, in a moment of utmost need, they cannot guide our path, for the weather has done its wasting work, and the writing is clean washed out. In glazed clay we find a thing for all our wants, and upon which sun, and wind, and rain will harmlessly waste their obliterating powers. Here, too, a man of taste, and blessed with the means, can find an admirable opportunity for the display of art, and showing his thoughtfulness for others. Though not of duty, yet how gracious would it be for such a one, instead of the too often useless wooden tottering finger-post, to erect, after a good type, a Mediæval cross so built as not only to point the path to the neighbouring villages, but answer as a resting-place for the worn-out traveller, who might find a seat beneath its shade, and to quench his thirst, a draught at the spring hard by. Thus did our Anglo-Saxon forefathers; Venerable Beda tells (Hist., ii. 16), that King Edwin, A.D. 628, in very many places where he had seen clear springs of water by the wayside, caused stakes to be put up with brass basins hanging to them, for the refreshment of the wayfarer. This, then, was the custom a thousand years ago in this land, but now we are behind the Mahommedans in such kindness. May good old usages come back; but besides the cup for the man, let the dog have his pan, the horse a trough afforded him; and the lord of broad acres who so does, will be adding his dot of the beautiful as well in humanity as in art, on his native land, and at small cost too.

From the enumeration of these among a large number of other instances, how uncoloured but glazed burned clay may be aptly, and at no large outlay, brought into use for decorative purposes, we will now look upon it for a like object as it shows itself in its highest, most attractive form, with the additional beauties of colouring upon it.

While, of the instances just given, hardly is there a single one wherein coloured burned clay might not have been as fittingly employed. Some there are in which it is, by far, more becoming to the place and its occasions.

In a house of the slightest pretension, coloured burned clay finds an appropriate employment within every reception-room. Here, the flowered borders to the papering might well be replaced by a bold wreath of fruits, flowers, and foliage standing well up in the manner of those garlands hung round his works by Luca della Robbia. At the tops of walls, and around the edges of ceilings in dining and drawing rooms and ladies' own apartments, the fashion now is to have, run in plaster, mouldings more or less broad and elaborate, sometimes faintly coloured in one or more tints and pricked out in gold. Soon these colours fade, the gilding tarnishes, and the wide round ornamentation above the chandelier in the middle gets smirched—quite blackened by gas or smoke of oil, as it may be. Now, instead of all this plaster-work, put wreaths of coloured burned clay, and what will be the results? Along with the beautiful you will have cleanliness: any tidy servant with a light brush and a soft duster in hand, and by the help of a tall pair of steps, will, in a morning's time, make cornices and ceiling look as bright, as fresh, and as free from smuts and dust as they were that day when first they were so decorated. Upon the entablature from the destroyed church of Santa Chiara, at Florence, of its chancel, the whole of which, with its stone pilasters, is now set up again, and standing in the north court of this museum, we find a teaching application to architectural decoration of this material. In this specimen of the Italian fifteenth century style, the frieze is by the hand of the elder Della Robbia himself, who has figured it with cherubic heads, the Holy Lamb, and I.H.S., in white upon a blue ground; and though 400 years have passed over it, is all unhurt by their footsteps.

Ages before Chaucer sang so sweetly about the "Flower and the Leaf," flowers had been, as they still are, great favourites with English people; and in no other city do we find so many windows made gay and fragrant with them as in the streets of London. The plain red flowerpots, years ago, gave way to the long narrow wooden box that, in its turn, has lately been improved by changing its coat of green paint, for a facing of flat glazed coloured tiles, some good, but more bad in their design and contrast of colour, and all wanting in that charm of light and shade which they would have had were their smooth, even surface sunk into a design, or broken by a pattern in relief. Here, then, is a domestic appliance capable, in good hands, of being made beautiful and artistic. Many of our bettermost houses now are built with bow-windows. Take one of these bows; plan the outside boxes to all three windows in it to be but the parts of a connected whole, so that they rest not merely on the sill, but upheld by well-designed brackets, run all round with vases, or, better still, with groups of figures between them where the windows are parted; instead of flat tiles, use sunken, deeply-moulded, richly-coloured ones, like some in the Museum designed by Pugin, and of Minton's make; and thus, no matter the time of year, without, as well as with flowers in it, you have a thing of beauty at your windows, and a pretty feature on your house front.

The baldness in the walls of many a large house, the meanness in many a small one, might be well and easily removed by a few medallions, or a string-course in relief. If a good man's, or a good woman's name ought never to be let die, how gracious to the living,—how still more thankful to the mighty dead,—mighty in thoughts and words, as well as deeds—deeds of charity and kindness as well as hardihood,—would it be in those who live where lived those great ones once, to tell the world of it, by a bust over the door, or a relief upon the wall, with his or her armorial bearings—had they any—all in coloured burned clay.

It is, however, upon buildings for public purposes that this style of ornament may find a large employment. Theatres, music-halls, lecture-rooms, and, in general, every place intended for harmless amusement and healthful recreation, should be rendered as cheerful and as gay in their architecture as possible: their ornamentation ought to look as good by broad day, as well as night, capable of helping, not hindering, sound: so also of all those places of constant resort in a large city like London—its Guildhall, its Exchange, its especial trade-marts, its halls of the many particular companies, the termini of our railroads, and the waiting-rooms and large halls at them. In most, if not every one of these different buildings, might all the resources of coloured burned clay be most admirably employed, but amongst its appliances there is one—heraldry, fine examples of which are to be found in the Museum that would have a most telling effect; for armorial bearings, ever various through the great variety of their changes, and the tinctures on the shields, never fail to strike at the same time that they please the eye.*

A RUN TO THE LAKES: BORROWDALE.†

As we are not travellers in search of the picturesque merely, we must ask our readers to have patience with us while we try to describe some of the most prominent physical phenomena of the English Lake district.

We need scarcely repeat what everybody knows, that the Lake district consists of a series of mountain ridges and plateaux of the very highest altitude in England; although still the lowest in the scale of Great Britain and Ireland. Thus Scawfell Pike, in Cumberland, which is the highest mountain in England, is 3,166 ft.; Snowdon, in Carnarvonshire, the highest mountain in Wales, is 3,571 ft.; Ben Macdui,‡ in Aberdeenshire, the highest mountain in Scotland, is 4,418 ft; and Gurrane Tual, in county Kerry, the highest mountain in Ireland, is 3,404 ft. above the level of the sea.

It is no part of our business to enlarge on the cosmical theories of the various schools to which the Cumbrian mountains are correlated. The Plutonists have had their day; the Neptunists have lived to see their philosophy submerged; and the votaries of the Icebergs have long since been liquified or solved. Whether these *lacunæ* have been worn down by water or scooped out by ice, will be accepted just as we adopt the theories of a fluvial action (which is difficult) or a glacial action (which is more simple). Some of the lakes, as Ennerdale, do not exceed 80 ft. in extreme depth; Windermere is 240 ft.; and Wast Water, which is so deep as never to be frozen, is 270 feet. With regard to their altitude, this varies a good deal. Windermere is only 116 ft., Ulleswater is 380 ft., while Thirlmere is 473 ft. above the level of the sea. Some of the small receptacles of still water called *tarns* far exceed these measurements. For example, Sprinkling Tarn, in Borrowdale, and Red Tarn, on Helvellyn, lie at an altitude of 1,900 ft. and 2,400 ft. respectively.

The next point we must notice is the technical geology of the district. But no sooner do we begin to investigate this subject than we get into a perfect labyrinth of scientific miracles. The great *original* authority, we may state, is Professor Sedgwick, whose letters to Wordsworth form the basis of all the modern systems of the geology of the Lakes. From these letters, and other publications of Mr. Sedgwick, and particularly from the admirable synopsis of Professor Philips, appended to Black's "Guide-book," we are enabled at least to give the reader a rough idea of the subject.

The Lakes of the north of England, like those of Scotland, Wales, and some districts of Ireland, are situate among the most ancient of unstratified rocks, including slaty formations with organic remains, and others still older, which have not as yet yielded any fossils.* These strata form in a general sense one broad rugged dome, surrounded on the flanks by later deposits of old red sandstone, mountain limestone, millstone grit, coal, and new red sandstone. The map of these strata shows us the following superimposition:—

A. The mountainous district of slaty rocks, inclosing the Lakes.
B. The raised border of limestone grit, coal, &c.
C. The plains of red sandstone.

But the regularity of this rugged dome and its borders is disguised by a thousand inequalities of detail. The strata of the interior are not uplifted in a regular arch, but bent into innumerable complex curves, forming anticlinical ridges and synclinical hollows, and all so broken by "faults" that the originally continuous rocks are divided, and the parts changed in level from 10 yards to 1,000 yards! These great movements of the strata were accomplished with violence; and one of the coincident effects was the forcible injection of melted rocks into many of the fissures and void spaces left between the broken masses. Thus granite, porphyry, and other rocks produced by heat, and *not stratified*, have found their way amongst the older strata, and have produced on them, near the surfaces of contact, certain chemical and mechanical changes, converting the sunk and argillaceous masses into compounds which approach to the nature of the igneous rocks. To these the title of metamorphic rocks is assigned.†

These metamorphic rocks, however, as well as the vast chains of granitic and igneous rocks, are for all economical purposes next to useless, and the great mass of the sandstone, unless it be on the outskirts of the great field of clay slate, is unfit for building purposes. The few specimens we collected and examined, such as those from Tallantire, Lammonby, and a portion of the old red sandstone from Baggrow, were coarse in the grit, and very friable; although we have seen excellent specimens from the quarries of Cockermouth on the one hand, and Penrith on the other.

The clay slate, therefore, is, the rock of greatest importance in the central lake districts. In the original Cumbrian group of Sedgwick, it is divided into three great generic classes, as follows:—

1. Hornblendic clay slate (lower).
2. Chiastolite slate (middle).
3. Clay slate proper (upper).

The *first rocks* are of a uniform argillaceous character, except where the veins and their *laminæ* of quartz diversify their aspect; or where igneous rocks change their textures. The colour is usually dark, the surface glossy, and the mass

---

* To be continued.

† See p. 630, *ante*.

‡ While we write, we perceive that the recent Ordnance survey has reduced the claim of Ben Macdui to be the highest mountain in Scotland, and restored Ben Nevis to its ancient supremacy.

* During the period of our visit a local geologist had discovered species of the *graphtolite* in Skiddaw slate. This fact will afford abundant materials for new generalizations of the clay slate groups.

† While stating thus the commonly accepted theories of the able authorities above cited, we may also add that there are chemico-physical investigators who account for the metamorphic rocks in a somewhat different manner.—Comp. Dr. Bischoff's Elements of Chem. and Physical Geology; Quarterly Journal of the Geological Society, &c.

irregularly laminated. They are more or less characterised by what is known as the slaty cleavage.

The boundaries of the district occupied by *middle slates* are on the north-west line from Egremont to Keswick. The face of the whole mass, as seen on Derwentwater, about Barrow, is a red mottled argillaceous rock, usually regarded as a breccia. The colour being considered accidental, we find similar brecciated structures and various grey tints among the rocks at the entrances of Borrowdale, around the north side of Grasmere, and other places. A close scrutiny of the circumstances under which the rocks are associated, suggests the idea of their being in part aggregates of volcanic mud and submarine streams of felspathic lava.

The *upper slates*, clay slate proper, or, rather, as they are termed, micaceous flags and slates, correspond in some parts of the series with the upper Ludlow slates and tile-stone beds of Shropshire and Caermarthenshire. In some places they yield excellent roofing-slates. As represented by the Kirby group, they somewhat resemble the flags of Llandeilo, in South Wales; or still more closely, as Professor Sedgwick has pointed out, the flags of Denbighshire, in North Wales.

This sketch will probably be sufficient to show that the economic geology of the district is chiefly concentrated in the groups of clay slate. It is these rocks which on disintegration yield the rich clayey soil of the valleys. From these rocks are also derived nearly the whole materials for building, from the pavement-flags to the roofing-slates; from the lintels and jambs to the rouble and the road metal. As to the analogous groups of fine-grained grey or green slaty rocks, as well as those porphyries which seem to be composed of indurated argillaceous matter, we must in the mean time refrain from describing them. But they are all to be referred in their geological classification to one or other of the above groups.

We strongly recommend all persons interested in the physical aspects of the country to take a ride up by Derwentwater, through Borrowdale. Thither we went, partly for the purpose of seeing that dreary valley (of which it may be mentioned that Earl Russell said, not long ago, that it was the most magnificent prospect in the district), partly to study the rocks, and also partly to inspect the village of Seathwaite, which, as we all know, is celebrated in modern story for its heavy rainfall. The first thing worth noticing is the waterfall at Lodore, which is chiefly remarkable for the enormous chasm that the water has worn through the rocks. After passing through "the Jaws of Borrowdale," as the entrance to the valley is not inappropriately termed, we ascend by one of the narrow and precipitous roads so common in the district to the quarry of Queyfoot, in which the "schistus" clay-slate is extensively worked, and altogether, it would seem, from the surface. From this quarry most of the buildings in Keswick and the neighbourhood are supplied. Further on we arrive at the celebrated "Bowder Stone," an immense block of basaltic green stone, which has evidently broken away from the overhanging cliff, and has been computed to weigh nearly 19,000 tons. Nearly opposite this "bowder," we observe the Castle Crag, famous as the site of a Roman fortification; and from this crag the view up Derwentwater, under a favourable aspect, is unapproachably beautiful. There is the calm and placid surface of the silent lake, the majestic hills which rise in graceful and irregular slopes on either side, the green islands, the projecting crags, the vapoury clouds, and the rich sunny hues,—

"That gild with yellow radiance all the vale."

Such a picture one seldom sees and long remembers. But, to turn again to Borrowdale, the geologist may easily observe the green mounds, covered with boulders of transported rocks, which mark the place where the glacier of a former period had melted away and deposited its burden. A more practised eye will also detect the surfaces of the *striated* and *polished* rocks, which record at once the character and the direction of a *force* which, as Agassiz has detected in our time, is still at work among the glaciers in the Alpine regions of Switzerland. After passing the pretty village of Rosthwaite, and the charming residence of Mr. Fisher, of Seatollar, we arrived at the head of the valley, at the village of Seathwaite. There are three phenomena to be observed here: first, the four magnificent yew-trees joined in one, commemorated by Wordsworth, in the lines beginning,—

"Fraternal four of Borrowdale;"

secondly, the celebrated lead mine, or plumbago mine, which lies right overhead, on the face of the hill; and, lastly, the rain-gauge. The yew-trees we saw; but the mine is not working at present; and unfortunately it did not rain that day, so that the respectable lady who makes the observations could not discourse of the rain-fall in operation. We learned, however, that for the last half-year it had been considerably under the average; and what is of greater consequence, that, although the greatest *quantity* of rain falls here in all England, there are many low-lying districts which are blessed with a far greater number of rainy days. We shall explain this paradox as we proceed.

In the year 1851, Mr. Otley, of Keswick, recorded a series of observations of local rain-fall from a rain-gauge kept near the town; and his results were highest in the year 1846, being 67·678 in.; lowest in the year 1844, being 40·629 in.; and on the average of ten years (1842-51), 57·162 in. About the same period, Mr. Millar, of Whitehaven, made an elaborate average of the principal stations in the Lake district, and a comparison of these averages with those of London, Edinburgh, Dublin, &c.; and from this computation we learn that while London was 24·800 in., Edinburgh 25·600 in., Dublin 30·087 in., Liverpool 34·700 in., and Manchester 37·300 in., the Lake district averaged respectively — Keswick, 57·162 in.; Great Gable, 89·400 in.; Styhead, 92·800 in.; Grasmere, 107·500 in.; and Leathwaite, 140·600 in. A still later average, quoted in one of the guide-books, gives us,—Keswick, 60 in.; Crummock, 85 in.; Ambleside, 82 in.; Kendal, 61 in.; and Troutbeck, 81 in. To these we will just add from our own observations, that in Keswick last year the rain-fall, as observed by Mr. Fisher Crosthwaite, was 71 in.; and in Seathwaite, in Borrowdale, the village we had the curiosity to go and see, 173 in.* It is highly proper to point out that, although there is more rain in the mountain districts than in low countries, there is also more brilliant weather. To quote the language of Dr. Leitch in the *Lancet*, "the rain comes down more heartily, and the weather clears up more cordially here than elsewhere."

The barometer has been very accurately observed in Keswick, and varies from 29 in. to 30 in. But we have not succeeded in procuring any trustworthy series of thermometrical returns. The temperature of the district, we should say, reasoning *à priori*, is lower in summer and higher in winter than any of the low-land districts. But we can speak from experience of the difference between noon and midnight, and more particularly of the difference between the temperature in the sun and in the shade, which latter, we imagine, is much greater than that of any other district in all England. For example, to pass from the direct action of the sun's rays on the side of a hill to the shadow of the neighbouring woods is something excessively like plunging into cold water on a very hot day. As to the force and direction of the wind, we regret that none of Admiral Fitzroy's nautical observers are stationed in the district: otherwise we might then compute the degree of force on Scawfell and Skiddaw of that Atlantic south-wester which carries with it all the moisture and deposits all the rain. But as it is, we can only state that the difference between the force of the wind on the surface of the lakes and on the tops of the mountains is so great as to bear comparison with the official idea of a calm breeze and a storm. We have just room to add here, that the county of Cumberland is deficient in ozone. Of the tabulated returns from fifty-four meteorological stations in the last quarterly return of the Registrar-general, Cockermouth and Carlisle stand lowest in the scale.

We must finish these dry statistics with a few physiological remarks. In the first place, with regard to the climate of the lake district, we may observe that from its altitude, its peculiar topography, its exposure to the great atmospheric current of the Atlantic Ocean, its exuberant vegetation, and its clayey soil, it is necessarily the most humid atmosphere in all England. Accordingly we might be prepared to find a preponderance of those diseases which are peculiar to an alpine country; and in this case we should not be altogether disappointed. The late Jonathan Otley, whom we have mentioned, relates that when he was a boy (about the period of Dalton's observations) *ague* was so common in the vale of Keswick, that every country lad coming to service from the low country had to go through a fit of "shaking" which lasted six weeks! An old shepherd whom we met on the hills in Borrowdale, informed us that there was plenty of ague, accompanied by fever, in his youth. And although there was nothing of that sort now, there was still plenty of rheumatism, as he happened to know! Although cases of goître are now exceedingly rare, these were by no means uncommon twenty or thirty years ago; and even yet, we were informed, a swelling of the glands of the neck is not an unfrequent malady. Colds, inflammation of the lungs, phthisis, and all the diseases which arise from excess of moisture and exposure to low and changing temperature, are of course more or less abundant. And it is impossible for the stranger fresh from the rural districts of Essex or Hampshire not to perceive that, when compared with the ruddy complexions of the Southern peasantry, the labouring people are, as it were, blanched and etiolated. Although the death-rate of Cumberland is lower than that of England and Wales (21), yet when we consider its sparse population it is relatively high. As far as our limited means of observation served us, we never saw a population among the lower classes so temperate and frugal in their habits. Indeed, it occurred to us once or twice, that they possibly "err on the safe side" in this direction; since we could scarcely conceive of a district in which a proper allowance of good cheer would be attended with so beneficial an effect. Their cottages are rapidly improving in construction, through the spirited competition of the landed proprietors. But there are still too many of the old-fashioned, diminutive, ill-lighted, and uncomfortable habitations in the district. Some of the farm-houses are even worse off than the labourers' cottages. A great many in the neighbourhood of Bassenthwaite and Threlkeld bear on their antique lintels dates varying from 1668 to 1724; and are constructed on the ground-floors with low oblong lattices, and in the upper rooms, with openings about 2½ ft. square. It is strange, in a climate where sunlight is so valuable, that it should be often so persistently shut out! For the rest there is plenty of fresh air and pure water in the district; and were it not for the natural drawbacks we have referred to, one could scarcely imagine "a better land," as Mrs. Heman sings. But even in these natural circumstances it is pleasing to report a gradual and silent improvement. The snow in winter no longer lies six months on the hills: it is seldom more than two, and never exceeds three even at the greatest altitudes. Sometimes in a mild winter there is no snow seen on the hills at all. The steady progress of agriculture, and particularly of the drainage of the land, has exercised a prodigious influence in clearing the valleys of surplus water. And the rain-fall, it must be observed, is decreasing, except at one or two remote heights. Whether it be that the principle of amelioration which originally reduced the horrible terrestrial convulsions which we see around to an equipoise, and produced those scenes of beauty and grandeur, which we all admire, from their very ashes;—whether this principle is still at work, it would be difficult and perhaps impossible to decide: but there cannot be a shadow of doubt that, from whatever cause, the lakes are rising perceptibly in the necessary conditions of public health.

Our next and concluding article will be devoted to Keswick.

* Those who wish to pursue this subject ought to consult an able monograph "Essay on the Meteorology of the Lake District." By J. F. Millar, Esq. London. 4to. 1859.

DRINKING FOUNTAIN IN MARYLEBONE.

A SIMPLE but not inelegant drinking-fountain, designed by Mr. H. Burton, and executed by Messrs. Purves & Norton, has been erected in Oxford-street, at the end of Marylebone-lane. The fountain, of Sicilian marble, and 5 ft. 6 in. in height, consists of a pillar with four sunk panels in it, with a pilaster between each, supporting a circular basin, about 3 ft. in diameter, in which is a pedestal, surmounted with an antique urn in Jeune Fleuri marble. An inscription around the basin declares very loudly that it is the gift of "David Salomons, Esq., Alderman and M.P."

We have been told,—

"Who builds a church to God, and not to fame,
Will never mark the marble with his name."

It seems to be different in fountains.

THE CATHEDRAL OF FLORENCE.

NEW interest attaches to the Cathedral of Florence now that it has become the object of an undertaking to rank among the greatest in the annals of modern Italian architecture. We have just been visiting the exhibition of the designs (forty in number), submitted last year to the committee of judges for the façade of this magnificent church, so long left discreditably unfinished. Only eleven of these designs are displayed with names attached to them; and of the artists thus made known, two only, a German and a Dane, are of countries beyond the Alps. One, a Florentine named Falcini, exhibits two, in many respects differing from each other; and the German competitor, Sommer, is the only one who completely sets aside all precedents and ideas of the Italian-Gothic, in a bold attempt to reconcile the Renaissance with the grand old style of Arnolfo and Brunelleschi. Generally speaking, the Italian artists, as here expressing themselves (their drawings, for the most part, highly finished in water-colours), luxuriate in a profusion of tracery, moulding, arcade galleries, canopies, pinnacles, and sculptured details, even beyond the precedents of any form peculiar to the Mediæval or other sacred architecture of this country; and we might describe as the characteristics of their creations in this exhibited series, an almost fairy-like magnificence, a gorgeous ideality that sometimes sacrifices the majesty of leading forms to the elaborate beauty of detail. In some designs we see the proposed elevation overloaded with sculptures, statues, and reliefs, with motives usually borrowed from the great classics of Italian art, from the Medici monuments, or others by Michelangelo. Besides statues of apostles and prophets, are introduced, in one instance, several figures in high relief, along the basement story, of national celebrities in art, letters, and arms, Dante and Galileo being conspicuous. In other designs ample fields are appropriated to mosaic, illustrating evangelic, or (more frequently) legendary and mystic subjects, as the oft-repeated Assumption and Coronation of the Virgin; so more than duly prominent, indeed, is Mary's figure, in several compositions, that one might object against the apparent purpose of representing *her* as the supreme centre, the being to whose worship the great temple is mainly dedicate,—a want of just religious feeling happily protested against by other artists among these competitors, who have given that chief place in the groupings of sculpture or mosaic to such nobler subjects as the Resurrection and Ascension, or the Saviour enthroned amidst adoring angels. In the mosaic groups also, alike with the sculptures, we recognise the motives of well-known works by Italy's great ones,—Titian, Raffaelle, Correggio. Though in all examples save one, the leading features are in accordance with the Italian-Gothic, and harmony between the old and new appears studiously aimed at, but few of these designs—only one of those with names affixed—propose what is assuredly the most appropriate finish to such an elevation, the gable summit for each of the three sections into which this façade is naturally directed, correspondent to the church's nave, lateral aisles, and portals. Several artists, indeed, propose such a gable summit as the central feature, above the roofing of the highest part, with sloping or horizontal summits to the lower sections, or aisles. One, disregarding the obvious harmony between the gable form and the ancient roofing, proposes three summits, a loftier central to two lower, *each* with horizontal termination.

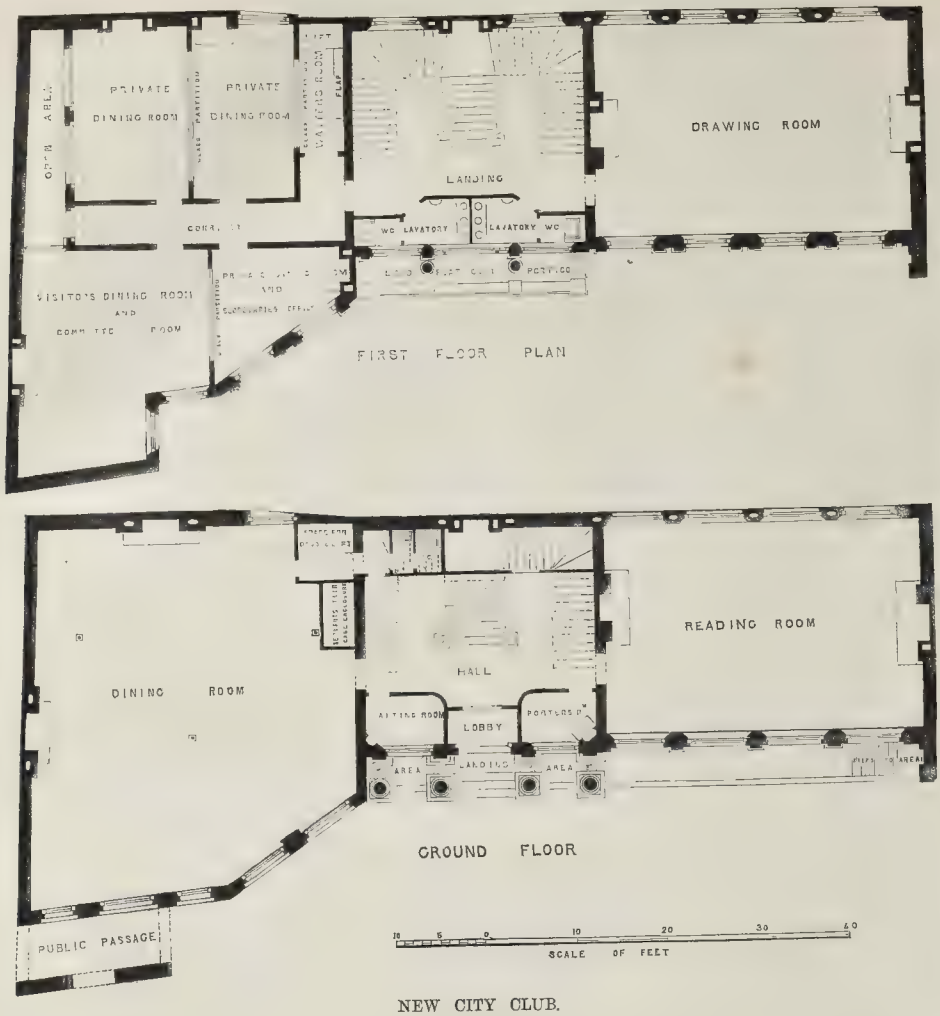
Grandest among the ideas here manifested (though perhaps least practicable) is that of the artist who suggests *another* Campanile, the counterpart of Giotto's superb creation, at the opposite angle, united with the latter by a long horizontally-terminating front, with a gable-headed centre rising a little higher. From Giotto, indeed, many, and some of the best, details have been borrowed, with more or less exactness, in several of the designs; and the richly-varied ornamentation of portals and windows in Arnolfo's building have been, in many instances, almost copied from the lateral for the proposed front elevation of this cathedral. In their aggregate, these designs afford gratifying proof of the reawakened interest and studious consideration for a style of architecture long neglected in this country; and we may hail with pleasure such guarantee of an intelligent revival of the Tuscan Gothic. The report of the committee (ably drawn up by the secretary, Signor Guasti) divides all the works presented for this competition into three classes: *pendentive* façades, *i.e.*, with summits sloping in accordance with the inclined plane of the church's roofs: mono-cuspidal, and tri-cuspidal façades; and, while announcing that none were deemed worthy of the highest prizes—three prizes of such category, 10,080fr., 8,400fr., and 6,720fr. having been offered,—it signalizes three as alike entitled to the second prize, 1,680 fr., and six others as claiming equal share in the third, 1,120 fr., which the committee recommend should be distributed in equal portions among the artists of those designs. Out of forty presented, only sixteen are found worthy of being noticed in the report. Others are set aside with unqualified censure. The Renaissance project of the German is criticized, but pronounced unsuitable. Another is condemned on grounds that curiously display Italian feeling on the question here at issue, "because too decidedly partaking of the acute-arched Northern Gothic,"—a style, indeed, justly rejected in the application now considered. But one more claimant is to be remembered, in regard to whom we believe public opinion in Florence would be ready to declare, "the greatest is behind,"—the Chev. Matas, who has won deserved renown by the façade of S. Croce (his adaptation from an ancient design); that esteemed architect having presented a model for the cathedral-front so long since as 1842, which met with general applause, and created favourable impressions, inducing no fewer than eighty persons of pecuniary means to pledge their contributions on condition that this—and this only—should be the design ultimately carried out for completing this magnificent temple. Contented, it seems, with such suffrages, Matas has not chosen to enter the lists a second time; but can the committee reasonably expect to see his project, as well as all those of more recently-engaged competitors, surpassed by any one of the ten architects nominated for the honours of a final trial, the efforts of whose results are to be pronounced upon in September next?

THE ALBERT MEMORIAL AT PERTH.

HER MAJESTY went to Perth on Tuesday last, accompanied by some members of the Royal Family, and inaugurated the Albert Statue on the Inch, or Green, at Perth. She also knighted Lord Provost Ross, and then immediately left for Balmoral.

The statue was executed by Mr. Brodie, of Edinburgh. The material is Redhall freestone. The figure is 9 ft. in height, and the robe is that worn by the Prince when attired as a knight of the Ancient Order of the Thistle; the dress is the doublet and trunk-hose of the old Scottish court; and the figure bears not only the insignia of the Scottish, but also of the great English, order of knighthood, the garter being worn the below left knee. The right hand rests on a square column or pedestal, and holds an open scroll, on which the outlines of the Exhibition building of 1851 may be traced. The figure is set upon a pedestal 13 ft. high, making the whole height 22 ft.

Her Majesty was welcomed during her progress through the city with the greatest possible enthusiasm. A stand in front of the statue was erected for her Majesty. It was designed by Mr. Heiton, architect, and had a groined ceiling, with three arches embellished with evergreens and flowers. The central one was appropriated to her Majesty, and consisted of four shafts with floral capitals. The stand was covered with crimson cloth, and fitted with curtains in case of rain. A handsome drawing-room chair, made of walnut-wood, and covered with crimson velvet, with the royal arms on the back, was prepared for her Majesty by Mr. G. Scott, cabinet-maker. A stand, capable of holding 500 persons, was erected at a short distance from the statue for the subscribers to it of a guinea and upwards. The statue is surrounded by a malleable iron railing, consisting of stars and crosses, with floral balustrades.



VALUE OF LAND IN THE CITY.—Two freehold houses, on the south side of Old Broad-street, London, were sold by Mr. Henry Marsh, on the 25th ult. The property is held for a term which will expire at Michaelmas, 1872, at the annual rent of 78*l.* 12*s.* 6*d.*, and yet realized 23,500*l.*, being at the rate of about 300,000*l.* per acre, or 560*l.* per foot frontage.

NEW BRIDGES.

The Trent Bridge at Wilford. — This bridge will be of stone and iron. The central portion consists of three large arches, of which the middle one is 100 ft. span, and the two side ones 85 ft. each. There are ten land arches, five at each side, of 18 ft., 17 ft., 16 ft., 15 ft., and 14 ft. span respectively—the two widest being those next the water. The works have so far progressed that it is probable before long the day will be fixed for laying the foundation-stone. A temporary foot-bridge will shortly be erected on the gearing for the main structure. The piles are now being driven for the foundations of the bridge, and when the gravel and soil inside them have been removed, blocks of brick and cement will be carried up to within 3 ft. 3 in. of the summer water-level. The superstructure of the piers will be Cromford stone from the Duke's quarries, and the blocks which surmount the piers, and from which the arches spring, will be about 12 ft. from the brick foundation and about 9 ft. from the summer level of the river. The two land arches nearest the water will have inverts; and beneath the water arch on the Nottingham side is the towing-path for the Trent Navigation Company's boats. A hexagonal toll-house will be erected at the Nottingham side of the bridge. The roadway over the river will be supported by iron girders connected with iron plates. It will be 34 ft. 4 in. in the clear, and will be divided into a carriage-way of 21 ft. wide, and two side-paths for foot passengers of 6 ft. 6 in. each. The balustrades will be also of iron. The engineer is Mr. Mylne, F.R.S., of London and Edinburgh; and Mr. Buxton is the contractor.

The Rixton and Warburton Bridge.—The first stone of the new bridge which is to connect the counties of Lancashire and Cheshire, near Warburton Church, and about half a mile from Hollins Green, has been laid by Captain Withington, of Culcheth Hall, amidst great demonstrations of rejoicing. The structure is promoted by a joint-stock company called the Rixton and Warburton Bridge Company, Limited; and it will be maintained by toll -equivalent to that now charged at the ferry. The bridge will be of iron, with stone abutments, and will cross the river in one large span of 130 ft., and 30 ft. 6 in. above the average flow of the river. There will be 28 ft. roadway betwixt the battlements, four girders in width, with transverse girders at proportionate distances, bolted together and covered with diagonal planks (creosoted). The abutments will be of Bolton stone, and that on the Rixton side will be constructed with a flood culvert to allow the flood waters to escape. The fencing of the bridge will be of cast iron, 4 ft. 6 in. high. The bridge will be approached by an intended new road, 10 yards wide, from the Warrington and Manchester turnpike road, at a point within 500 yards from Hollins Green, and terminating on the Cheshire side at Warburton Cross, and within a very short distance of the thriving towns of Altrincham, Bowdon, Knutsford, Lymm, &c. Mr. B. P. Coxton is the engineer, Mr. R. G. Brierley, assistant engineer, and Mr. A. Pilling, of Bolton, is the contractor. The cost will be under 4,500*l.*

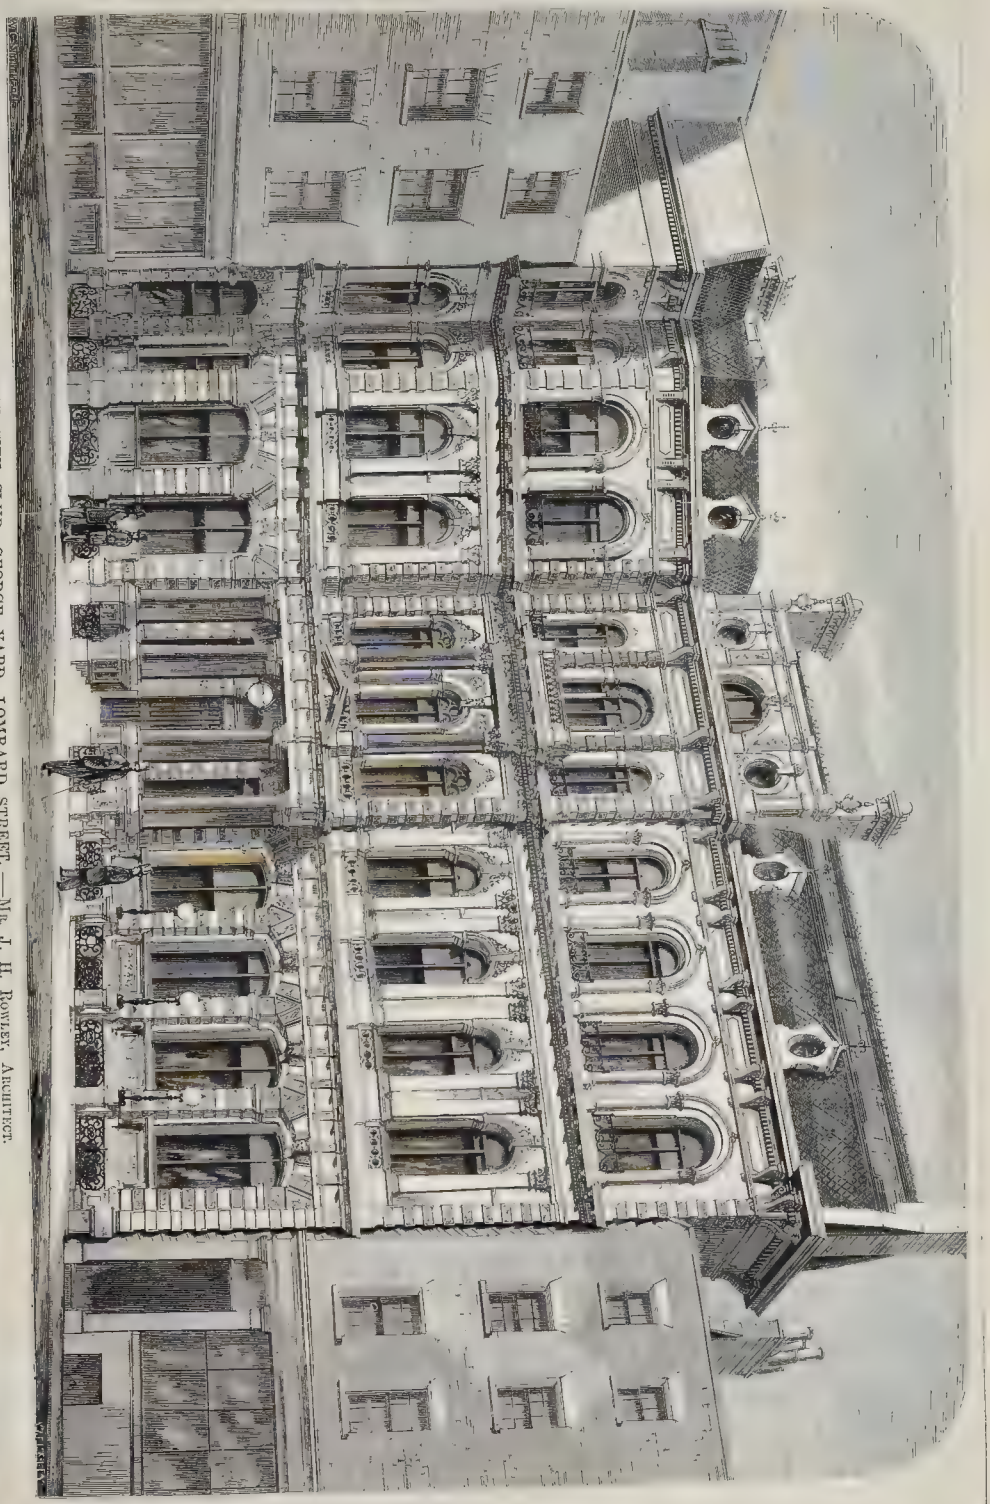
Opening of the Salford Bridge. — The new bridge over the Irwell, erected by the Salford corporation, out of funds awarded to them from the Lancashire and Yorkshire Railway Company, has been opened to the public, who assembled in large numbers to witness the ceremonial. The new bridge is peculiar, but not very elegant in form—a circumstance that is attributed to the difficulties with which the corporation have had to deal in regard to the land on the Salford side of the river, involving a saving of 1,600*l.* The consequence is, that the bridge — a cast-iron structure, in one span—is in the form of a trapezium, with an area of 1,150 yards. It consists of twelve wrought-iron girders, resting upon stone abutments, and supporting twenty transverse floor-joists 4 ft. apart, that sustain the curved iron plates upon which the roadway is formed. The main girders are 9 ft. in depth. The pierced cast-iron parapet is 4 ft. 9 in. in height from the roadway; but the parapet, roadway, joists, and girders give a total depth to the sides of the bridge, as seen from the river, of 15 ft. From the centre of the new structure to Victoria Bridge the distance is 426 ft., and to Waterloo Bridge, on the other side, 838 ft. The contractors for the iron work were Messrs. W. & J. Galloway & Sons, of Manchester; and the contractor for the roadway and masonry was Mr. Abraham Pilling, of Bolton. The cost of

NEW CITY CLUB.

the entire structure, including the approaches and abutments, has been about 20,000*l.*

Clifton Suspension Bridge.—The report of the directors at the seventh half-yearly ordinary meeting of the company states that Messrs. Hawkshaw & Barlow, the engineers, report as follows: "Since our last report great progress has been made towards the completion of the bridge. The main chains with the suspension rods, longitudinal girders, and roadway girders have been completed: the flooring of the roadway and the hand railing are in a forward state: the building of the toll-houses has been commenced: and, though there are yet many details which, in a work of this magnitude, require much care and consideration, yet there is every reason to expect that the bridge will be ready for traffic in the month of October." Looking at it on Tuesday last there seemed to be little needed to fit the bridge itself for traffic.

NEW CITY CLUB.



THIS new Club-house is now being erected in George-yard, Lombard-street, from the designs of Mr. J. H. Rowley, architect. The front is of Portland stone, and the centre displays polished red granite columns and pilasters.

The frontage in George-yard is upwards of 100 ft.; and there is also an additional frontage in Bell-yard, Gracechurch-street.

The Club-house is approached from George-yard through a Doric portico and vestibule, with granite columns and pilasters, and is enriched with appropriate carving. Entering the vestibule and entrance-hall, which is paved with tesselated paving, on the right-hand is the reading-room, 35 ft. by 24 ft.; and, on the left, the dining-saloon, 45 ft. by 35 ft. In the hall are the porter's rooms, waiting and cloak rooms, conveniently arranged. This floor is 20 ft. in height. The windows are segmental headed, and in the front have key-stones carved with representations of some of the heathen deities: the piers between are rusticated, and have Doric cappings: above comes a Doric cornice, running along the whole front.

A staircase of stone, with ornamental iron balusters, starts from the hall, and is continued to every floor: it is lighted by a large glass dome. On the first floor, above the reading-room, is the drawing-room. There are four private dining-rooms, 19 ft. by 13 ft. each, with a visitors' dining-room, committee-room, and secretary's office. This floor is 18 ft. in height. The windows are semicircular headed, with carved key-stones on the exterior, and clusters of carved fruits and flowers on either side, over the architraves. There are coupled Corinthian pilasters between the windows, with an enriched frieze and cornice above. On each floor there are lavatories and "closets."

The large smoking-room is above the drawing-room, while on the other side of the landing are three billiard-rooms, lighted by glass lanterns, and a card-room. This floor is 16 ft. in height. The windows are semicircular headed, with columns on either side, and architrave mouldings: an enriched cornice, with carved consoles, is carried along the front over these windows, with a sunk panelled frieze. On the third floor are dressing-rooms, bath-rooms, &c. The basement contains cellars, the kitchen, and other necessary offices, fitted up with modern improvements, and fire-proof. The walls and ceilings are all lined with white tiling. Endeavours have been made to prevent the smell from the kitchen pervading any part of the building. The lighting of the principal rooms will be carried out by means of Strode's patent sunlight burners. Each floor has its own lift from the basement. The awkward shape of the site called for some ingenuity on the part of the architect in planning. The amount of the contract is 19,000*l.*; and Messrs. Myers & Sons, of Lambeth, are the builders.

NEW CITY CLUB, GEORGE YARD, LOMBARD STREET.—MR. J. H. ROWLEY, ARCHITECT.

THE WORKMEN'S INDUSTRIAL EXHIBITIONS.

THE Space Committee of the North of London Exhibition report that they have received applications for space from 160 intending exhibitors, representing not less than 400 different objects. Of these the committee report favourably. A large number consist of interesting and ingenious productions, calculated, they believe, to render the exhibition attractive and entertaining. Up to the present time comparatively few articles have been offered as specimens of skilled workmanship. Most working men, as we have said, occupy their leisure time in the production of articles having no connexion with their trade; and these examples of industry and ingenuity will, no doubt, form the largest and most interesting portion of the exhibition. The committee have already granted space to forty exhibitors, and communicated with each one by letter. Previously to awarding space they have in most cases made personal visits to view the objects. The committee submit the following classification to the Central Committee:—Class 1, skilled workmanship; class 2, amateur workmanship; class 3, invention; class 4, mechanical models; class 5, ornamental models, &c.; class 6, artistic objects; class 7, ladies' work. The report has been adopted. Popular concerts are to be given in the Agricultural Hall, Islington, in connexion with the Exhibition.

For the East London Industrial Exhibition, between one and two hundred exhibitors have given in their names. The great obstacle in the way of the committee is the finding a place for the purposes of the Exhibition. One of the means by which they are attempting to carry it is, by the establishment of a guarantee fund; but they find a difficulty, even with a large guarantee fund, in securing any building fitting for the object. The idea of the erection of a building specially for the purpose is out of the question. Among the patrons of the project are Lord Ebury, Mr. Hanbury, M.P., and Mr. Buxton, M.P.

PERILS OF WELL SINKING.

AT Falkirk, a melancholy accident, whereby one man was killed and four others were more or less severely injured, has occurred on the premises of Messrs. J. Aitken & Co., of the Falkirk Brewery Company, where a new well was being sunk. The boring of the well was intrusted to Mr. William Borland, and the building of the interior brickwork to Mr. William Hume, builder, Falkirk. The depth of the well was 35 ft., and the additional bore extended to 150 ft. The building of the interior brick wall, the diameter of which was 4 ft. 6 in., commenced some time ago, and its height extended to 28 ft. It was found, however, to be insufficient, and it was resolved to sink it 7 ft. further; and this was attempted to be accomplished by excavating to that extent under the wall, with the view of building the extra 7 ft. beneath the portion already built. Messrs. Hume and Borland descended the shaft, accompanied by James Morrison, mason, and James Laurie, labourer; and shortly after they had commenced work the arched wall gave way, and they were enveloped in a mass of falling bricks. Numbers of experienced workmen proceeded to the spot to aid in extricating the sufferers. Laurie was first got out, and was found to be severely injured; and Borland, who was cut about the head and bruised on the back, was next brought to the surface. A number of willing men then ventured further down in the bucket, and succeeded in rescuing Morrison, who was buried up to the waist amidst the *débris*. Amongst the number who descended was Mr. Henry Hume, son of Mr. Hume, who was the first to discover that his father was dead, and the son was himself severely cut on the head when he was down by an additional fall of bricks. He was removed home with his skull almost fractured. His father's body was not recovered for some hours afterwards.

An accident of a similar kind, also terminating in loss of life, has just held the population of Sallamanches (Haute-Savoie) in a state of painful suspense for nearly four days. A well-sinker, named Périer, was being let down into an old well nearly 60 ft. deep, for the purpose of effecting some repairs, and had already reached within a short distance of the bottom, when a stone at the side, on which he had for a moment placed his foot, gave way and brought with it the whole of the masonry work lining the sides of the shaft. After about fourteen hours' labour, nearly 20 ft. of the stones and rubbish were removed, and the voice of the unfortunate man could be heard. Two mornings after, the removal of the rubbish was so far advanced that the workers had reached to within 6 ft. of Périer, and some broth was passed to him through an elastic tube. The work had, however, now become more dangerous. Twice the shoring partially gave way, and the clearing out of the materials had to be recommenced. On the evening of the next day the labourers in the well called out that the unfortunate man was at length reached, and at the same time asked for a cord to be let down, in order to draw him to the surface. Another moment and he would have been rescued, but the sides once more gave way, the man again disappearing beneath the stones. Three hours later the rubbish had been cleared away from Périer's head and shoulders, but it was now too late, as he had died from suffocation, after remaining buried alive and uninjured for eighty-six hours.

SOME HINTS FROM OVER THE WATER.

THE electric telegraph is yet but in the infancy of its usefulness in the metropolis, and other large towns; but the day will come when among all classes this marvellous agent of progress will be as much in use as the present penny-post. We require in London some such genius as Rowland Hill, who would in this way promote cheapness and swiftness. At present the way in which telegraphic messages are delivered in the large towns is much to be complained of. In London, for instance, while we see the rapid rate at which newsmen's carts pass, and also those of the Parcels' Delivery Company, even Pickford's and other railway vans moving with rapidity,—on the contrary, the telegraph boy who may be in charge of a message which has been flashed in no time from Holland, or Edinburgh, or Glasgow, crawls through the streets at a snail-pace. In France they are likely to manage better; and it is to be hoped that the example will not be without its use. In Paris they are to have fifty telegraphic messengers throughout that capital, warranted to deliver messages at the most distant part of the metropolis within half an hour. The Paris correspondent of the *Daily Telegraph* says,—"Thirty-five stations are to be devoted to this service, as the French detest writing notes. I predict that this will be a very popular and paying institution. Why? A commissionnaire—the usual agent of Paris communication—costs 75 centimes; and the 'chasseur' of a restaurant looks twice at a franc."

ART-WORKS IN DENMARK.

MY countrymen and I were highly pleased when reading your report of the remarks made by the Rev. J. M. Neale, on the Influence of Local Scenery on Architecture; and we were particularly gratified with the remarks made about the many lovely spots on which churches are erected in Denmark. I beg, through the medium of your widely-circulated periodical, to draw the attention of English artists and connoisseurs (according to Danish notions, architects count among artists) to the rich and comparatively unexplored art-treasures found in Denmark. As Mr. Neale particularly observes, the Mediæval builders of Denmark had to construct their edifices of bricks only; and although many fine brick churches have been destroyed, there still remains a large number of elaborate brick exteriors, well worth studying, now that stucco is becoming obsolete, and that people wish their brick houses to look like brick houses, and to be handsome brick houses. The oldest noteworthy Danish brick church is the Byzantine or Lombardic cathedral of Roeskilde, that is found depicted in "Fergusson's Handbook of Architecture," and that is now being restored to its original form as much as possible, without destroying later and equally remarkable additions. Of later brick churches I may mention St. Canute's Church, at Odense, that has a very imposing interior, although the effect is sadly marred by an unaccountable lot of suspicious pews, monuments and pictures of all materials and from all periods projecting into the nave. The Cathedral of Aarhems is another internally magnificent brick church; and other large churches are found at Maribo, Aalborg, Ribe, Schleswig, and many other towns; and besides these cathedrals, there are in every town and in most villages Mediæval brick churches of rather stereotype form, inasmuch as the eastern chancel end is always square, with a toothed gable, and the western end invariably is flanked by a square tower, with a high-pitched roof, and two toothed gables; but such an astonishing variety is displayed in the designs, that a whole volume could be compiled of them, and such a volume would form a valuable manual of plain but effective brick architecture. There is another respect in which Denmark presents a wide and new field for art-study, viz., that of wood-carving. A number of splendidly carved reredoses are preserved in the Museum for Northern Antiquities in Copenhagen; but a much larger number of these altar-backgrounds, as the Danes call them, is found scattered about in the churches of small towns and villages, where they remained unheeded by travellers and tourists, but forming the pride of the parishioners, who everywhere are fully alive to the beauty and importance of these memorials of bygone times. For information with regard to both churches and their contents, I would refer your readers to Trap's "Topographiske Beskrivelse af Kongeriget Danmark" (Topographical Description of the Kingdom of Denmark) which was published three or four years ago. In this voluminous work will be found the most minute information as to all churches, and furniture and monuments in and about all churches, throughout Denmark. If a gentleman who understands Danish would undertake to publish a catalogue of churches pointed out in the above-named book as being noteworthy, he would confer a lasting benefit on the daily increasing artistic travelling public of England. And it is not only the ancient brick architecture of Denmark that is deserving of notice; but lately a considerable number of large public buildings, with brick-front elevations, have been erected, such as the University Library, the Asylum for the Blind, and St. John's Church, all in Copenhagen, and the new town-hall in Elsinore. These four buildings are each in a distinct style, and yet, every one of them is widely different from any brick building that has lately been executed in Great Britain, so far as an Australian can judge from the illustrated periodicals and magazines, scores of which are always found on the tables of our mechanics' institutes and libraries. The above-mentioned town of Elsinore presents many interesting features to the architectural student. It possesses two Mediæval brick churches, the largest of which is dedicated to St. Olave, and is adorned externally by four different brick gables, and internally by a gorgeous reredos, about 40 ft. high, carved in oak, and gilt throughout. The other church, now called Sta. Maria, was formerly a Grey Friars' convent church, and the whole of the ancient convent buildings, with cloisters, refectory, and other appendages, are yet completely preserved, and used as a benevolent institution. About ten minutes' walk from the town is the Elizabethan castle of Kronborg, a large three-storied pile of Swedish sandstone, with a splendid Corinthian portico; a gable with five orders of columns, freely treated, above each other; and a dazzling chapel, lately restored. Half a mile from Elsinore is the pretty royal villa, Marienlyst, where a striking example of the effect of local scenery on architecture, or rather the adaptation of architecture to local scenery, may be observed. The villa, now converted into an hotel for a watering-place, is an unpretending three-storied building, in the Italian style, and situate on the slope of a hill. On both sides of the building symmetric walks conduct in zigzag to the top of the hill, that has been formed into three distinct hills with intervening gullies, spanned by wooden bridges. The whole is crowned by rows of tall chestnut-trees; and forms, when seen from below, a most lovely picture, which is further enlivened by the immediate proximity of the Sound, with its myriads of ships going into or coming from the Baltic. The above-mentioned Museum of Northern antiquities contains also an inexhaustible store of designs for goldsmiths' work, such as drinking-horns, cups, bracelets, earrings, brooches, and other ornaments, which are constantly being dug out of the many swamps and marshes of Denmark, and which always are conscientiously forwarded to the Museum authorities, who refund the metal value to the lucky finder. But it would be to trespass too much on the space of your valuable paper to enumerate all the art treasures in Copenhagen; and I therefore beg to conclude by expressing the hope that these remarks may induce some artists and amateurs to take due notice of the treasures

found in Denmark, and to investigate them for the permanent benefit of artistic development throughout the universe.

Ballarat. A DANE IN AUSTRALIA.

THE TOWER OF ST. NICHOLAS'S CHURCH, NEWCASTLE-ON-TYNE.

IT is with extreme regret that I read in the *Builder* of last week an account of the dangerous condition in which this beautiful structure has been placed by a heavy storm, which has rendered it necessary for its safety to expend, as Mr. Dobson, architect, estimates, a sum of 1,200*l.* or 1,400*l.*—a small amount, taking into consideration the wealth and prosperity of the town and neighbourhood, and that the tower and lantern of this church are the architectural pearl of the place, and the pride of all the district round. The lightness, elegance, and symmetry of the lantern can only be appreciated by those who have seen it. The tower of the church of St. Dunstan-in-the-East, London, has often been compared with the chief parish church of Newcastle-on-Tyne; but no one who has seen the two will for a moment consider this comparison as truthful, for the belfry is totally different in form, proportion, and construction from that at Newcastle-on-Tyne.* There are many fine spires and church towers in England. Some of the towers are surmounted by lanterns, but there are none of them to be compared to that on St. Nicholas's Church; and notwithstanding that the writer has had opportunities of studying delineations of the chief ecclesiastical structures in Europe, he has found nothing at all resembling this building, the dangerous condition of which so many deplore. The lantern at Edinburgh forms a fine massive crown, but it wants the refined elegance of the lantern at Newcastle.

That it is possible to allow this object to remain in danger for a single week for the consideration of money is remarkable; but such seems to be the fact; for although the town-council, as you report, have agreed to give 500*l.* towards the restoration, the parish of St. Nicholas refused to give a single penny. I have been for many years away from coally Tyne; but when I picture this fine tower, as I often do, in my mind's eye, it affords a real pleasure, and which is greatly enhanced when an opportunity occasionally is afforded of getting an actual peep at it.

This belfry has been exposed to many dangers: amongst others, tradition says, that when the Scotch were besieging the town they threatened to demolish the lantern and tower with their cannon: upon this the town authorities hoisted several renowned Scottish prisoners into this airy situation, and by that means the tower was at this time saved.

Thirty years, or it may be more ago, as has been already mentioned in the *Builder*, the tower had become much out of the perpendicular, and would have fallen altogether but that Mr. Dobson was called in, who pinned up this enormous mass of stonework, removed the old and decayed foundation, and set the structure straight again. At this time the tower underwent a general repair; large masses of the casing were removed, and replaced with new work; the springing of the lantern was attended to, and some of the pinnacles entirely removed and replaced with new ones; and most people of the coaling district hoped that their famous church would stand for many a hundred years to come. Under the circumstances, it is very important that we should have some scientific reason for this fresh indication of decay; and in the absence of this I will remark, in a common-sense way, that the stones of which the tower is built are of small size,—in fact, some country people, and even those in the town, believe, on this account, that it was erected by a company of little men called the Picts; and say that the figures,—one of which is placed at each corner of the top of the tower, and which look very little in consequence of the height at which they are placed from the ground,—are effigies of the original masons. Ridiculous as this is, it causes some to ask if these small stones, and the other means of facing—inside and outside—are sufficient to support the rubble with which the inner part of the walls seems to be filled. Moreover, the church stands upon a platform which descends, on one side especially, by a tremendously steep gradient towards the river; and all about this neighbourhood numbers of very old houses have been removed to make way for the high-level bridge. Is it likely that this may have caused the ground on which the church is built to shift in some degree?

But there is one thing to which more than the above causes mischief is to be attributed: this is the vibration of the great bell—called the "Major," in consequence of its having been left, by will, by the late Major Anderson, to be placed in the tower of this church for the use of the townspeople. This is a large bell, which has an exceedingly deep and solemn sound. Often when the writer has been in the church and belfry he has noticed the tremulous effect on the stonework caused by the striking of the hours upon the "Major;" and there can be no doubt that this action going on year after year must, as a natural consequence, impair any structure. It is therefore suggested, that until needful repairs be made, the "Major" should be mute.

But surely in Newcastle and the neighbourhood this need not be for long; indeed, it would be a disgrace if even the parish of St. Nicholas alone did not raise the needful fund: surely there is not one in ten who would refuse, if it should be necessary, to support a church-rate for this purpose. The parishioners ought to feel a pride in being the custodians of, and doing their duty to, this fine example of architectural skill. It would be a sad thing for the parish of St. Nicholas to be twitted as Banbury was formerly, with "having a church, but not a steeple."

A NEWCASTLE-ON-TYNE MAN.

* There is a very fair engraving of this tower in an earlier volume of the *Builder*.

MAYFIELD ABBEY, SUSSEX.

SIR,—The old abbey at Mayfield is being restored by Mr. Pugin, but it requires your attention. I saw a brick arch about to be stuccoed, and I have serious fears, from what I observed, that this piece of truly English architecture is about to be transformed into quasi-French Gothic, a vandalism I conceive rather worse than any other. A. W. TAYLOR.

WHICH IS THE HARVEST MOON?

IN our grandfathers' day, in ordinary seasons, the corn-harvests throughout England were much later in the year than they are at present; and so marked has become the change, that it fairly comes to be a question whether the moon of August or that of September, strictly and properly speaking, should be considered as the "harvest moon." In the years gone by, the last-named month, throughout the chief part of this country, was generally the time when the grain was gathered in; but now, improved drainage, a better system of husbandry, the scientific and more extensive application of manure, &c., have greatly hastened the ripening of the crops; so that by the time the month of August has ended, the chief part of the English grain is safe in the barns and stack-yards. In the present year this is particularly to be noted; and, during September, if the weather continue favourable, the late richly-covered fields will be lying in stubble, and the labour of the reaper at an end. It seems, therefore, that in England the moon of August should now be considered that of the harvest; but whichever way this may be determined, the moon-light of both of those months, in eight out of ten instances, is delightful,—especially so to the artistic eye, and particularly when

"The moon, sweet mistress of the night,"

is about the full: then she makes rare pictures, and shines with her silvery solemn light into cathedrals and churches, showing up many a rare sculpture and device, and glinting upon tombs and memorials of old-world days: she peeps also into quaint burial-grounds, and makes the shadows of the black yew-trees and elms wander amongst the graves, and silvers the grey lichen-covered walls: she shows with a mysterious charm the architectural outlines and features of ancient mansions; peeps into armouries, picture-galleries, and into curious chambers, dimly showing the tapestry and grotesquely-carved furnishings.

In many brooks, in lakes, and on the sea, the reflection of the harvest-moon is seen in wonderful brightness; and in the woods and forests the combinations of rocks and foliage form Rembrandtish and ever-changing pictures; nor are the snug farmhouses, the crowded stack-yards, and the rural cottages, to be passed over without notice; and even in the meadows and places which in the daytime present but an ordinary aspect, the peaceful subdued light of the moon gives a charming and indescribable effect.

It is well for those who in the autumn days have the opportunity of enjoying the effects of the harvest moon in the country; but the contented and careful observer will find much in the metropolis, lighted up by the harvest moon, which is both beautiful and interesting. Witness, for example, the fine proportions of St. Paul's Cathedral and Westminster Abbey; the cloisters of the latter; the mingling of the gas and moon-beams on the river; and a hundred other moon-light scenes, which will suggest themselves to the lovers of the picturesque.

STREET IMPROVEMENTS IN MELBOURNE, VICTORIA.

IN retail shops there is a great deal going on, according to the *Argus*, which gives the following as instances. Messrs. Alston & Brown, drapers, Collins-street, have lately erected on their old site premises equal to any in the country. The place is now fitted to hold stock to the value of 50,000*l.* or 60,000*l.* Another drapery establishment, erected nearly opposite the Bank of Victoria, by Messrs. Appleton & Littlewood, is an ornament to the city. The architects were Messrs. Crouch & Wilson. Among the Collins-street shops, that into which Mr. Watson, tailor, has lately removed, nearly opposite the new Bank of Victoria, exhibits an amount of ornament not at all common here. In the neighbourhood of Scott's Hotel, and opposite the Western Market, numerous suites of offices have been put up. At the corner opposite the Union Bank, hitherto occupied by Mr. Mooney, chemist, a fine tall row of buildings is being erected. In Bourke-street West a row of shops is filling up the space between Morton's Hotel and Queen-street. Near the Bull and Mouth, several three-storied houses, with commodious shop-fronts, are taking the place of a portion of the Union Hotel. In Swanston-street, some welcome additions are being made to the shops in the busiest part; and Galland's Old Cabbage-tree Hat Manufactory,—a one-story remnant of primæval Melbourne,—has disappeared, to give place to a tall edifice, which does honour to the city. Further northward, the John Knox Free Church has been rebuilt with advantage, with a highly respectable Odd Fellows' Hall alongside. In stores and wholesale business buildings the improvement is yet greater. Messrs. R. Goldsbrough's stores in William-street are being nearly doubled in size. Messrs. Stevenson & Sons, soft goods importers, are putting up a store which will be by far the largest single building of the kind. There are to be five stories, and the roof will be 72 ft. above the ground. The architect is Mr. F. M. White, and the cost over 20,000*l.* The same gentleman is erecting some stores, 100 ft. by 66 feet, in Bourke-street, between King and William Streets, for A. Macfarlane & Co., importers of machinery; another, for the Hon. W. Degraves, at the corner of Russell and Flinders Streets; and he has also prepared plans for the St. Kilda Royal Hotel Company. The city improvements are likely to continue for some time, unless the building trades interfere by striking for wages too high to afford profit to those who are now investing their money in building.

ICE AS AN ARTICLE OF COMMON SALE.

A FEW years ago ice, in the summer-time, was a luxury which could be enjoyed only by the rich; but now, by means of importation from over-the-sea lakes, blocks of ice as clear as crystal, and in some instances of large size, are brought to London and other great ports. But while we encourage the importation of this—which has now become an established branch of traffic—we do not neglect our own ice harvest; and from canals, ponds, and various streams in the neighbourhood of the metropolis, we have enormous quantities of this article gathered in, and stowed away in wells for summer use. Some of those wells are for convenience close to the premises of confectioners. In many places ice is kept in enormous quantities; and the advantage which results from this is great; for it is not only an article of luxury, but of utility: for instance, in the heat of the present splendid season, we have seen the street costermongers

disposing of mackerel packed in ice. In the fishmongers' shops of even poor neighbourhoods, it is used with good effect; and we have not the least doubt that in butchers' shops, and in places where perishable goods are collected for sale, the use of ice would have a beneficial effect. But we would particularly now hint at the advantage of the use of this article in ordinary homes,—especially those of the middle class, and the industrial classes below. Ice might be kept in larders and cupboards, and in other places; and by its cooling influence prevent the spoiling of food and the spread of putrefaction. It, however, takes a long while before the most useful ideas obtain the appreciation of those who would be much benefited by adopting them. If there were *ice shops* established in convenient positions where persons might purchase two pennyworth or three pennyworth of this article, it would be of advantage to both seller and buyer: for instance, ice in the keeping of butter is useful; and often in cases of fever and other diseases it is most valuable.

COMPETITIONS.

The Albert Institute, Dundee.—Some strong objections have been taken to portions of the plans submitted by Mr. Scott. Mr. Scott has replied, and will doubtless seek to meet the views of all parties so far as this can be done. A better staircase would certainly seem to be necessary, and further accommodation to admit of the use of the hall for public meetings and concerts.

SELF-ACTING CLOSETS.

IN addition to the description previously given in our columns of the improvements in closets by Messrs. Reade & Hewitt, of Liverpool, their patent includes a "self-actor," which we will now more particularly explain, premising our observations by stating, that hitherto, in all the cases we are acquainted with, the self-acting closet is worked with two distinct valves, or else with a duplex valve, which is simply two valves in one. By levers actuated from the seat and cranks and rods communicating movement to them, one valve is opened while the other is shut, so that when being used, a chamber fills with water, from which it is afterwards discharged into the basin, on the valves being reversed. It will be seen from this, that though the requirements of a self-actor are very simple, the machinery is complicated, and where the duplex valve is on the service flushing-pipe the flush is very defective. Expense and liability to get out of order have hitherto been the chief drawbacks to the use of self-actors, which otherwise are much more suited for the use of workshops and offices, where they are being constantly used by a miscellaneous company not overtroubled with refined notions of care and cleanliness.

The object of Messrs. Reade & Hewitt's improvement is, firstly, to dispense with the duplex valve, for which they substitute a single-acting valve of the simplest construction, screwed to the front riser, with counterbalance weight acting on both valve and seat. It must be understood, that this valve is not on the flushing supply, but merely acts as a *feeder* to their pneumatic vessel, which is a cylindrical chamber of lead, holding about a gallon and a half of water when full. The service-pipe for flushing the basin is a syphon carried from the bottom of the vessel to the level of its top, and thence downwards into the arm-pipe of the basin, at which point it is trapped to prevent any air entering at the mouth of the pipe. As a provision for the escape of the air from the vessel, without which it would not fill with water, 3 ft. of ¾-in. air-pipe is carried from the top of the vessel and joined to the flushing-pipe. On the top of the vessel is a small lead chamber, with brass coupling screws and washer, forming a valve-box, containing a ball and bell air-valve; and an orifice at the bottom, 1-8th in. diameter, connects the valve-box and vessel. From the bell of air-valve a safety-pipe is carried into an arm-pipe specially provided in the basin. The action is as follows:—When the seat is depressed, the water flows into the air-valve box, closes the air-valve, and gradually fills the vessel through the 1-8th in. orifice, the air confined in the vessel escaping by the supplemental air-pipe, and thence through the flushing-pipe: the water rising in the syphon-pipe fills it, and then slowly trickles down the back of the basin. By a stop-tap on the supply, the water may be regulated to fill the vessel in one, two, or three minutes. So long as the supply-valve is open, the water remains in the vessel, being in suspension like the mercury in a barometer-tube. When the seat rises, and the supply is cut off, the air-valve drops, and the air entering the vessel, the contents are discharged into the basin with sufficient force to thoroughly flush it: a ½ in. bore pipe from the main, or a small pipe from a cistern, is an amply sufficient supply.

The second peculiarity is the shape of the basin, which is formed with a nearly straight back, the hole being but 3 in. diameter, and is fitted with a "fountain" spreader, which distributes the flush over the surface of the basin, and secures a good flush down the back of the basin. From the hole in the basin to the surface of water in the trap, through a pipe 5 in. diameter, the flush falls vertically about 6 in., imparting additional driving power; and this, together with the small hole in the basin, and the certain flush after use, prevents it from getting choked up.

WATER-WORKS.

Rotherham.—The accepted contracts for the construction of the New Water-works were read over at a recent meeting of the Local Board of Health. Messrs. Chadwick & Thirlwall, of Masbro', builders, have been entrusted with the masonry work, laying pipes, &c. The contract, which amounts to about 3,000*l.*, stipulates that the whole of the works shall be completed in six months; a penalty of 5*l.* per day being inflicted for every day that period is exceeded. The contract of the Staveley Iron Company for the supplying of cast-iron pipes amounts to nearly 6,000*l.* The contract of Messrs. Chadwick & Thirlwall does not include the constructing of the large reservoir at Packman's Bridge. For the present, filtering-beds only will be made there. There will be a small reservoir at the junction of the two streams near Whiston. The Board have not yet ascertained what they will have to pay for possession of the land through which the pipes will be laid, nor how much will be required to meet the claims for compensation. The clerk was instructed to get the contracts signed by the contractors.

Wigton.—A large and influentially-attended meeting has taken place here, for the purpose of considering upon the desirability of supplying the town with water by means of water works, and to hear a report upon the best means of doing the same, prepared by Mr. Hawksley; also to hear an explanation of the Local Government Act, 1858. The feeling of the meeting appeared to be almost unanimous in favour of water-works, and of the report, as also of the adoption of the Local Government Act, 1858, under which the proposed works could be established, and any other requirements in the town carried out. Mr. Hawksley's report states that experience has shown that the summer delivery from well-managed water-works, for a population such as is located in Wigton, may amount to 25 gallons per head per day, which, to a population of 6,000, would be equal to 150,000 gallons per day; that the river Wiza offers all the facilities for the realization of the proposed undertaking. The estimated cost of works and land is 5,335*l.*, or, with preliminary and Parliamentary expenses, 6,000*l.* The annual income is estimated at 500*l.*, the annual expenditure 170*l.*, leaving 330*l.* for profit, being about 5½ per cent. upon the gross capital.

Scarcity of Water.—The Sheffield water-works company have found it necessary still further to reduce the supply of water to the town, in consequence of the drought; as, with a continuance of the present dry weather, the reservoirs would in the course of a few weeks become entirely empty. The directors have given notice that the supply will only be given every alternate day. There are complaints of scarcity of water from all parts of the country; and it is to be feared that the drought will bring ill health upon the community ere the close of the year. A memorial has been presented to the Home Secretary on the subject, as regards the general drainage of the country, though it is not easy to see what he can do towards remedying the evils which are pointed out. The memorial, however, prays for an inquiry into the water economy of the country. It is said that Asiatic cholera has occurred in the Lincolnshire fens from the drought, which has reduced the marshes to the state of stagnant pools.

PROVINCIAL NEWS.

Yarmouth.—At a council meeting recently, Mr. C. J. Palmer brought forward a motion for the construction of a new street from the Quay to King-street, so as to open a communication with the south part of the town. Two plans were proposed—one from St. Peter's-road and the other from Lancaster-road, the estimated expense of the first being 20,173*l.*, and of the second 14,946*l.*, including in both cases purchase of property, compensation, &c. The general feeling of the council was that such a road was required, but that the present time was inopportune for the undertaking. It was stated that they were in want of a new gaol, that a pauper lunatic asylum was looming in the distance, and that a fish wharf, which would cost 40,000*l.*, was in contemplation.

Hertford.—There is a great want of houses in Hertford, at rents ranging from 20*l.* to 50*l.* a-year, according to the local *Mercury*. Persons anxious to reside in Hertford, have been compelled to go elsewhere for want of such house accommodation. The villa residences which have lately sprung up at Bengeo are all occupied; and if the number were doubled, our authority thinks, tenants would be speedily found for them. But Bengeo is too far from the terminus of the Great Eastern Railway to be chosen as a place of residence by people who require to go daily to the city; and the approach to it by Port-hill is sufficiently inconvenient to be an objection with people whose business detains them in Hertford on the dark winter nights. There are, however, no residences of the class wanted, to be let either in Hertford or Bengeo; and there appear to be no persons enterprising enough to supply the obvious want. "The builder," adds the writer, "who should erect fifty houses in the Ware-road, not all of one class, but say at 20*l.*, 25*l.*, 30*l.*, 40*l.*, and 50*l.* a year, and therefore adapted to the wants of persons of limited as well as of ample means, would be a public benefactor."

Liverpool.—The execution of the new dock works at the south end of Liverpool, or what is known as the Herculaneum estate, and which, for the present, are mainly intended to give greatly increased graving-dock accommodation, are being carried forward with energy, there being, according to our authority, the local *Journal*, about 800 men employed in the excavating and masonry departments of the work. At present, the works extend from north to south, between Messrs. Jones, Quiggin, & Co.'s ship-building yard, to the boundary-wall of the Dingle property, and from the western river frontage to Sefton-street on the east, by which they are bounded, this space in itself occupying a very large area, and admitting of a floating-dock or basin at the north, from which the two graving-docks run parallel with each other southwards to the extent of about 800 feet in length, being the longest and most spacious docks of the kind ever constructed on the Mersey, and admitting of accommodation, at the same time, for from four to five ships each, of large tonnage. The floating-dock, which is of considerable dimensions, and large enough to accommodate several vessels, is nearly completed on the south and west sides; the excavations, which have been exceedingly heavy, being almost finished to the bottom, whilst the river walls westward, and the south wall, are both constructed, and the copings set. The dock is approached from the river through two entrances, one 80 ft. and the other 60 ft. wide, these entrances being respectively at the north and south of a large central pier, which has also been fully completed. The works at the north boundary of the floating-dock are not in so forward a state, the excavations being only partially effected, and the masonry of the boundary-wall not having yet been commenced; but the construction of another 80 ft. entrance at the north side has been commenced. This entrance is for the purpose of connecting the dock with another dock or basin, which the Dock Board ultimately contemplate forming on land immediately adjacent, northwards. The two graving-docks are being actively pushed forward, simultaneously with the floating-basin. A very large number, both of masons and excavators, have for some time been employed in this portion of the works; and not only has the whole of the excavation been accomplished, but the west dock is rapidly approaching completion, the masonry being nearly finished. The east dock is not in so forward a state, but the masonry and walls are in course of construction. The whole of the masonry of the works now going

on, as well as the excavation at the graving-docks, is being executed by the Board, under the superintendence of its engineer, Mr. Lyster; whilst the excavations at the floating-basin are being carried out by Mr. Monk, who has a contract for the same. The immense quantity of rock and earthwork taken out is conveyed in waggon-trains along the dock line of railway to Bootle, where it is brought into practical use in connexion with the river-wall and the artificial land now making on the strand of the river in Bootle Bay.——It is said that the Otterspool estate has been sold to the Great Northern Railway Company, at a price equal to about 24,000*l.* per statute acre; and that docks are to be constructed immediately, which will have the advantage of a deep water access from the channel between Knott's Hole and Garston. It seems likely that the south shore will shortly be as completely altered as the north shore has been, where mansions, villas, and terraces have given place to docks, timber-yards, and domiciles of trade and commerce.

West Derby (*Liverpool*).—Extensive alterations, improvements, and additions are about to be made at Croxteth Hall, West Derby, the seat of Earl Sefton, the lord-lieutenant of the county. The mansion is a spacious one, and part of it is ancient. The west wing will be entirely rebuilt: an additional story will be added to the east wing; and, running across the rear of the court-yard, a spacious ball-room will be erected. The plans have been prepared by a London architect, and it is calculated that the work will occupy several years, and will cost between 40,000*l.* and 50,000*l.*

Brighton.—The local *Herald* says he has misgivings for the result of the works going on at the Pavilion, as the scale of fees has been raised about 25 per cent. for private parties, and from 30 to 40 per cent. for public performances; one reason for the augmentation being the extra premium required for insurance, in consequence of the use of foot-lights. Could they not do without foot-lights by lighting from the ceiling at a proper angle, as suggested long since in the *Builder*? Foot-lights have a flaring and disagreeable effect on the faces and figures of performers, bringing into light (the nostrils, for example) what nature discreetly casts into shade; whereas a light cast on the human countenance from above its level always improves even the most ordinary or rugged features. By doing away with all necessity for foot-lights, the insurance would be reduced, as, in consequence, could be also the prices of admission.

Sunderland.—The architects of the Hutchinson Almshouses are Messrs. Thos. Moore & Sons, not Messrs. Mowbray & Son, as stated.

CHURCH BUILDING NEWS.

Stowmarket (*Suffolk*).—The restoration committee of Stowmarket Church have entered into a contract with Messrs. Betts & Rednall to proceed at once with the restoration of the entire interior. Before long it is thought very probable that sufficient money will have been subscribed to go on with the exterior.

Northampton.—A meeting of parishioners was recently held as to the restoration of All Saints' Church, when the report of the executive committee to the general committee was read, together with that of the general and executive committees combined. The latter stated that the estimated cost of the works required was 1,875*l.*, exclusive of the renewal of stonework on the exterior, which Mr. Law, the architect, stated, at the meeting, might be from 200*l.* to 400*l.* more, unless done in cement, which would cost from 40*l.* to 50*l.* The meeting resolved to issue a statement of the proposed alterations, and then call another meeting to open a subscription.

Evenley (*Northants*).—The foundation-stone of a new church has been laid at Evenley. A few months since Mrs. Pierrepont resolved, in memory of her late husband, the Hon. P. S. Pierrepont, to restore and reopen the old church; but on examination the ivy-clad walls were found extremely dilapidated, and she then determined to rebuild it, bearing the entire cost (about 3,000*l.*) herself. The church, which previously consisted of a nave, transepts, south aisle, and tower, will be enlarged by a north aisle, vestry, organ-loft, spire, and turret. The plans are by Mr. Woodyer, of Graffham, Surrey; and the contractor is Mr. Denny, of Rugby.

Maxey (*Northants*).—The church at this village has been formally reopened, after being restored and repewed. The restorations have been executed under the architectural superintendence of Mr. A. Sykes, of Milton. The north and south aisle and chancel roofs have been taken off, the two former being in a very decayed condition: the latter cut off the upper part of the chancel arch. Each has been replaced with new stained and varnished deal roofs. The whole of the old box pens have been cleared out, and new stained and varnished low seats substituted. The floor of church and belfry has been taken up, and relaid with new Ketton stone. The old singing-gallery, which obstructed the view of the Norman belfry-arch and west window, has been taken down, and the arch and pillars restored. The lath and plaster partition, dividing the vestry from the south aisle, has been taken down, and replaced with an Ancaster stone-pointed arch, terminating upon carved stone heads, and an oak screen made up from the remains of the rood loft. All the walls have been cleared of their loads of plaster, and the arches, and pillars, &c., of the accumulation of whitewash: the former have been restuccoed, and the latter generally repaired. The altar-rails (which were of wood) have been replaced with wrought iron, and oak-moulded and polished railings. The floor within the altar-rail has been relayed with Maw's encaustic tiles. In cleansing the walls several interesting relics were discovered, which have all been left open. On taking out the old pews, the foundations of the nave pillars were found to be in a dangerous condition: they have been strengthened.

Croydon.—The new temporary Church of St. Saviour, St. James's district, Croydon, has been opened. Its erection and finishing have been done in eight weeks by Messrs. King, Burton, and Hipwell. The design is that of Mr. W. Mullins, who is to be the architect of the intended new church; and though only between 300*l.* and 400*l.* have been spent on the building, it is fit in all respects for its present purpose. It is, of course, very simple in its details. The benches are of stained deal. All the windows are of stained glass. Coloured kamptulicon forms a covering for the floor. The seats are free, and accommodate about 200 persons.

Llanwarne (*Herefordshire*).—It was resolved upwards of two years ago to build a new church here on a new site; and Messrs. Elmslie, Franey, & Haddon, were requested to submit a design: the same was approved by the rector and parishioners, and Messrs. Niblet & King, of Gloucester, took the contract for its erection. The church has been erected on a site immediately adjoining the Llanwarne School, and was presented to the parish by Mr. J. Edwards, of the Cloughs, Staffordshire, one of the principal landowners. It is about 100 yards distant from the old church, going from Hereford. The cost of the church complete will be 2,350*l.*, and towards this sum 2,076*l.* have been raised. The new church is dedicated as "Christ Church," and is a cruciform building, consisting of nave, north and south transepts, north porch, chancel, vestry, and a tower surmounted by a spirelet. The nave is 56 ft. 6 in. long and 22 ft. in width. The chancel is 23 ft. in depth and 19 ft. wide. The transepts are 17 ft. in length by 17 ft. 6 in. in width. The height of the spirelet is 70 ft., height to wall-plate 17 ft., and the ridge attains a height of 36 ft. The style of the church is Geometrical. The edifice is entered under the tower, which serves as a north porch, through a moulded arch, which springs from blue forest stone shafts, surmounted by carved capitals representing natural foliage. The spirelet is octagonal, with traceried panels and moulded arches and drips. The upper portion is wholly of freestone, the cornice having at the angles gargoyles, the whole being surmounted by a finial. Above this arcade rises the spirelet, to the altitude already named. The covering of the church is Broseley tile in red and black bands, the ridge of nave being ornamented with Broseley crest, the chancel crest of ornamental ironwork. The walling is executed in stone quarried on the site, and is pointed with blue mortar. The quoins, plinths, windows, and door-dressings, &c., are of Bath stone,—the window tracery of Painswick stone. The porch is floored with Godwin's tiles, in black, buff, and red. The doors are of oak, and are hung with scroll hinges by Cormell, of Cheltenham, from a design specially supplied by the architects. The total accommodation provided is for 258 persons, the whole free. The nave roof is of steep pitch, supported by curved principals on moulded stone corbels. The entire roof is wrought, stained, and varnished. The nave is lighted by a three-light west window, with two three-light windows on the south side, and a single three-light window on the north side. The north transept has a pair of two-light side windows and a three-light window in gable. The south transept has a two-light side window, with two single-light windows and a wheel window in gable. The nave floor is laid with Godwin's tiles, in red, black, buff, and chocolate, with vandyked border. The heating apparatus is by Messrs. Jones & Son, of London. The walls are ashlared throughout with freestone, and the roof being wholly of wood, there is no plaster used in the church. The chancel is floored with Godwin's tiles, after a design supplied by the architects, the pattern increasing in richness as the east end is approached. The chancel-roof is waggon-shaped, with framed rafters, &c., stained and varnished. The font (given by the architects) and the pulpit were carved by Mr. W. Forsyth, of Worcester.

Arthington.—The new church of St. Peter, begun about eighteen months ago, by Mr. William Sheepshanks, has been consecrated by the Bishop of Ripon. The edifice is in the Early Decorated style (from designs by Messrs. Mallinson & Healy, of Bradford), and has three stained-glass windows; the east being by Mr. Hughes, the west by Messrs. Clayton & Bell, and the brass standards for lights by Messrs. Jones & Willis.

Huggate.—The church of Huggate, a village on the wolds of Yorkshire, between Pocklington and Driffield, has been re-opened after restoration. A new and commodious rectory-house has also been built. The tower and spire of the church, and the walls and arches of the nave, are the only portions of the old building left. The north and south aisles, chancel, porch, and vestry, have all been rebuilt in accordance with their original character. The internal plastering and white-wash of the walls, piers, and arches, have been removed, and the stone work is jointed and pointed. Open roofs, with chamfered timbers stained and varnished, are substituted for the old decayed roofs. The floors of the aisles are paved with Staffordshire tiles, except that within the communion rails, which is laid with Maw & Co.'s encaustic tiles. The old pews are discarded, and new open seats of plain design, occupy their places. The reading-desk and pulpit are also new, and the latter stands upon a moulded base of Ancaster stone. All the windows are glazed with cathedral glass, except the east window of the chancel, which is fitted with stained glass as a memorial, executed by Mr. Hodgson, of York. The external walling has been rebuilt principally with the stone arising from the old walls. The soil in the church-yard has been removed to the floor-level. All the works at the church and at the house have been carried into effect by Mr. J. W. Reeve, of Lincoln, builder, from the designs and under the superintendence of Mr. H. Goddard, of that city, architect.

STAINED GLASS.

Boxley Church (*Kent*).—Two stained-glass windows (one in the east and the other in the south) have been placed in this church. In the east window the subjects of "Baptism," the "Crucifixion," and the "Resurrection" are delineated. The subject in the south window is the "Angel of War," represented by St. Michael; and the "Messenger of Peace," represented by the Angel Gabriel. The whole was designed, and has been carried out by Messrs. Ward & Hughes, of London.

Seaford Church, Sussex.—Three stained glass windows have been put up in the south transept of this church. Two of them are erected to the memory of the late vicar. The windows were all executed by Mr. Wailes, of Newcastle.

St. Mary's, Taunton.—The new west window at St. Mary's Church is now completed. The subject is "The Last Judgment." The window comprises two rows of lights, five in each row, besides the traceries in the upper part. The central figure in the middle light of the upper row represents our Lord as the Judge of mankind. On His right hand and on His left are His assessors in judgment, representatives of the Old and New Testaments. On the right are the apostles: on the left are the prophets and kings. The foremost figure in the first light on the right hand of the Judge—a female form in a green robe—may either represent the virgin Church, as distinguished from the harlot elsewhere represented, or the mother of our Lord. Behind her is the figure of St. Paul. In the light beyond this—the extreme light on the right hand of the Judge—are St. Peter and St. John.

In the foreground of the group on the Judge's left hand is St. John the Baptist. Beside him is King David. In the light behind are Moses and some of the prophets. In the central light underneath is St. Michael the Archangel, the Angel of Judgment, represented as destroying the false and apostate Church, the scarlet woman of the Apocalypse. On the right, and under the New Testament Church, are the hosts of the saved, guided by angels, ascending through the air to the right hand of the Judge. The artist and manufacturer was Mr. Gibbs, of London.

Bromborough Church (*Cheshire*).—The altar window of this new church has been filled with stained glass. The subject is "The Crucifixion." The figures of our Lord and the two Marys only are seen, the distant city being visible under a lurid sky. The canopy, bordering, and ornamentation are all in the Early style. The window has been executed by Messrs. Ballantine & Son, of Edinburgh.

Leeds Parish Church.—A stained glass window has been fixed in the ante-chapel of this church, completing the series of stained glass windows in that portion of the edifice. The subjects are taken from the Creed,—viz. the birth, the burial, and the second coming of our Lord; and they were executed by Messrs. O'Connor.

St. Mary's Episcopal Church, Birnam, Dunkeld. The east window of this church has been filled with stained glass. There are three upright lights, containing "The Adoration of the Magi," "The Crucifixion," and "Christ appearing to Mary in the Garden," surmounted and surrounded by canopies and borderings. A head of the Virgin Mary, and angels with scrolls, with other appropriate emblems, are in the top tracery. A twin-light window, the gift of the clergyman, Mr. McMillan, has also been filled. To the right is "Moses with the Tables of the Law;" and to the left, "John the Baptist preaching in the Wilderness;" and in tracery a head of our Saviour is introduced. The artists were Messrs. Ballantine & Son, of Edinburgh.

SCHOOL-BUILDING NEWS.

Bristol.—The foundation-stone of new school-rooms, in connexion with the Wesleyan chapel, Portland-street, has been laid by the Rev. G. T. Perks, of London. The schools, which are to be built in Henrietta-street, at the back of the chapel, will, with the land, cost about 700*l.*; but, with certain contemplated alterations and improvements in the chapel, the total amount will be about 1,200*l.* The schools, it is calculated, will afford accommodation for upwards of 200 children; and the dimensions of the building will be 52 ft. by 32 ft.

Milborne Port (*Somerset*).—New schools have been erected and opened here. They are in the Tudor style, and built of native stone, with Forest marble plinths, and string courses, Bath stone windows and dressings. They comprise three rooms, 40 ft. by 20 ft. There is an ornamental clock-tower on the north side, and a stone arcade on the south front. The cost of the schools is about 2,000*l.*, nearly the whole of which has been borne by Sir Wm. Medlycott. The plans were supplied by Mr. H. Hall, of London, and the works have been carried out under the superintendence of Mr. A. Reynolds.

Brecon.—The new school-buildings of Christ's College and the Collegiate Church have been opened. The new school-buildings are situate on the Merthyr road. They are detached from the chapel, but to be connected with it by a cloister-like corridor. The school-buildings are in the Gothic style of architecture, the designs being furnished by Messrs. Pritchard & Seddon, architects, and carried out under the superintendence of Mr. Walton, Brecon. Besides the head-master's house, the school-building contains a dining-room for the students, the matron's room, and stone closets connected with it. This part of the building is separated from the other by a tower, which, when completed, is intended to form one of the principal architectural features of the building, but which is at present covered over below the roof, and then stopped for want of funds to finish it. Within this tower is the principal staircase, of stone steps, leading to the four dormitories, which are capable of containing about 50 beds for the accommodation of in-door students. The school-room, library, and class-room belonging to the old college buildings, have been repaired. The external walls of the building are of stone, the dressings being of Bath stone. The builders are the Messrs. Williams, of Llanfaes. The church referred to as having been opened after a process of restoration is 70 ft. by 30 ft. It has eleven lancet windows in the north side, four in the south side, and a large five-light east window, upon which is a representation of the Crucifixion. The windows are filled with glass of an ornamental character, supplied by Messrs. Clayton & Bell. The chapel was originally the chancel to a church, the rest of which, excepting a portion of the north aisle, is a ruin. The entire cost of the works already executed is about 10,000*l.*

Southport.—A building intended for Wesleyan day and Sunday schools has just been completed in Talbot-street, Southport. The schools, with playground and other buildings attached, measure 80 yards in length by 38 yards in width. The principal front is towards Talbot-street. The entrance, which leads into the infant school, is in the centre. To the right stands the school-master's house, provided with small bell-turret and spire. On the left is the chapel-keeper's house, the entrance to which is at the side looking towards the chapel. The buildings are in the Early English style of architecture.

ROMAN CATHOLIC CHURCH-BUILDING NEWS.

Brighton.—Additions (including a spire) have been made to the new Roman Catholic Church of St. Mary Magdalene, which was opened for divine service, although incomplete, some two or three years since. The additions are now completed. The nave has now four arches on each side, supported by pillars, and above the arches there are ten clerestory windows on each side. At the springing of each arch there is a carved head. The roof is of oaken timber, stained and varnished, and the corbels which support the main principals consist in each instance of a carved figure of an angel. Similar figures adorn the pillars between the nave and the chancel: this latter has two arches on each side, and also a chapel, and there are four clerestory windows above. The organ has been removed to a gallery erected at the western end of the nave. By the extension of the nave (some 33 ft.), the total accommodation afforded will be about 500 sittings. The spire is said to be the highest in the town. The tower (58 ft. in height), is built of red brick with stone dressings, and has seven windows in it, for the accommodation chiefly of the belfry and ringing-loft. The buttresses which support the tower on the north side have two niches for figures; and at each of the four tops of the springing of the spire there is the figure of an angel, of large proportions. The spire itself is built of stone; and its height, from the springing to the top finial, is 63 ft. 6 in.; and it contains a dormer window and two smaller ones above. The vane at the top, painted and gilt, is 8 ft. in height; and the total height of the building, from the base of the tower to the top of the vane, is about 130 ft. Mr. Blunt, of London, was the architect of the church; and the work has been done by Mr. Fabian, of this town. The stone carving was by Mr. Farmer, of London.

Leamington.—The new Roman Catholic chapel at Leamington has been consecrated. The walls of the chapel were first sprinkled, outside and inside, with holy water, and afterwards the altar was consecrated. There was a Maltese cross in the nave, upon the two shafts of which the bishop wrote the letters of the Greek and Latin alphabet, signifying the union of Greek, barbarian, and different nations in the one fold of Christ. The celebration of mass brought the ceremony to a close. The chapel stands upon a large and eligible plot of land, in Dormer-place, opposite to the Royal Pump-room Gardens. It has been erected by Mr. W. G. Gascoyne, of Leamington, builder, from the designs of Mr. Clutton, of London.

Northwich (*Cheshire*).—The foundation stone of a new Roman Catholic church has been laid here. The edifice is dedicated to St. Wilfrid. The site is a square piece of ground in Witton-street, a short distance from the railway station. It is proposed that, if the subscriptions are sufficient, a church standing east and west shall be erected on the south side, and a presbytery for one priest on the east side; so that a large open space shall remain in front of the building. The cost of the entire structure would be 1,545*l.*; but the church, which will cost about 1,300*l.*, will be first proceeded with. The style of architecture will be Early English. The church will be 88 ft. 6 in. long, by 44 ft. 6 in. wide, and it will seat upwards of 400, besides affording standing accommodation at the west end for another 100. Great trouble has been experienced in adopting proper precautions against dangers that might result from the running brine, which at Northwich has a tendency to loosen the sand, to undermine foundations, and to weaken buildings. The foundations of the church have been made as secure, it is thought, as possible. The walls are to be very low; and the columns of wood after the model of some of the old Cheshire churches, have for greater safety been adopted in preference to stone pillars and arches. The exterior of the church (which is to be built of brick, the window sills over the coping alone being of stone) will be very plain, but the architect has endeavoured to secure breadth of effect in the roof, which will be in one span, and covered with Bangor red and blue slates. The church will consist of five bays, which will be divided by brick buttresses with moulded tops and weatherings. The difference between the chancel and the nave will be strongly marked, and at the junction of the two will be a spirelet bell turret, framed in wood, covered with slate, and surmounted with a metal cross. The church is to be entered by a large porch, ornamented with moulded bricks, on the north side, facing the street, and will consist of a nave and north and south aisles, with a space at west end railed off for baptistery. There are also to be a side chapel, sacristy, and presbytery. The roof, which will be lined with board stained and varnished, will be supported by columns of wood framed together with principals. The floor under the benches will be of wood, and the other portion of it will be tiled. The chancel will be entered by steps, will contain the altar now in use, and will be lighted with a triplet of lancets and by a vesica window. The aisles are to be lighted by lancet windows in couplets, and the nave by large windows in the east and west ends. The architect is Mr. Edmund Kirby, Birkenhead. Messrs. Lester & Drinkwater, of Northwich, are the contractors, and Mr. Holland is the clerk of the works.

Skelmersdale (*near Ormskirk*).—The foundation stone of a Roman Catholic Church has been laid in the rapidly-improving village of Skelmersdale, the site being on Know-brow. The style of the proposed edifice will be Gothic, and it will be built of brick with stone facings. The church, with the school and house, will stand on about 2,000 square yards of land, which has been given by Mr. William Rotherham, of Skelmersdale. Mr. John Middlehurst, of St. Helen's, has undertaken the contract; and the designs have been drawn by Mr. Pugin.

RAILWAY MATTERS.

THE Caledonian Railway has just adopted a plan for the transmission of single copies of newspapers by rail which is likely to prove of great use to newspaper readers on that line over the localities it traverses. The system is simply an issue of farthing stamps, prepared after the fashion of postage stamps: perforated and gummed like these, they are sold in sheets containing a dozen, the price of the sheet being of course threepence. The stamp bears the impress:—"Caledonian Railway. No. (say) 2,585. For one newspaper only. To be called for by consignee at the station on the Caledonian Railway to which it is addressed."

——The Great Northern Railway directors state in their half-yearly report that the capital account stands as follows:—Received to the 30th of June, 13,144,236*l.*, and expended 12,897,913*l.*, leaving a balance of 246,323*l.* The total expenditure on capital account during the half-year was 168,590*l.*, of which 31,120*l.* had been paid for land, and 46,145*l.* for works. Twenty new engines, and 500 new waggons, suitable for the carriage of goods and coal, had been contracted for to meet the requirements of the traffic. The gross receipts for the past half-year amounted to 833,814*l.*, the gross expenditure to 441,453*l.* leaving a balance of 392,361*l.* A net balance of 134,721*l.* would enable the proprietors to declare a dividend on the original stock at the rate of 5½ per cent. per annum. In the corresponding half of 1863 the dividend was at the rate of 4¼ per cent. per annum.——The traffic receipts of railways in the United Kingdom amounted, for the week ending the 20th August, on 11,430 miles, to 705,109*l.*, and for the corresponding week of last year, on 10,994 miles, to 643,817*l.*, showing an increase of 436 miles and of 61,292*l.* on the receipts.——The foundations

of the piers for the fifty arches over the Ditton Marsh on the Aston, Runcorn, and Ditton Railway (Runcorn Gap) are complete. Twenty of the piers are built to the height of the springing of the arch, and the rest to several feet above the surface of the ground. The foundations of eighteen piers out of thirty-three of the viaduct through the town of Runcorn are complete. At the bridge over the river Mersey, the masonry of the Cheshire abutment has been built to 6 ft. above the level of high-water mark. Of the forty-two caissons for the cast-iron coffer-dam for the river pier on the Cheshire side, thirty-four are to the rock, and eight others in process of sinking. At the river pier on the Lancashire side, the wrought-iron piling for the staging is being proceeded with. The five piers of the 60-ft. arches in the river have been commenced, and masonry of the three brought up from the rock to low-water mark.——Of late years the directors of the Stockton and Darlington Company have taken a large body of the more respectable and intelligent of their engine-drivers into co-operation with them. They allow them to work the engines themselves, the men finding all the material; and, instead of wages, they pay them so much per mile; thus enabling them to make more money per month than they could ever have earned by wages.——In Ireland there were on the 31st of December, 1863, 1,741 miles of railways open: 238,794 trains ran, of which 203,977 were passenger trains, carrying 11,162,191 passengers, which, taking the population at 6,000,000, gives nearly two journeys for each person. There were three accidents, by which twenty-one persons were injured, but no one was killed. The receipts from passenger traffic were 942,279*l.*; from goods traffic, 576,375*l.*; and from all sources, 1,518,654*l.* The gross working expenditure was 49 per cent., and amounted to 750,412*l.*, leaving net receipts 768,242*l.* The Irish lines yielded in 1863 net receipts giving 441*l.* 5s. 3d. for each mile open; the Scotch lines, 898*l.* 0s. 5d. per mile; while the English railways realised 1,572*l.* 9s. 6d. per mile.——The Pneumatic Railway at the Crystal Palace, Sydenham, already spoken of in the *Builder*, has been opened for passengers, by way of experimental illustration of its capabilities in this way no less than for parcels.

THE TRANMERE WATER SUPPLY.

ARBITRATION CASE.

In the Wirral Waterworks Company *v.* Lloyd, before a special jury, at Liverpool, the plaintiffs sued the defendant, as the clerk of the Tranmere Local Board of Health, for 8,260*l.*, the amount of an arbitrator's award in an arbitration between the Waterworks Company and the Local Board. The Attorney-General, Mr. James, Q.C., and Mr. Baylis appeared for the plaintiffs; Mr. Mellish, Q.C., and Mr. Crompton Hulton for the defendants.

The Attorney-General, in his opening, stated that, in the Tranmere Improvement Act, which passed in June, 1862, there was a provision, in section 51, that all the powers granted by the Wirral Waterworks Act of 1859, for the supply of water within the township of Tranmere, should cease. An arbitration was fixed, Mr. J. Brumlees being the arbitrator for the Local Board, Mr. Bancroft for the Waterworks Company, and Dr. W. Fairbairn, than whom there was no gentleman in this country more competent, was the umpire. A question then arose whether the arbitration had not lapsed, by efflux of time; and an Act was then obtained, giving full power to the arbitrators and umpire to proceed, and from time to time, as they thought fit, to enlarge the period within which their award might be made, the period not to exceed one year from the passing of the Act, and the award of the umpire to be final and binding on all parties. Dr. Fairbairn made an award of 8,260*l.*, and he also settled the costs, 861*l.* 3s. 3d., to be paid by the Local Board. The Board refused to comply with the award; and, in November last, his learned friend, Mr. Mellish, obtained from the Court of Common Pleas a rule to show cause why the award should not be set aside, on the ground that the umpire had exceeded his authority and jurisdiction. The company's counsel showed cause, and the court unanimously pronounced the award to have been made pursuant to the jurisdiction given to the arbitrators and the umpire. The board, however, thought they ought to have water at the cost of the company, and would not pay. This action was, therefore, brought to recover the amount of the award.

On the part of the defendants Mr. Mellish argued that the question at issue was the meaning of the word "value," with reference to the award. The plaintiffs held that the value of the mains and pipes included their productiveness, and the defendants argued that it meant the cost of the mains and pipes and the cost of laying them down, which would be 3,913*l.* 10s. 11*d.* The only material evidence in the arbitration referred to the latter, and upon that he contended the award ought to have been made.

The judge recommended that the parties should consent to a reference, and thus avoid further expense and litigation. He ruled, however, that there was evidence for the jury. The arbitrators ought not to give damages as compensation for profits; but they were bound to give the company the value of the mains and pipes as laid down.

The jury found that the umpire had not exceeded his authority; that there had been an enlargement of time; and that the award was the fair value of the mains and pipes. They found for the amount of award and costs, without interest, 9,123*l.* 3s. 3d.

THE BUILDING TRADES MOVEMENT.

Stourbridge. — At the local petty sessions several men have been charged with intimidation, and others with quitting their employment under threats from the intimidators. In some cases the magistrates allowed those charged with quitting their employment to pay the costs and return to their employment, without any other condition. In one case of intimidation the magistrates intimated that the threat was sufficient to convict upon; and in another the evidence was considered insufficient. In the latter case an advertisement to the following effect had been inserted in the *Daily Post*:—

"Notice.—To the Master Builders of Stourbridge and its Vicinity,—That we, as a branch of the Amalgamation Labourers' Society, do hereby give notice to Messrs. Ife, Brettle, Allsop, and others connected with the trade, that, if they do not come on friendly terms, according to our delegate's demand, at a meeting held July 4th, 1864, by the said master; and if they, the masters, do not come to some arrangement before the 15th day of August, 1864, we shall draw both bricklayers and labourers from those masters until the arrangement be made with our delegate who attended the last meeting convened by the masters; and we as labourers shall not work after Saturday next.—Dated this 8th day of August, 1864.—Martin M'Call."

Cardiff.—The operative carpenters on strike give the high scale of market prices and exorbitant house rents as a reason for insisting on their demands. The attempt to take contractors and others at an advantage by not giving due notice is complained of on the other hand.

Birmingham. — The carpenters and joiners have had meetings, at which resolutions have been unanimously passed against systematic overtime; and to the effect that where overtime is absolutely necessary, it shall be paid for, for the two first hours after half-past five p.m., at the rate of two hours for a quarter of a day; and after that time at the rate of time and a half up to six a.m.; and also on Saturday afternoon after four o'clock, and double time for Sunday work. Every member present pledged himself to work overtime only on these terms.

Carlisle.—Here the masons have obtained what they asked for, and the strike is at an end.

Edinburgh.—The operative joiners, from all parts of Scotland, have held a grand demonstration in Edinburgh. The gathering was specially to celebrate the successful termination of the movement amongst the Edinburgh joiners for a reduction of their hours of labour. They now work fifty-one hours weekly, and their minimum wage is 5d. an hour. There was a deputation from Dumfries; and, including the joiners, about 200 persons left by a cheap early train for Edinburgh per the Lockerby and Caledonian railways. There were also deputations from Carlisle, Glasgow (numbering 1,500), Partick, Govan, Renfrew, Greenock, Vale of Leven, Aberdeen, Dumbarton, Perth, &c. The various branches, on arriving by the different railways, proceeded to the Music-hall, where a procession, consisting of between 4,000 and 5,000 joiners, was formed, and, preceded by the Edinburgh society, marched through the principal streets of the town, accompanied by four bands of music, and with numerous flags and devices peculiar to the trade.

French Method of Extinguishing a Strike.—The Paris correspondent of the *Daily Telegraph* says,—"The law on coalitions continues to work as badly as ever. After the strike of the porcelain workmen at Limoges, we have the strike of the tobacco workwomen at Bordeaux. Ten or twelve hundred of these, discontented with some new regulations, assembled in the court of the factory, screamed, shouted, and declared that they would work no more till things were altered. Two fire-engines were brought into play, and water was pumped for a considerable time on these female rebels. They stood the showers with perfect composure, till at length, having lost their voices by protracted shouting, the noise grew fainter, and advantage was immediately taken of the lull to enforce obedience to the new order of things."

Books Received.

On the Application of Cast and Wrought Iron to Building Purposes. By William Fairbairn, C.E., F.R.S., &c. Third edition. London: Longman & Co. 1864.

THE increasing demand for this work is the best evidence of its utility. It has been out of print, it appears, ever since the death of Mr. Weale, who published the former editions. In the present issue, Dr. Fairbairn has brought his subject down to the present time, as regards constructive art, and has introduced several additions and improvements. In the preface to the third edition the author says:—

"It will be observed, when treating of fire-proof buildings, that wrought-iron beams and girders are to some extent superseding the use of cast-iron; and in that section will be found examples upon a scale sufficiently large to insure increased security for the support of arches, or any other description of flooring which the character of the building may require. In this department it is, however, to be regretted that architects do not avail themselves of a material so admirably adapted as wrought-iron is for strength and security from fire, to a much greater extent than has hitherto been adopted. The greatest number of our dwelling-houses and public buildings are not strictly fire-proof, but only partially so: and instead of making the whole free from risk, we appear to be content if the main beams of the different flats are of iron, whilst the floors, joists, &c., are chiefly composed of wood.

This appears to be an omission to which I am desirous to direct attention; and I trust the time is not far distant when the extended distribution of wrought-iron in all its forms and appliances may be calculated upon. Rolled iron joists, similar to those so extensively used by French architects, would render the whole construction fire-proof, save a high rate of insurance, and enhance the value and permanency of the structure."

The section on wrought-iron bridges has been enlarged with additions and examples, calculated to determine the value of the varied and different forms now in use. Those on the lattice principle the author has investigated experimentally; and in this edition there are formulæ by which to calculate the position and strains on the struts and tension-bars of these important structures. Every architect should have this book.

VARIORUM.

Messrs Cox & Son's "Illustrated Catalogue of Monuments, Tablets, and Rails," comprises a number of designs by several known architects, exhibiting various degrees of merit. The prices are given; and the publication will be found useful.——Mr. Geo. Measom's "Illustrated Guide to the London and South-Western Railway," and his "Guide to the Isle of Wight," have the merit of cheapness, especially the first-named, which gives 475 pages of letterpress, and 280 wood engravings, for a shilling. A large amount of surface information is pleasantly compiled.

Miscellanea.

THE LIVERPOOL EXHIBITIONS OF PAINTINGS.—The Liverpool Academy, now removed from Post-office-place, and occupying a smaller gallery at Griffiths's in Church-street, have opened their exhibition with about 160 works of a choice description, according to the local *Journal*. The Exhibition of Paintings and Sculpture in Slater-street is also open with, it is said, a fine collection, nearly all new.

SHAKSPEARE PENNY MEMORIAL.—The Workmen's Committee, for obtaining funds, and erecting a statue of Shakspeare, is formed, with an honorary council of advice, and has issued a precise programme of its intention. The sum sought to be raised is 2,400*l.*, viz.—1,200*l.* for statue, and 1,200*l.* for "an ornamental shrine of iron and glass to enclose it." A meeting will be held in the course of a few days to bring the intention before the public.

LAMBETH BRIDGE.—The directors reported to the shareholders that the balance in hand applicable to a dividend was 1,819*l.* 3s. 10d., and they recommended a dividend at the rate of 8 per cent. per annum for six months ending the 31st day of August, 1864, to be payable on the 30th September next. This left about 580*l.* to be carried to the next account. The recommendation was agreed to.

STEAM SAW MILLS COMPANY.—The prospectus of a new joint-stock company, under the title of the Mersey Steam Saw Mills Company, has been issued under the auspices of the Liverpool Financial Association. It is proposed to raise a capital of 200,000*l.* in 10,000 shares of 20*l.* each, and the object is to purchase and extend the saw mills which have hitherto been worked by Messrs. Matthew Gregson & Co. for a period of more than forty years; and also to take the works hitherto known as the Brunswick Steam Saw Mills Company, and formerly belonging to Mr. M'Nicol. Special attention is to be paid to the cutting of mahogany and other furniture-woods into veneers,—a branch of business which has latterly considerably increased in Liverpool, owing to a demand which has arisen from the manufacturing towns adjacent to the port.

ST. MARY'S CHURCH, ABERDEEN. — The Rev. F. G. Lee, whose proceedings in the erection of St. Mary's, Aberdeen, excited much comment, has appeared in the Bankruptcy Court. His liabilities amount to 5,000*l.*, mainly on account of the church, and as Mr. Lee states, jointly with the churchwardens.

AUSTRIAN ART ASSOCIATION. — Vienna announces an Art Exhibition, organised by the Austrian Artistic Association. The Exhibition is to be permanent, and, with certain exceptions, the works are to be changed once a month. Artists are required to send their works in only a week previously, but they must be approved by the council of admission. A novel item in the regulations is, that artists are not required to send frames, the association announcing that it is provided in this respect for pictures of all sizes.

VALUE OF LAND IN NORTH WALES.—Messrs. Leifchild & Cheffins offered a further portion of the Mostyn estates, at the Town-hall, Rhyl, on Tuesday, the 16th. They comprised several fine farms, valuable accommodation land, extensive woods and plantations, and nearly the entire ancient borough town of Caerwys, containing together about 2,200 acres. The estate was put up in one lot (though divided into 128 lots in the particulars of sale) at 70,000*l.*, and, after a spirited competition, was knocked down at 85,000*l.*, including the timber, to Mr. Hugh Jones, of Wood-street, Cheapside, who received the hearty congratulations of a very large company on his purchase. As a proof of the inadequate rentals at present received we are authorized to state, that forty-five years' purchase were realized at this sale.—*Cambria Daily Leader.*

BLASTING A CHALK CLIFF.—For several weeks past a number of Sappers and Miners from the Royal Engineer establishment at Chatham have been sapping and mining a portion of an immense cliff of chalk at Halling, in the occupation of Mr. Thomas Weekes, lime and cement manufacturer, near Rochester, the cliff being the property of the Earl of Darnley. The chalk to be removed is estimated to amount to about 100,000 tons. The quantity of gunpowder used in the operations weighed in the aggregate 5,400 pounds, distributed in five charges. There were four immense shafts bored in the summit of the cliff, and these were carried down to a depth varying from 64 ft. to 25 ft. in the chalk. The battery for transmitting the voltaic current to the charges was placed about 200 yards from the shafts, the sparks being conveyed by wires coated with 'gutta-percha from a Grove's battery of forty cells. The effect of the explosion was that the whole crown of the extensive rock was lifted up several feet. The chalk thus blown down is valuable.

MONUMENTAL.—It has at length been decided by the London Committee for the erection of a monument to the memory of the late Joseph Locke, M.P., F.R.S., that the monument shall be erected in the Locke Park, at Barnsley, of which town the deceased gentleman was a munificent benefactor. Baron Marochetti, the sculptor of the statue, has visited Barnsley for the purpose of selecting a suitable site for it, and appeared quite satisfied with that afforded in the grounds of the People's Park, for which park itself Barnsley is indebted to Mr. Locke and his widow.—— Nuremberg promises a monument to Stonewall Jackson. The way in which Nuremberg has come to promise it is rather curious. A young man from Nuremberg, named Volk, emigrated to America as a journeyman cooper. After arriving there his early passion for art grew stronger: he made sketches for illustrated papers; and gradually became a self-taught artist. The war found him at Baltimore, whence he wandered south, and was engaged as draughtsman on the staff of one of the Southern generals. He made a bust of Stonewall Jackson from a mask which he took from the dead face; and when the monument was put up to competition by the Southern Government the young German artist won the prize. But even then he had to find means for executing his work, and for this he ran a ship laden with cotton through the blockade, and brought it to Europe, where the sale of the cotton gave him the funds required. He is now at work on the monument, which represents the general on horseback, a fine Arabian steed, from Stuttgart, serving as a model for the horse.—— Father Mathew's statue, it is stated, has been successfully cast.

THE QUEEN'S HOTEL, ABERYSTWITH.— The ceremony of laying the inscription tablet over the principal entrance, and 23 ft. above the footings of this building, has been performed by the lord-lieutenant of the county. The building occupies a south-west aspect of 153 ft. to the Bay of Cardigan, by a mean depth of 92 feet: it will possess all the modern appliances of a first-class hotel, including a central assembly-room, and is expected to be opened in June next.

AN ELECTRIC TELEGRAPH WITHOUT WIRES.— Experiments are now in progress, both at Mont Valerien and Vincennes, says *Galignani*, for the purpose of testing a new system of electric telegraphy invented by M. Armant Douat, who, it is said, has found means to do away with electric wires altogether, and transmit despatches by the sole action of the earth. A zinc and a copper plate, bent in spindle-like shape, are buried in the ground, with their convexity turned in the direction in which the despatch is to be sent. If there be anything in this, it certainly excels the Dundee electro-telegrapher (now deceased), who sent messages across Portsmouth harbour without any crossing wire, but by means of wires and plates on either side, extending at right angles to the line of direction across the harbour. This gentleman (Mr. Lindsay, if we mistake not), was confident that merely by means of plates, with wires extending for many miles on either side, a Transatlantic telegraph might be made.

PROPOSED ALBERT MEMORIAL ORPHANAGE AND SCHOOLS AT NEWCASTLE.—Mr. Thomas Oliver, architect, has prepared a design for a proposed Albert Orphanage and Schools, intended to be erected in Bath-lane, Newcastle-upon-Tyne. The proposed structure is intended to be built on a plot of ground secured from the corporation behind the Bath-lane Church: it will be entirely of stone, and the style of the architecture adopted is the Middle Pointed Gothic. It will be a detached building, and between it and the church is a schoolmaster's house. The front elevation shows a building three stories in height, with gables at each end, and a projecting staircase, which terminates in a tower, and is intended to be used as an observatory. The windows are all pointed, and the principal ones have traceried heads, portions of which are to be used for ventilating purposes. The roof is broken by dormer gablets, and is surmounted in the centre by a large ornamental ventilator. On the ground floor, in addition to the playgrounds, are boys' schoolroom, infants' schoolroom, and class-rooms for both: on the upper floor, are girls' schoolroom and class-room; and above these are dormitories for the accommodation of about fifty orphans. The schools will accommodate 200 boys and 200 girls, with master's and mistress's residences attached. The estimated cost of the entire scheme is 4,000*l.*

NEW WESLEYAN CHAPEL, CORBRIDGE.—The foundation stone of a new Wesleyan Chapel has been laid at Corbridge. The erection has progressed considerably. The chapel—which is being erected at the north end of the village — is on the cruciform plan, in the Decorated style. At each end of the cross are to be erected galleries, that on the east side being appropriated to the use of the orchestra, whilst underneath will be the ministers' vestry. The entrances form wings on either side of the west end, namely, that nearest the road. The side passages internally will be separated from the main body of the building by pillars and arches. The total length of the chapel will be 62 ft.; width of nave, 19 ft. 6 in.; and extreme width of transept, 43 ft. 6 in. The roof is intended to be open and boarded, and will—together with the other woodwork,—be stained and varnished. The height from the floor to the ridge will be 31 ft. Externally, the principal ornament is confined to the west gable, in which are to be inserted two traceried windows forming with arches between and on either side of them an arcade across the front. The chapel will be heated by Gill stoves, and the lighting will be accomplished by pendant coronæ from the roof. The chapel will accommodate about 380 persons, or, with the proposed extension by means of galleries, about 520 persons. At the east end of the chapel is a school-room, capable of accommodating about 200 children. The chapel and schools are being erected by Mr. J. Harrison, contractor, Gateshead, from designs furnished by Mr. F. R. N. Haswell, architect, North Shields. The total cost will be somewhere about 1,000*l.*

IGNORANCE OF HYDRAULICS.—An amusing incident is described as having occurred at a late fire. Owing to a defect in the nearest hydrant, some delay took place before the hose was attached. In the interval a citizen, desirous of making himself useful, got possession of some hose, and succeeded in attaching it to the spout of an ordinary pump. His task accomplished, he shouted in triumph, "Now, then, men! We'll have plenty of water: pump away!"

ANTIQUARIAN CURIOSITY. — While excavating the soil at the Kettering Temperance-hall for the apartment beneath the platform, one of the workmen brought to light an ancient mattock, of singular construction, supposed to have been employed at the ironworks which—there is said to be evidence to prove—existed on this spot ages ago, probably in the Saxon era, or earlier. The eye of the implement is not welded, but appears to have been somewhat clumsily bent round to enclose the handle, and it is altogether a very curious tool, something like what are seen on the Egyptian sculptures. It is in possession of Mr. Joseph Hawthorn, builder.

THE SILVER USED IN PHOTOGRAPHY.—A series of papers addressed by MM. Davanne & Girard to the French Academy of Sciences, on the subject of photography, make some curious revelations with regard to the waste of the precious metals in the operation. The silver alone which is employed for photographs in Paris amounts to several millions of francs. Only 3 per cent. of this remains on the photograph, so that 97 per cent. will continue to be lost until some method be found for recovering it. MM. Davanne & Girard, who make this startling announcement, propose that plates of copper be put into the argentiferous liquid, whereby in the course of three or four days the silver will be precipitated in a spongy state.

THE DISPUTE IN THE IRON TRADE. -The sum the men in this trade have lost in weekly wages with what they have received from the Union, is thus contrasted by a Leeds paper: — The money lost to this district in weekly wages alone, since the commencement of the strike, amounts to 160,000*l.*; so that, deducting the 11,588*l.* received from the Union, there remains as a permanent loss to the workmen 148,412*l.* Large numbers of the hands have gone in at all the works, and a fair supply of iron, both as to quality and quantity, may now be obtained. One result of the strike has been the introduction of a number of foreign workmen. It seems these men only received one-half the remuneration at home which they get here, and large numbers more are desirous of coming.

BIRMINGHAM HEATH AND SMETHWICK CLUB AND INSTITUTE.—The new building for this club and institute has been opened with a public meeting and musical entertainment. The mayor presided. The building is a plain structure, having a central projecting gable and two wings. It is in a style of composite Gothic order. It has been erected, at a cost of 650*l.*, by Messrs. W. & J. Webb, builders, Hockley, on plans prepared by Mr. C. Clarke, architect, London. It contains a lecture-room for 350 people, a reading-room, committee-room or class-room, kitchen, sleeping-room, and bar. Attached to the building are grounds containing a gymnasium and a quoit-ground, skittle-alley, and a shooting-gallery. The entire premises occupy a plot measuring 1,500 square yards. To meet the cost the sum of 500*l.* was raised among the working men in the locality in shares, and a fourth call upon the shareholders will liquidate the deficit.

ROMAN REMAINS AT SHIELDS.—The workmen at present engaged in lowering the hill approaching Walbottle Dean have come upon a Roman gateway in perfect preservation. It is composed of massive blocks of stone, the free space for the gate, which had been apparently in two divisions, being 10 ft., and in a line with the wall. Traces of ornamentation are distinctly visible on some of the stones, more particularly on that portion of the pillars which, as the gate now stands, fronted the north; and it is curious to observe the rock-work now so generally used in railway masonry on the Roman remains. The workmen have left the gateway standing where they found it, but it must speedily be removed to make way for the improvement now being carried forward at Walbottle Dean. Perhaps the Duke of Northumberland, or the Society of Antiquaries, may be able to dispose of it in some convenient place.

EROSION OF LEAD BY INSECTS.—The fact that there are insects of different species which bore into lead has been heretofore known, but a correspondent of the *Times* recalls attention to the subject in a *resumé* of proceedings as to it in the *Comptes Rendus*. The insect which bored French bullets in the Crimea was not known in Russia, but is said to be common in the Jura, in France, and in Germany and Sweden, as well as in England. It is a wood insect, and usually attacks silver firs and pines. It is the larvæ of the insect which attack the lead—not the perfect insects, which die in the excavated passages even immediately after the metamorphosis, as very often occurs with insects in general. Roof and other sheet lead has been known to be bored by a species of Bostriche (*B. Capucinus*). The *Sirex gigas* also often cuts its way into lead by means of its mandibles, as also the *Callidium sanguineum*; and lead pipes have been known to be perforated by an insect named *Apate lunaralis*. The mandibles of some of these insects consist of a saw, toothed and cut like a file. Perforations in lead ascribed to corrosion may sometimes be the product of the mischievous industry of such insects.

VEGETATION IN THE CISTERNS AT THE WORCESTER WATER WORKS.—A very curious plant, says a correspondent of the *Gardeners' Chronicle*, "was sent to us lately from the cisterns supplied by the Severn water at Worcester, which (besides stopping up the pipes) made the water totally unfit for artificial fish breeding, as the threads surrounded the eggs and rendered them abortive. This fungus forms a gelatinous mass, consisting of an infinity of threads of different diameters, which, whether articulated or free from divisions, present in their cavities a series of globose bodies or nuclei. Notwithstanding the aquatic habit and resemblance to certain algæ, we feel convinced [he says] that it is the spawn of some mould, but of what species we are altogether ignorant, as the threads possess a character of their own different from anything we have seen before in fungi. We tried in vain to get it to grow on rice-paste. The threads showed no change, but seemed to act as a putrefactive ferment, separating with extreme rapidity the watery from the solid constituents of the paste, and emitting a most loathsome effluvium, an effect which was not surprising, as it proved fatal to fish, and was characterized when fresh by a smell resembling that of sulphuretted hydrogen. We regret extremely that we had no further opportunity of examining this substance, and the more so as we strongly believe that hospital gangrene and malignant ulcers arise from vegetable contagion."

NEW BRICK-MAKING MACHINERY.—This invention, by Mr. H. Clayton, has a peculiar combination of mechanism, part of which we shall describe:—A cylinder, carried by a horizontal axis, and having by preference four moulding recesses at equal distances apart of the periphery, is employed. These moulding recesses are in succession brought into and retained for a time in a horizontal position opposite a pressing plate. The lower edge of the pressing plate is caused to slide to and fro on a fixed plate or table, on which a moulded or partially-formed brick is placed when in a suitable condition to receive a finishing pressure. At the back of the fixed plate or table there is an upright plate or stop, against which the end of the brick which is about to receive its finishing pressure is placed, so that when one of the moulding recesses is at rest in a horizontal position, the pressing plate moves the brick into the mould, and gives it the finishing pressure. The fixed plate or table is of such length as to admit of two or more bricks, or partly-formed masses of brick earth, being on it at a time; so that when one has been moved forward into a mould, and the pressing plate has returned, the next brick or mass of brick earth on the plate or table may be moved up into position against the stop. The cylinder in which the moulds or moulding recesses are formed is caused to rotate one quarter round for each revolution of the driving-shaft or axis. In order to discharge the bricks from the moulds or moulding recesses, a plunger or piston-plate, connected to a cross head, is caused to enter the mould which for the time is uppermost, and to press on the movable bottom therein, by which the movable bottom of the mould containing the finished brick will be pressed or pushed through its mould. In the *Engineer*, the mechanism is fully illustrated by engravings.

GAS.—The Malvern Link Gas Company have declared a dividend of 5 per cent., for the last half-year, carrying over 150*l.* 2s. 5d. to the credit of the company.

VALUE OF BUILDING LAND AT WORTHING.—At the sale of the Alexandra estate, situate at the eastern extremity of the town, and almost contiguous to the sea; the first piece of ground offered for sale was that at the south-western corner of the estate, in Alexandra-square. It contained a frontage of 31 ft., and an average depth of 109 ft. 5 in. After a smart competition it realised 90*l.* The opposite piece to this, on the other side of the square, containing a frontage of 20 ft., and a depth of 115 ft. 2 in., fetched 110*l.* Lots 2, 3, 4, 5, 6, of nearly similar dimensions, were sold at 65*l.* each; 7, 8, 9, 10, at 60*l.*; 11, 12, 13, 14, 55*l.*; 15, 16, 17, 60*l.* The plots in Alexandra villas—lots 18 to 33—began at 75*l.*, fell to 60*l.*, went up to 80*l.*, and fell again to 75*l.* There were in all eighty lots, and only about a dozen lots were purchased by Worthing gentlemen. The land was bought last September for 3,000*l.*, and it realised about 4,300*l.*

TENDERS.

For the erection of a house at Wadhurst, Sussex, for Mr. William Gordon Thomson. Mr. Herbert Williams, architect. Quantities supplied by Mr. James Dudley:—

Winnifrith	£3,263 0 0
Newman & Mann	3,213 0 0
Adamson & Sons	3,057 0 0
Brass	3,050 0 0
Condor	2,977 0 0

Accepted for business premises, Northgate, Wakefield, for Mr. S. Denham. Mr. Wm. Watson, architect:—

Excavating Brick and Stonework.	
Flower	£595 0 0
Slating.	
Hill	22 0 0
Plastering.	
Driver	42 0 0
Carpenter and Joiners' Work.	
Scholey	430 0 0
Plumbing and Glazing.	
Backhouse	110 0 0
Ironwork and Bellhanging.	
Kirk	13 16 6
Painting.	
Rayner	17 0 0

For erecting proposed Parsonage House at Flamstead, Herts, for the Rev. W. H. F. Hinde, M.A. Mr. J. T. Christopher, architect:—

Mathews	£2,677 0 0
Harris	2,350 0 0
I'Anson	2,221 0 0
Ryder	2,208 0 0
Robinson	2,200 0 0
Little	2,220 0 0
Young	2,080 0 0
Bottam	2,020 0 0
Adamson	2,007 0 0
Cowland	1,953 0 0

For completing "Potter's Hotel," Thorne-road, South Lambeth (exclusive of bar fittings), for Mr. J. T. Potter. Mr. W. F. Potter, architect:—

Sabey & Son	£500 0 0
Niblett	496 0 0
Green	376 0 0
Honour (accepted)	375 0 0

For villa and offices, East Barnet. Mr. Josiah Houle, architect:—

Mansfield & Son	£2,190 0 0
J. & C. I'Anson	2,130 0 0
Clemence	2,018 0 0
Patman & Fotheringham	1,996 0 0
Rowe	1,949 0 0

For works of restoration at Lyminster Church, Sussex. Mr. George Truefitt, architect:—

Bushby (accepted)	£477 18 8

Accepted for Holy Trinity School, Marsh, Huddersfield. Mr. Tarn, architect:—

Mason's Work.	
T. & G. Rhodes	£289 0 0
Joiners' Work.	
Christie	109 10 0
Slaters' Work.	
Goodwin & Sons	43 15 0
Plumber and Gaziers' Work.	
Chadwick	33 10 0
Smiths' Work.	
Scholefield	13 13 0

For the re-erection of Haroldswood Lodge, Romford-common, deducting value of the old materials. Mr. Joseph Harris, jun., architect. Quantities not supplied:—

Withers	£1,630 0 0
Forrest	1,620 0 0
F. & F. Wood	1,598 0 0

For building a public-house at Sudbury, Middlesex, for Mr. H. Weston. Mr. Isaac Bird, architect. Quantities supplied:—

Tracey & Co.	£847 0 0
Woodbridge	789 0 0
Brown	780 0 0
Williams	698 10 0
Rowe	697 0 0

Accepted for St. Mary's School, Outlane Longwood, Yorkshire. Mr. E. W. Tarn, architect:—

Mason and Slater's Work.	
Holroyd & Son	£309 0 0
Joiner's Work.	
Balmford, jun.	105 0 0
Plumber and Glazier's Work.	
Garton	37 0 0
Plasterer's Work.	
Crowther	18 10 0

For additions and alterations at No. 52, Tottenham-court-road, for Messrs. Warner & Son. Mr. J. Dent, architect. Quantities not supplied:—

Hyde	£499 0 0
Williams	493 0 0
Tracey & Co.	487 0 0

For enlargement of the Alexandra Hotel, Hyde Park-corner. Mr. Francis H. Fowler, architect. Quantities by Mr. William Harris and Mr. James G. Smither:—

Fish	£26,000 0 0
Duncanson & Moultrie	23,320 0 0
Jackson & Shaw	23,678 0 0
P. & A. Thorn	20,000 0 0

For new Congregational Church, Cambridge Heath. Mr. Joseph James, architect:—

Maers	£9,511 0 0
Dove	8,687 0 0
Myers & Sons	8,599 0 0

For alterations and re-building front at Messrs. Mappin, Brothers, Nos. 67 and 68, King William-street, City. Messrs. Smith & Williams, architects. Quantities supplied by Mr. W. R. Gritten:—

Alldred & Dalton	£3,316 0 0
Lawrence & Sons	3,140 0 0
Myers	3,120 0 0
Cubitt	2,980 0 0
Browne & Robinson	2,946 0 0
Little	2,937 0 0

For building the Crown Life Assurance Office, Fleet-street. Mr. T. N. Deane, Dublin, architect. Quantities supplied by Messrs. Tillott & Chamberlain, and Messrs. Wilson & Son:—

I'Anson	£21,151 0 0
Lawrence	20,844 0 0
Holland	20,387 0 0
Cubitt	20,375 0 0
Patrick & Son	20,049 0 0
Piper & Wheeler	19,825 0 0

For residence and dormitories, King Edward Refuge, Albert-street, Spitalfields. Mr. James Harrison, architect. Quantities supplied by Mr. Arthur W. T. Nicoll:—

Perry & Judson	£1,192 0 0
Little	1,140 0 0
Browne & Robinson	1,090 0 0
Coleman	1,070 0 0
Hill & Keddell	1,047 0 0

For alterations to No. 7, Chapel-street, Tottenham-court-road, for Mr. Nodes. Mr. R. H. Burden, architect:—

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every description of Manufacture of the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By LUKE HERBERT, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the important facts since the first publication, in 1836, of the Encyclopædia. The inventions and discoveries recently made have engaged the assiduous attention of the Editor; for, as the value of each was tested by experiment, a description was accordingly prepared. By the selection of new articles, and care in the revision of old ones, this edition has now become systematically enriched; so that it may be received as fully and faithfully expressing the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two large 8vo volumes, cloth lettered, price 30s.

CEMENT MANUFACTURERS,
LIME BURNERS,
BRICK MAKERS,
SLATE, TILE, DRAIN-PIPE, HAIR, LATH, and FIRE GOODS MERCHANTS,
ST. JAMES'S and THORNHILL WHARFS,
CALEDONIAN ROAD, LONDON.
ROMAN CEMENT made at the above works, is the best fresh from the kiln delivery, a great advantage to dealers and sewer contractors, especially in winter time.
PORTLAND CEMENT, of the best quality, strength, and colour, manufactured in Kent. This cement will carry from 7 to 10 sand to any of the Cements so much of which is now brought into the market and sold as Portland.
PLASTER OF PARIS, both coarse and fine, of very superior quality and colour.
LIME.—Grey Stone, Chalk, and Blue Lias Lime, well burnt, by the barge or yard, and may be had fresh ground daily, by steam power, from our mills.
BRICKS from our fields in Kent, by the barge alongside, in the river or wharves, or by cart from the above wharf, of good quality and moderate price.
A large Assortment of Glazed Stoneware Drain-pipes, Yorkshire Plain, Pan, and Paving Tiles, Hair, Laths, Chimney Pots, &c. always kept in stock.
BRICK-FIELDS, LIME WORKS, CHALK, FLINT, AND BALLAST WHARFS,
FRINDSBURY, near ROCHESTER, KENT.

HYDRAULIC LIME and ROMAN CEMENT, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Liverpool Docks, Manchester, and various waterworks, collieries, and mines throughout the country, being so long celebrated for its strong cementitious and connecting powers for masonry in water. Can be supplied by rail or water to any part of the kingdom, either in lump (loose), or ground, and in barrels and bags. The Limestone can be had in full cargoes, also their Cement in barrels, which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference. Apply at the Works; or to E. & W. AARON, Agents, 66, South John-street, Liverpool

PURE HYDRAULIC LIME, Manufactured from the best HALKIN MOUNTAIN LIMESTONE, same as supplied for the construction of the Liverpool and Birkenhead Docks.
The HOLYWELL LIMESTONE COMPANY are prepared to deliver the above, in lump or ground, packed in bags, into wagons, at the Holywell Station of the Chester and Holyhead Railway, or on board vessels at Greenfield Wharf, Chester River.
Prices and particulars furnished on application to Mr. EVAN EVANS, Manager, Parry's Mine Works, Holywell, Flintshire.
The Company guarantee the quality of the Lime to be equal to that used by the Engineer of the Liverpool and Birkenhead Docks.
Agents wanted. No applications attended to without a banker's reference.

JOHN DOWNEY, Victoria Wharf, Nine Elms, S.
Also Licensed Lighterman, of 11, Millbank-row, S.W.; and Licensed Lighterman and Wharfinger, of Hermitage Steam Wharf, Wapping, E

TO BRICKMAKERS. — All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

OATES'S PATENT SOLID BRICK MACHINE. — To CONTRACTORS, BUILDERS, BRICKMAKERS, and OTHERS — Persons about to establish Brickworks, or to enter into large Contracts, are respectfully requested to thoroughly inspect the above Machines, which may be seen in operation at the undermentioned works. These Machines are guaranteed to produce at the rate of "Thirty Bricks" (and upwards) per minute, sufficiently dense to be wheeled direct from the Machine to the kilns; and, with suitable clay, bricks can be made direct from the mine without any previous preparation.—To view, apply to the Government Dockyard Authorities, Portsmouth; GEORGE SMITH & Co. Contractors, 13, South-street, Grosvenor square, London; JOHN GRUNDY, Esq. J.P. The Dales, Whitefield, Manchester; JOSEPH MARSDEN, Esq. Bolton-le-Moors, Lancashire; Mr. J. WALKER, Contractor, Patent Solid Brickworks, Crewe, Cheshire; Mr. GRADWELL, Hindpool Saw Mills, Barrow-in-Furness, Lancashire; or at the Works of the Stourbridge Solid Brick Company, Brettell-lane, near Stourbridge—parties who are working the same, and have kindly consented to give every information.—To treat, or for drawings of same, apply to the Patentee, Mr. J. F. OATES, Erdington, near Birmingham; or to Mr. T. S. CROSS, Sole Agent and General Manager, 46, Leamington-terrace, Ravenhurst street, Birmingham.

PATENT CONCRETE STONE COMPANY (Limited).—The Directors have granted LICENCES for six of the Counties of Great Britain, and are prepared to entertain further Propositions for LICENCES for the MANUFACTURE of this valuable MATERIAL.—Plans for the erection of Works, and full instructions, on application.—By order,
THOMAS PIPER, Secretary.
36, Parliament-street, S.W. May, 1864.

MANUFACTORY at WALTON STREET.

WEARDE STONE QUARRIES, LIMITED.
The Stone produced from these Quarries has been proved to be the most durable of any in the market, and can be had in Blocks in any sizes; also for Macadamising.—Samples sent, with prices, on application to the Manager, E. M. CROKER, Gunnerslake, Cornwall.

LITTLE CASTERTON FREESTONE.
Apply, for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD,
The Owner; and see Specimen at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about 4 feet thick in the bed. It will stand ANY WEATHER, and is unaffected by water-works, and for the building and restoration of churches. When used as sashing bars it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the Kingdom.
*** The above WEATHER STONE is used largely by London Builders.

RED MANSFIELD STONE,
WHITE MANSFIELD STONE.
YELLOW MAGNESIAN or BOLSOVER LIMESTONE.
Consigned in railway trucks, direct from the Quarries, in blocks not exceeding twelve tons; or worked at the Quarries and delivered free from injury at any railway station.
Mr. ROBERT LINDLEY, Mansfield Quarries, Nottinghamshire.

TO CONTRACTORS, QUARRY OWNERS, MINERS, &c.
BLAKE'S STONE BREAKER is recommended by the best Engineers in this and other countries to Break Stone of every description, of the best quality for Macadam Roads, Concrete, Ballasting Railways, &c. It takes in large blocks or run of boulders, and reduces them to fine road metal, at a cost of from 2d. to 3d. per ton. If your pauper labourer costs 8d. per day, this machine will do more work, and do it better, at 2d.—For circular testimonials, &c. apply to
H. R. MARSDEN,
SOHO FOUNDRY, LEEDS.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet street, City. Sand from above or below Bridge, delivered by the yard or per barge. Ballast, screened or unscreened, by the yard or per barge. Stocks, Lime, and Old Bricks. Dry Rubbish delivered, per barge, in any quantity alongside the Thames.

DOULTON & WATTS, LAMBETH POTTERY,
LONDON.
In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.
Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.
FIGURE D STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

GUTTA-PERCHA MILL-BANDS.—The Gutta Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Its durability and strength, permanent contractility and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta Percha Company, and sold by their Wholesale Dealers in town and country.
THE GUTTA PERCHA COMPANY, PATENTEES, WHARF ROAD, CITY ROAD, LONDON.

CORNHILL.—Materials of a House, with premises in the rear.

PULLEN, HORNE, & EVERSFIELD are instructed by the Directors of the Commercial Union Assurance Company to SELL by AUCTION, on the PREMISES, on WEDNESDAY, SEPTEMBER 7th, at TWO, the excellent MATERIALS and FITTINGS of a large House and Shop, No. 20, Cornhill, and the Premises in the rear, comprising sound brickwork, useful timber in roofs and floors, floor boards, panelled partitioning and linings, plate-glass and other sashes, plate glass shop-front with revolving iron shutters, glazed sash-gear and other doors, stoves, chimney-pieces, &c. several tons of lead in flats, gutters, cisterns, and pipes; slate tiles, coping, and other useful materials.—May be viewed one day previous, and catalogues had of J. BELCHER, Esq. Architect, 5, Adelaide-place, London Bridge; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, City, and 45, Parliament street, Westminster.

HIGH-STREET, ST. PETER'S, BEDFORD. To Builders, Contractors, and Others.—Notice of a Succession of Auction Sales.

MR. USHER begs to announce that he is favored with instructions from Mr. G. H. Miller (who has determined on retiring from business), to dispose of the whole of his BUILDING PLANT, STOCK-IN-TRADE, and Effects, by PUBLIC AUCTION; comprising a large quantity of seasoned pitch, planks, scuntlings, and various; a large quantity of seasoned elm boards, deal boards, and battens, ash, lime-tree, poplar, &c.—To be viewed one day prior and morning of Sale.—Catalogues to be had at the Place of Sale, and of the Auctioneers, 9, Bolliter-street, E.C.

CLAPTON PARK ESTATE, Lower Clapton, Middlesex.—Eligible Freehold Building Land, finely timbered, and admirably adapted for villa residences.

MR. TAYLOR is instructed to SELL by AUCTION, at GARRAWAY'S COFFEE HOUSE, Change-alley, Cornhill, London, on TUESDAY, the 27th of SEPTEMBER, 50 Lots of FREEHOLD BUILDING LAND, in Clapton-road, near to St. John's Church, Hackney, within a few minutes' walk of the Eastern Railway-station, and suitable for the erection of detached or semi-detached villas. Nine tenths of the purchase money may remain on mortgage for any term not exceeding seven, to be paid by quarterly instalments; but the whole or any part of the balance may be paid off at any time without notice. Particulars and conditions of sale may be obtained on and after the 1st of September, at the Station House, Clapton; of T. W. ROGERS, Esq. Solicitor, 70, Fenchurch-street; at Messrs. HAMMACK & LAMBERTS, 29, Bishopsgate-street; at the Place of Sale; and of the Auctioneer, 7, Fenchurch street, London.

Renewal of Sale of Land, Clapham Junction Estate, which was suddenly stopped in the 27th July last, by the Directors of the South Western Railway Company, who by great effort, and regardless of the convenience of purchasers, prevented the same to suit its own purposes.

Mr. GEO. TODD has the pleasure to state that he has, with great care and regard to the interests of the Buyers, REPLOTTED the Land, having consequently the effect of that proposal taken by the Company; but it should be observed that the Company have a line of deviation, of which it may subsequently avail itself) over part of the Granted Land, and the buyers of that part will be liable to sell to the Company, should it choose to extend it permanent way or works in that direction.

The following is an partial description of the Property to be submitted to Public Auction:—IMPORTANT FREEHOLD INVESTMENTS, CLAPHAM JUNCTION ESTATE, Battersea, giving Votes for the County of Surrey.

MR. GEO. TODD has received instructions to SELL by AUCTION, on WEDNESDAY, 7th SEPTEMBER, at GARRAWAY'S COFFEE HOUSE, Change-alley, Cornhill, at TWELVE for ONE o'clock, the above VALUABLE FREEHOLD ESTATE, having high-ways in nearly every direction. A pretty Rural Home, and about Fifteen Acres of Building Land, in Plots, free of land-tax, and suitable for the erection of villa, cottage, and shop property, including a few eligible plots for the erection of taverns, chapels, festival halls, manufactories, builders' premises, and livery stables, and well adapted for the creation of a considerable income in FREEHOLD GROUND RENTS. This large and valuable estate, is on the South Clapham Junction Railway station, and has ample frontage to the Falcon and Lavender Roads and Penham lane, and is situated in the large and improving parish of Battersea, a short distance from Clapham and West Brompton, and within an easy walking distance of the celebrated Park and Flower Gardens at Battersea. Particulars, with a plan, may be had two clear days prior to day of sale, of Messrs. H. & F. CHESTER, Solicitors, 1, Church-row, Newington Butts; or at the Auctioneer's Offices, Battersea Bridge-road, Battersea Park, S.W.

BATTERSEA, close to Clapham Junction Railway station.

GEO. TODD will SELL by AUCTION, at GARRAWAY'S COFFEE HOUSE, Change-alley, Cornhill, on WEDNESDAY, 7th SEPTEMBER, at TWELVE for ONE o'clock, a very pretty detached Rural COTTAGE, situate in Plough lane.—Particulars may be had of Messrs. H. & F. CHESTER, solicitors, 1, Church-row, Newington-butts; or at the Auctioneer's Office, Battersea Bridge-road, Battersea Park, S.W.

STRAND HOTEL.—Fourth Clearance Sale.—By order of the Directors.

MR. JOHN R. FOWLER will SELL by AUCTION, on TUESDAY next, SEPTEMBER 6th, at TWELVE for ONE precisely, the BUILDING MATERIALS of Lyon's Inn, Newcastle-street, Strand. Catalogues at the Offices of the Auctioneer, 24, St. Swithin's-lane, E.C.

PADDOCK WOOD, KENT, and eligible adjoining this important junction between the South Eastern Railway. Plots of Land with frontage to the said new line for immediate building.

MESSRS. DEBENHAM & TEWSON will SELL, at the MAIDSTONE-ROAD INN, Paddock Wood, on WEDNESDAY, SEPTEMBER 21st, at TWO for THREE, in Lots varying from a quarter of an acre to 2 acres in extent, about 14 acres of FREEHOLD LAND (land tax redeemed), being finely undulating and the Paddock Wood station for building purposes, nursery and market-garden ground, and accommodation land. Every lot will be sold with a perfect title under the new Act, affording a clear, simple, and indisputable title, at a small proportion of cost. Two-thirds of the purchase money can remain on mortgage at 5 per cent. if required, in three years.—Particulars of T. G. BULLEN, Esq. 19, Cannon-street West; and of the Auctioneers, 80, Cheapside.

PRELIMINARY ANNOUNCEMENT.—Patent Alkali Works, St. Helen's, Lancashire. Large Sale of Buildings, Materials, &c.

MR. KIRK respectfully announces that he is instructed to Catalogue and SELL by AUCTION, the latter end of the month of SEPTEMBER, the whole of the BUILDINGS, of every description (in order that the same may be taken down, removed, and the ground cleared), forming the extensive Works known as the far-famed PATENT ALKALI WORKS, at St. Helen's, Lancashire, including extensive ranges of substantial brick buildings, blue slated roofing of the very best Welsh slates, rafters, joists, beams, planking, &c. immense in quantity and excellent in quality; cast and wrought iron work in columns, girders, tie-rods, &c.; lead flashings, gutterings, shoots, &c.; flags, tiling, &c. Also a 30 horse condensing beam-engine, large cast-iron water-tank, together with a vast assemblage of other valuable materials and effects. Full particulars in future advertisements, and catalogues, which are in course of preparation, will be ready shortly; and, in the interim, address the Auctioneer, at his Offices, 8, Essex-street, King-street, Manchester.

PIMLICO.—To Dealers in Material, Plate Glass Fronts, and Others

MR. GEO. HAINES announces for SALE by AUCTION, on MONDAY, SEPTEMBER 5, at TWELVE o'clock, all the capital BUILDING MATERIALS of Four spacious Dwelling-houses and Business Premises, in King's-row and Lower Eaton-street, with a small House attached, comprising many thousands of capital stock bricks, large roofs, with slates, tiles, and strong timbers, with the internal fittings of the numerous rooms of the usual description; three noble shop fronts, with plates of glass of large dimensions, shutters, and fittings complete; lead gutters, pipes, and cisterns, iron columns, balconies, and railings, fixtures and useful articles.—May be viewed Catalogues of Messrs. HAINES & SON, Auctioneers, Moorgate-street; and at the Auctioneer's Offices, Pimlico, and No. 12, High-street, Kensington.

BUSHY PARK ESTATE, Upper Teddington, abutting on the Royal Park.—About ten acres of most valuable Freehold Building Land in this favoured locality.

MESSRS. GADSDEN & ELLIS will SELL by AUCTION, at the GUILDHALL COFFEE-HOUSE, near the Guildhall, Gresham-street, on THURSDAY, OCTOBER 13, at TWELVE for ONE (unless an acceptable offer be previously made by private contract), in one lot; but if not sold it will immediately be offered in several lots, as shown in particulars, about TEN ACRES of FREEHOLD LAND, having a commanding frontage, abutting on and overlooking Bushy Park, on the road from Teddington to Hampton. Immediately opposite are several first class family residences, enjoying highly ornamental and botanical features, enclosed, and finished regardless of expense, securing the superior character of the neighbourhood. A new church also is in course of erection adjoining the estate. Spring water is readily obtained, and gas and water are laid up to the property. The access is most convenient to City or West-end, by two lines of railways.—Particulars may shortly be obtained of Messrs. PALMER & BULL, Solicitors, 84, Bedford-row; at the Guildhall Coffee-house, Gresham street; and of Messrs. GADSDEN & ELLIS, 18, Old Broad street, E.C.

KEMPTON PARK ESTATE.—Hampton, on the high road to Sunbury, and adjacent to the River.—Twenty-four Acres of Freehold Building Land, full of the finest brick earth, fit to make the best stock bricks.

MESSRS. GADSDEN & ELLIS are instructed to SELL by AUCTION, at the GUILDHALL COFFEEHOUSE, near the Guildhall, Gresham-street, on THURSDAY, OCTOBER 13, at TWELVE for ONE, in one or more lots, TWENTY-FOUR ACRES of FREEHOLD LAND, with roads formed, and ready for immediate building operations, situate between the upper and lower roads from Hampton to Sunbury, and within five minutes' walk of the station on the Thames Valley Railway, which will be open almost immediately. The land lies close to several admired residences and estates, and commands fine views over the Thames and surrounding scenery, and is well deserving the attention of capitalists and builders.—Particulars may shortly be obtained of Messrs. PATERSON & LONGMAN, Solicitors, No. 3, Winchester-buildings, E.C.; at the Guildhall Coffee-house, Gresham street; and of Messrs. GADSDEN & ELLIS, 18, Old Broad-street

On MONDAY, SEPTEMBER 12, at ELEVEN for TWELVE,

MESSRS. LEREW & LEREW will SELL by AUCTION, on the PREMISES, Camden-terrace, Camden-Town, near the Old Eagle, the STOCK, viz.—Ten loads of Swede timber, pine, yellow and white planks, deals and battens, prepared flooring and pine boards, quarter boards, mouldings, stuff, 2,000 feet run of cast-iron sash-frames, 10 ladders, 20 doors, and a large quantity of excellent building materials.—Auction Offices, Cardington-street, Hampstead-road

PRELIMINARY ANNOUNCEMENT.—Vulcan Works, Church, near Accrington and Blackburn.

MR. KIRK is favoured with instructions from the Assignees of Mr. Lupton, to arrange, catalogue, and SELL by AUCTION, under a deed of assignment, for the benefit of the creditors, early in SEPTEMBER, the whole of the valuable TOOLS, Utensils, Plant, Machinery, Steam-engines, Boilers, Stock-in-Trade, &c. in the works, foundry, fitting-shops, smiths' shops, stores, &c. on these extensive works.—Full particulars of which will be given in detailed catalogues, which are being prepared, and will be ready shortly; and may be had of Messrs. HALL & BALDWIN, Solicitors, Clitheroe, and also of the Auctioneer, at his Offices, 8, Essex-street, King street, Manchester

OLD BUILDING MATERIALS.—To BE SOLD by AUCTION, by

MR. B. ABBOTT, Jun. at Marlborough-place near the Load Nelson, Old Kent-road, on MONDAY next, the 5th of SEPTEMBER, a large quantity of first-rate BUILDING MATERIALS, consisting of 6-4 doors and linings, sashes and frames, modern cornices, stone paving, 7,000 best lime stocks, joists 9 inches by 3 inches, long sound oak and fir timber joists and plates, 1,000 feet run of strong boarding, modern iron railings, sashes, wardrobes, book-cases, &c. &c. &c.—Catalogues may be had on the Premises; or on application to Mr. B. ABBOTT, Jun. Auctioneer, Grace-church-street, City.

TO TIMBER MERCHANTS, BUILDERS, AND OTHERS

MESSRS. J. J. CLEMMANS & SON will SELL by AUCTION, on the PREMISES, Nos. 212 and 214, Rosemary-road, on WEDNESDAY, SEPTEMBER 14th, 1864, at SEVEN, by order of Mr. Rosemary, who is demolishing the retail trade, the remaining well-seasoned STOCK, comprising 80,000 feet of prime Spanish and Honduras Mahogany; 10,000 feet of walnut, rosewood, &c.; 50,000 walnut and other veneers; 1,000 planks and boards, useful cut stuff, &c. Approved bill will be taken over 20l.—On view the day prior.—Catalogues on the Premises, and of the Auctioneers, Holywell-row, Finsbury-square.—To Let or the unexpired Yard, with few Dwelling-houses, to be Sold.

BLACKHEATH.—A Gentleman is desirous of DISPOSING of PLOTS of FREEHOLD and LEASEHOLD LAND, forming eligible sites for private residences, and being within three minutes' walk of the railway station.—For terms and particulars, address Mr. F. F. HOPKINS, Architect and Surveyor, 4, Colebrooke-row, Grace-church street, and Lee, Kent.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception rooms, two being 36 feet in length, eleven bed-rooms; stabling for eight horses and coach-houses for four carriages; suitable servants' offices; extensive ornamental grounds, with greenhouses, in all 28 acres; gravelly soil; near Sunningdale Station, South Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. BOWEN MAY, Esq. solicitor, 6, Russel square.

LARGE BUSINESS PREMISES, TO BE LET, or the LEASE TO BE SOLD (near the Baker street station of the Metropolitan Railway). Held for many years, now occupied by an engineer, and suitable for various manufacturing purposes, or for occupation by a builder or carpenter. His waggon entrance, large workshops and yard, with lofts and stores over. A steam engine and boiler are in the premises. For particulars and to view, apply to H. CLAYTON & CO. Brick and Tile Machine Makers, Atlas Works, Upper Park place, Dorset square, N.W.

FREEHOLD LAND TO BE SOLD or LET on BUILDING LEASES, in Glengall-road, Old Kent-road,

AND ALSO near Forest-hill Station.

ALSO FREEHOLD WHARF on the Surrey Canal, near Old Kent-road.—Apply to Mr MAY, Acorn Timber Wharf, Old Kent-road.

TWICKENHAM PARK near RICHMOND. Most Eligible BUILDING LAND to BE LET on Lease, for Ninety-nine Years, in Large or Small Plots. Money advanced, if required.—For particulars, apply to W. BACKHURST, at the Estate Offices, Twickenham Park; or EDWARD GUILLAUME, Esq. 14, George-street, Mansion House, London.

FREEHOLD LAND TO BE LET, on Building Leases, at low ground-rents, on the estate of the Carpenters' Company, at Stratford, Essex, close to the Station and the High-street; one portion with river frontage, for the erection of manufactories, and another for small houses or cottages.—For plans and particulars, apply at the Clerk's Office, Carpenters' Hall, London-wall.

IRON FOUNDRY TO BE LET, with immediate possession, established thirteen years. Rent low, and to suit only a small capital for meeting.—For particulars apply to H. CLAYTON & CO. Brick and Tile Machine Makers, Atlas Works, Upper Park-place, Dorset-square, London, N.W.

BROMLEY, KENT.—Beautiful FREEHOLD BUILDING SITES, with a registered title under the new Act, adjoining the Shortlands Station on the Mid Kent Railway. Messrs. DEBENHAM & TEWSON beg to announce that the title to the Shortlands Estate having been investigated and approved by the Court of Registry, they are now in a position to SELL any of the remaining LOTS, with a registered and indefeasible title; the effect of which will be to reduce the present and all future purchasers' legal expenses to an almost nominal amount, the immense advantage of which to all purchasers, and especially to those intending to deal with or build upon them, can hardly be over-estimated, as not only will the title henceforth be absolutely indisputable, but sales of the whole or any portion, or of leases to be built thereon, will be as simple and inexpensive as the transfer of a ship or money in the funds. This advantage, in addition to the proposed supply of water by the Kent Waterworks, and of gas by the Bromley Gas Company, cannot fail to render any building operations on an extensive scale an eminently remunerative one. The sites, which lie very high, vary in extent from 1 to 13 acres, with an undulating surface and a varying soil of gravel, sand, and clay. They are within a few minutes' walk of the Shortlands Station, and only ten miles from London Bridge.—For particulars and plans may be obtained of Messrs. DEBENHAM & TEWSON, 80, Cheapside.

NEWLY and most substantially erected WAREHOUSES and LAND, occupying an area of nearly half an acre, near the entrance to the London Docks, well adapted for bonded warehouses, TO BE LET on LEASE, or the Freehold to be sold.—Apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

SURBITON.—TO BUILDERS and OTHERS.—LAND TO BE LET, on building leases, five minutes' walk from the station, and close to the river, for houses of not less than 30l. a year rent. A portion of the money will be advanced if required.—Apply to Mr. MUDIE, Victoria-rd, Surbiton.

TO TIMBER MERCHANTS or STONE MASONS.—A good HOUSE, with ground 150 feet in length, TO BE LET on LEASE, near the Canal.—Apply to A. B. care of Mr. Pearson, Stationer, Park-road, Peckham.

LONDON BRIDGE (NEAR).—TO BE SOLD, the LONG LEASE and possession of a large HOUSE and SHOP in the main road, with a newly erected large light Four-storied Warehouse behind, in the rear, suitable for any trade requiring both space and publicity. Will be let together or separately.—Apply at Estate Office, 21, Walbrook, City.

LAND TO BE LET, by Tender, on the 29th SEPTEMBER, by the Fishmongers' Company, on a BUILDING LEASE, for ninety years, situate on the east side of Pudding-lane, in the centre of the fruit market, containing a frontage of 36 feet 6 inches, with a medium depth of about 70 feet, highly suitable for warehouses, shops, or other business premises.—At, or to Mr. W. B. TOWSE, Fishmongers' Hall, London Bridge; or to Mr. RICHARD SI TER, Architect and Surveyor, No. 29, Great-church-street, where plans and particulars may be seen. Tenders to be delivered before TWELVE o'clock on the 29th SEPTEMBER, 1864

FREEHOLD BUILDING LAND, on the Borders of the City.—TO BE LET, on a Building Lease, TWO Eligible SITES, in Bunhill-row and Chiswell-street, on the borders of the City of London, suitable for warehouses, manufacturing premises, or stabling. One extends 51 ft. 3 ins. more feet; the other 1,760 square feet.—Apply to Messrs. DEBENHAM & TEWSON, No 80, Cheapside.

VALUABLE and Extensive Waterside PREMISES, close to Queen street and Southwark Bridge, in the City of London.—To Wharfingers, Bonded Warehousemen, and Others.—TO BE LET, the Extensive BLOCK of Newly built WAREHOUSES known as Queenhithe Dock, having a frontage of 140 feet to the River Thames and almost entire use of the dock, where vessels of 150 tons can lay by.—Further particulars of Messrs. DEBENHAM & TEWSON, 80, Cheapside.

WANTED to RENT, with option of Purchase, LAND, containing good brick earth.—Apply in writing, with full particulars, M. care of S. Hewitt, 101, Great Russell-street, Bloomsbury, W.C.

TO CAPITALISTS.—FREEHOLD PROPERTY in St. Leonard's road, Poplar To BE SOLD, suitable for any business, the building in good repair, substantial new.—For further share, apply by letter to J. T. E. Metropolitan Tavern, Great Western-terrace, Westbourne-park, Paddington. No agents need apply.

TO CARPENTERS, BUILDERS, and OTHERS.—TO BE SOLD (together or separately), FOUR TEN ROOM HOUSES, pleasantly situated, and close to the Kent-street town and Hampstead Railway. Easy direct from freeholder.—Apply to Mr. MOLL, 6, Furnival's-inn, or Mr. J. FURNELL, 1, Arthur-grove Oak Village, Kentish-town.

DENT'S TURRET CLOCKS.—The attention of Public Bodies, Gentlemen, and others, is respectfully requested to the improvements made in the Construction of CLOCKS, suitable for PARISH CHURCHES, and other large Buildings, by the late E. J. DENT and E. DENT, Clock and Chronometer Makers to the Queen and Prince Consort, and Makers of the GREAT CLOCK for the HOUSES of PARLIAMENT, as Turret Clocks, with Compensation Pendulum, and keyless Watches of temperature, to work the hands of dials of any size, from 1 foot to 21 feet diameter.

E. DENT & CO. 61, STRAND (adjoining Coutts's Bank); and 34 and 35, ROYAL EXCHANGE, LONDON.

FAIRER'S TURRET CLOCKS,

188, St. George-street East, London. By Special Appointments to the Queen and to his late Royal Highness the Prince Consort, her Majesty's War Department, &c. Maker of the Great Clock of the Tower of London. The Vestry Clock, price 45 guineas.

London:—Printed by CHARLES WYMAN, Printer, at the Printing-office of COX & WYMAN, No. 74 and 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Paul, Covent-garden, in the said CHARLES WYMAN, at the Office of "THE BUILDER," No. 1, York-street, in the Parish of St. Paul, Covent-garden, both in the County of Middlesex.—Saturday, September 3, 1864.

BUILDERS' BENEVOLENT INSTITUTION. The SEVENTEENTH ANNUAL DINNER will be held at the LONDON TAVERN, on THURSDAY, 27th OCTOBER, next, THOMAS C. LUCAS, Esq., President of the Institution, in the Chair. Gentlemen desirous of promoting the interests of this charity by becoming Stewards will be pleased to forward their names to the Treasurer, GEORGE PLUCKNETT, Esq. (Messrs. Wm. Cubitt & Co.), 28, Gray's Inn road, or to the Secretary, at the Offices, 24, Southampton-street, Bloomsbury, W.C. A. G. HARRIS, Sec.

ANNUAL EXHIBITION of STAINED GLASS at the SOUTH KENSINGTON MUSEUM, MAY, 1865. The Lords of the Committee of Privy Council on Education have placed at the disposal of the producers of Stained Glass in the United Kingdom a space in the South Kensington Museum for the Exhibition of Stained Glass, of a highly artistic character, in the year 1865. For the most part the space will be the same as this year.

Applications for space and particulars to be made on or before the 31st OCTOBER, 1864, addressed to the Secretary, Science and Art Department, South Kensington Museum, W.

By order of the Lords of the
Committee of Privy Council on Education

AUTUMN EXHIBITION of BUILDING MATERIALS, INVENTIONS, EXAMPLES of CONSTRUCTION, &c. at the GALLERIES of the ARCHITECTURAL SOCIETIES, 9, Conduit-street, Regent-street, W. Exhibitors are requested to fill up the Papers as soon as possible. The Exhibition will be open daily to the public free, from ELEVEN till FOUR, from SEPTEMBER to FEBRUARY.—For space, apply to Mr. MOODY, Secretary, on the Premises.

SCOTTISH NATIONAL MEMORIAL to H.R.H. the PRINCE CONSORT.—The Committee of Advice from nobility, by her Majesty are now prepared to receive DESIGNS to be submitted to her Majesty for the SCOTTISH NATIONAL MEMORIAL to the PRINCE CONSORT about to be erected in Edinburgh, or the immediate neighbourhood. Of the Sites which have been suggested for the Memorial, the most eligible appear to be—

1. A knoll on the Spur or Ridge running NNE. from Arthur's Seat, and about 540 feet above the sea.
2. West Princes-street Gardens, at the foot of Frederick street or Castle street.
3. Eastside of Calcdonia Square Garden, facing George-street.
4. The Queen's Park, in the immediate neighbourhood of Holyrood Palace.

The Committee, however, desire especially to direct the attention of artists to the first named of these sites, which offers many advantages. A national memorial in that commanding position would be seen by persons approaching Edinburgh at a greater distance, and from a wider circle both of the city and the country, than in any other available position. At the same time, it is not desired absolutely to preclude the suggestion of any other site which an artist may consider peculiarly suitable for his design. The amount of Fund at the disposal of the Committee for the erection of the Memorial is £2,000; and the Committee regret that they are therefore unable to offer premiums or remunerate any unsuccessful competitor for his design. It is requested that all models and drawings, not already prepared, may be furnished on a scale of one inch to the foot. No Designs can be received after the TENTH day of DECEMBER next.

12a, George-street, Edinburgh. W. S. WALKER, Hon. Sec.
31st August, 1864.

BILLING'S PATENTS. CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow an Interest in the same, and have considerably reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new Buildings.—For prices, apply to the Manager, Mr. TYLER, 19, Abingdon-street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical caring of Smoky Chimneys.

BY Order of the Secretary of State for India in Council.—NOTICE is hereby given, that TWENTY-FIVE APPOINTMENTS in the Upper Class of the ELECTRIC TELEGRAPH DEPARTMENT in INDIA will, in the year 1865, be open to PUBLIC COMPETITION.

A COMPETITIVE EXAMINATION will, accordingly, be held in this Office in the month of MAY next.—Full printed particulars of the conditions on which candidates will be admitted to the examination, and also respecting the nature of the appointments to be competed for, may be obtained at the Office, on application, either personally or by letter, addressed to the "Under Secretary of State for India," India Office, London, S.W.

India Office, 1st July, 1864.

THE ARCHITECTURAL MUSEUM, SOUTH KENSINGTON MUSEUM, W.

The following PRIZES to ART-WORKMEN are now offered:—

For Wood carving 2*l.* and 1*o*.

For Silver Work, 1*o*. and 5*s*. (the latter given by Mr. H. Heather Bigg, of Wimpole street).

For Transparent Enamels, 10*s*. (given by the Ecclesiological Society and Mr. Beresford Hope).

For Opaque Enamels, 10*s*. (given by Mr. Ruskin).

Smaller Prizes will be added at the discretion of the Council.

Full particulars may be had either by a letter to the Honorary Secretary, at 13, Stratford-place, London, W. inclosing a directed and stamped envelope; or of the Attendant at the entrance to the South Kensington Museum; or at the Office of "The Builder," York-street, Covent garden.

A. J. B. BERESFORD HOPE, President.
GEO. GILBERT SCOTT, Treasurer.
JOSEPH CLARKE, Honorary Secretary.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72—74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger Stock of their Patent Prize Medal Ranges and Stoves, Cooking Utensils, &c. to meet the great public demand; and also for the establishment more extensive execution of all descriptions of hot water, bath, dairy, and steam work.

72—74, Bishopsgate street Within.

CONTRACTS.

BLACKFRIARS BRIDGE. — TENDERS will be received for the OLD STONE of this Bridge, consisting of Portland granite in Backing and Steps, Roach, Portland, and rough rubble. Also for the Balcony columns, with moulded bases and carved caps.—Apply to Messrs. THORN & CO. Contractors, on the Bridge

TO CONTRACTORS.—The Proprietors of Charlestown Harbour, near Saint Austell, Cornwall, are prepared to receive TENDERS for the ENLARGEMENT of the DOCK, and the CONSTRUCTION of a BRANCH RAILWAY to connect the Harbour with the Cornwall Railway.—Plans, sections, and specifications may be seen, on and after MONDAY, the 12th inst. at the Proprietors' Offices, Charlestown; at the Offices of OLIVER GREEN, Esq., 4, Mitre court Chambers, Temple, London; and at Mr. WM. ROBERTS, Llanelly. Tenders to be addressed to the care of OLIVER GREEN, Esq. as above, not later than the 5th of SEPTEMBER, 1864. The Proprietors do not bind themselves to accept the lowest or any Tender.

BUILDERS and CONTRACTORS willing to TENDER for REPAIRS and ERECTION of Additional BUILDINGS required at Sanitary Hall, near Stratford-on-Avon, may inspect plans, specification, and conditions of Contract, at the Office of Mr. JOSEPH LATIMER, Architect and Surveyor, Stratford-on-Avon. Particulars, Captain DOUGLAS GALTON, Royal Naval Hospital, Greenwich, to whom Tenders are to be forwarded. The Proprietor will not bind himself to accept the lowest or any Tender.

August 31st, 1864.

CROSSLAND, New Coin Exchange, Leeds, on and after MONDAY, the 12th day of SEPTEMBER. Tenders to be delivered to the Honorary Secretaries of the Leeds Mechanics' Institution, Saint Ann's Parade, not later than MONDAY, the 26th day of SEPTEMBER, inst. The lowest or any Tender will not necessarily be accepted.—By order,

H. WADMAN, } Hon. Secs.
W. J. NEILD, }

August 25, 1864.

COMPETITIONS.

THE Town Council of Funchal, Island of Madeira, elect PLANS and ESTIMATES for a BUILDING adapted to the following Purposes, viz.:—The Vestry Room and Law Courts, Police and Local Tax Offices &c. The cost of the entire building, if all may not to exceed 8,000l. sterling. FIFTY POUNDS will be paid for the accepted plan, and FIFTEEN POUNDS for the next approved. The unapproved plans will be returned. A proper plan of the ground, proposed for the erecting of buildings, can be seen, and further particulars may be obtained on application at the Town Council Office in Funchal, Island, as before stated, to C. R. BLANDY, 25, Crutched-friars, London, E.C.; GEORGE BOLDERO, 19, Rue d'Hauteville, Paris, for London to ORCHARD, Wharf-street, Philadelphia. The plans and estimates to be delivered in London, Paris, or Philadelphia, on or before NOVEMBER 8th, 1864.

TO ARCHITECTS, &c.—COMPETITION PLANS for NEW MARKET-HOUSE and PUBLIC HALL for the town of Farnham, Surrey.—The Directors of the Farnham Market House and Public Hall Company (Limited), invite Architects to furnish PLANS, with SECTIONS, for the above, to be prepared all one, the cost of which is not to exceed 5,000l. A premium of 75l will be given for the plan selected to be adopted, and a premium of 25l for the second best. The plans of the successful competitor to be the property of the Company, and no payment will be made to unsuccessful designs. Should the author of the last-named be appointed Architect to the building, he is to receive a reward will be made upon the commission that may become payable to him. Full particulars may be obtained at Mr HENRY POTTER, Farnham Secretary to the Company. The plans must be sent to the undersigned, with the signatures, with a private mark, or motto, and a letter accompanying them, also to be sealed, containing the same mark or motto, and the designer's name and address. They must be addressed to the Chairman of the above Company, at the Castle-street, Farnham, and be received before the 31st day of NOVEMBER next.

Farnham, 31st August, 1864.

TO ARCHITECTS.—The SIR TATTON SYKES MEMORIAL.—The Committee for the Erection of a Memorial to the late Sir Tatton Sykes, Bart. are prepared to receive DESIGNS and ESTIMATES for the ERECTION of a COLUMN, on an elevated site on the Sledmere Estate, on the York-Shire Wolds, near Driffield. Designs and Estimates to be sent to the Honorary Secretary, on or before the 3rd day of OCTOBER next. Twenty pounds will be given for the design considered the most suitable by the Committee, and ten pounds for the second-best design.—Particulars to be had on application to

WM. TOPHAM,
Driffield, 1st August, 1864. F. C. MATTHEWS, } Hon. Secs.

PROPOSED CEMETERY at BURTON-UPON-TRENT.—To ARCHITECTS, LANDSCAPE GARDENERS &c.—The Burton-upon-Trent Improvement Commissioners, who are now applying a Public Act for the town of Burton-upon-Trent, are about obtaining PLANS, ESTIMATES, and GENERAL SPECIFICATIONS for the ERECTION of TWO CHAPELS, Residences for the Resident Officers, Entrance Lodges, Gates, Railings, Fences and Walls; Laying out and Planting New Roads and Footpaths in the proposed Cemetery, consisting of 12 acres; the whole cost, exclusive of the purchase of the land, not to exceed 6,000l. A premium of 50l will be given for the most approved plans, estimates, and specifications, and 25l for the second best. Should the Author of the approved plans be employed in carrying out the works, the premium of 50l will be added to the Architect's commission. A liberal plan of laying out the ground, and any further information, may be obtained on application to me on and after the 12th day of SEPTEMBER next; and the plans, &c. are required to be sent in a letter with a motto, are to be forwarded to me on or before the 12th day of OCTOBER, 1864.—By order of the Board,

WILLIAM CONON, Clerk.

Public Offices, 77, High-street, Burton-upon-Trent.

TO ENGINEERS, MILLWRIGHTS, &c. COMPETITION PLANS.—The Visiting Justices of the House of Correction, at Cold Bath Fields, Clerkenwell, are desirous of obtaining PLANS for the CONSTRUCTION of a SET of TREADWHEELS at that Prison, of such efficient cost and strength as they may deem at one time. The length of the shed in which the wheels are to be erected is 102 feet; breadth, 19 feet; height, 21 feet. Each plan is to be accompanied by an estimate of the cost, and a description of the proposed works; and must be forwarded to the Prison, with some motto or mark, and the name and address of the Tender, in a sealed letter, bearing the same motto or mark, by WEDNESDAY, the 5th of OCTOBER next. The Visiting Justices will give a premium of 25l. to the author of the plan they shall deem to be approved of by them, and this plan is to become their property, but they do not hold themselves to adopt it, either partly or entirely, or to employ the author to construct, provide, or superintend the construction of the works.—Any further information may be obtained by application at the Prison, on any Monday, Tuesday, or Wednesday, between TEN and ONE.

JOHN S. SCALE, Clerk to the Visiting Justices.

August 25, 1864.

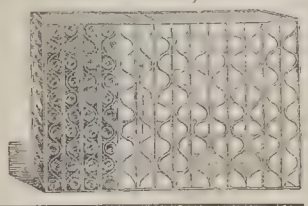
WROUGHT IRON WINE BINS.

FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING nearly FORTY YEARS.



The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.

ALSO THEIR

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with SEPARATE REST FOR EACH BOTTLE,
Peculiarly adapted for Private Cellars.
No laths are required, and all trouble of Binning is avoided. The Cellular Bins may also be had fitted with light lattice doors, affording perfect security to the contents of the Bin.

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.
The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.
It is entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.
EXTRACTED from the "London Daily Telegraph," May 19th, 1862.
"INTERNATIONAL EXHIBITION (Class 51.
"Of the most important inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the Jurors. A special peculiarity of these Ranges is the placing of the OVEN and ROASTER one above the other instead of side by side; and ROASTER is constantly replenished with fresh air."

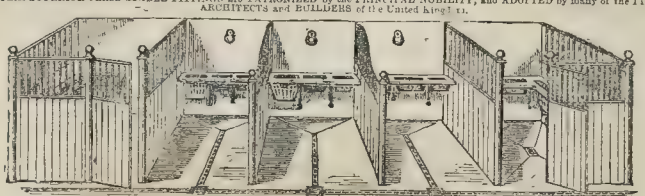
SIMPLICITY, UTILITY, ECONOMY, AND DURABILITY.
THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.



NUT PLATE.

J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)
WHOLESALE IRONMONGERS,
13, KING STREET, SNOW HILL, LONDON.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both Rim and Mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.
New rich Designs in Glass, China, Brass, Bronzed, Gilt, Carved Woods, Inlaid, &c. &c. or to any Design.
THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.
A most complete and extensive stock of every description of Locks, Latches, Brass Foundry, and Ironmongery, required for Buildings, of the best quality manufactured, at the lowest wholesale prices.
. Illustrations and Particulars sent on application.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.

They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

Musgrave's Patent Slow-combustion Stove

Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. Its kalo will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 3d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

THE FURNISHING OF BED-ROOMS.

HEAL & SON have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed-room Furniture than is usually displayed, and that to judge properly of the style most effective in different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large additional show-rooms, by which they are enabled not only to extend their Show of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete suites of Bed-room Furniture in the different styles.

Spanned Deal Goods may be seen in complete suites of five or six different colours, some of them light and ornamental, and others of a plainer description. Suites of Stained Deal Gothic Furniture, Polished Deal, Oak, and Walnut are also set apart in separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture, in various woods will be added.

Bed Furnitures are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.

A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.

The Stock of Mahogany Goods for the better Bed-rooms, and Japanned Goods for plain and servants' use, is very greatly increased. The entire Stock is arranged in eight rooms, six galleries (each 120 feet long), and two large ground-floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.

Every attention is paid to the manufacture of the Cabinet work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their own immediate care.

Their Bedding trade receives their constant and personal attention, every article being made on the premises.

They particularly call attention to their Patent Spring Mattress, the Sommier Elastique Portatif. It is portable, durable, and elastic, and lower in price than the old Spring Mattress.

HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free by Post.—196, 197, 198, Tottenham Court-road, London.

SAVING IN GAS.

5 & 6, PHILPOT LANE,

LONDON, E.C.

Works: MARTIN STREET, STRATFORD, E.

"By Royal Letters Patent."

"Indicator" Dial, 2½ in. diameter.

ELECTRIC BELLS FOR DOMESTIC USE.

BREGUET'S PATENT INDICATOR SYSTEM, with a Dial which shows when the Bell is ringing, the same as in use at the Grand Hotel, Boulevard des Capucines, Jockey Club, &c. Paris.

The superiority of Electric Bells is already settled in America and in France. For all modern works at Paris they have as effectually superseded the old crank and pull plan as, for travelling, the railway has superseded the antiquated stage-coach.

ADAMS & SON have much pleasure in stating that they have made arrangements with Messrs Breguet, of Paris, to become their sole Agents for the sale and fixing of their Patented Apparatus upon the "indicator system," which has great advantages over all others, and is especially adapted for hotels, public buildings, and other large establishments. The details of this ingenious instrument, together with a description of the various apparatus in use for Electric Bells, may be had upon application, or by post.

WILLIAM S. ADAMS & SON,

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.

ESTABLISHED 1744.

AUSTIN'S IMPERIAL PATENT SASH

and BLIND LINES.

To BUILDERS, CARPENTERS, and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and his strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which are little better than the SLEAZOTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

ROBERT MACLAREN & CO.

EGLINTON FOUNDRY, GLASGOW.

GAS BURNER and FITTING ESTIMATES

Offer important advantages to Architects, Builders, and the Public generally.—GARDNER'S, No. 453, Strand, Charing-cross, four doors from Trafalgar-square, London.

ESTABLISHED 1752

IRON CASTINGS.

FLINTOFF, TREGELLES, & COMPANY,

Mid Rhondda.

Estimates given for Building, Railway and Machinery Castings of any size, and immediate delivery. London Agents, H. J. WALDUCK & CO. 11, Old Jewry-chambers, London, E.C.

VICTORIA MARBLE WORKS,

28, LOWER BELGRAVE PLACE, adjoining the Victoria Railway Station, and at Commercial-road, Pimlico, London.

JOHN WREN

Begs to inform Architects, Sculptors, Builders, &c. he has OPENED the above extensive Premises with convenient SHOW-ROOMS, well stocked with CHIMNEY PIECES of the most modern designs and superior workmanship, and at the lowest possible prices

N.B.—Estimates given. Country and foreign orders executed with promptness and personal attention.

PATENT CONCRETE STONE COMPANY (Limited).—The Directors have granted LICENCES for six of the Counties of Great Britain, and are prepared to entertain further Proposals for LICENCES for the MANUFACTURE of this valuable MATERIAL.—Plans for the erection of Works, and full instructions, on application.—By order,

THOMAS PIPER, Secretary.

36, Parliament-street, S.W. May, 1864.

PORTLAND STONE.

Portland Slab, Paving, Landings, and Scantling of every size sawn by steam, always kept in stock; also York Paving and Landings, Steps, Stone, and Marble Saw Mills, Cremorne Wharf, Chelsea, and Grosvenor-road, Pimlico.

THORN & CO. Stone Merchants and Contractors

BELLMAN & IVEY,

GENERAL AND ORNAMENTAL PLASTERERS,

Manufacturers of

SCAGLIOLA MARBLE

and

SUPERIOR PLASTER OF PARIS.

This Plaster, made expressly for their own business, is of excellent quality, and its extreme lightness in weight ensures a saving of 30 per cent in use, from its covering one-third more superficies than the general plaster.

PRIZE MEDALS

were awarded Messrs. Bellman & Ivey for their Works at the Exhibition of 1851, and again in 1862.

PLASTER WORKS, 3, BEDFORD-STREET, LIQUORPOND STREET, LONDON, E.C.

SHOW ROOMS AND OFFICE,

14, BUCKINGHAM-STREET, PORTLAND-ROAD LONDON, W.

ABERDEEN POLISHED GRANITE

WORKS.—Awarded Prize Medal in 1851, Silver Medal in 1855, and Two Prize Medals in 1862.

Red, Blue, and Grey Granite for every description of architectural construction, decoration, memorials, and general purposes.

Apply to ALEX. MACDONALD, FIELD, & CO. Aberdeen: and at London Depôt, 464 Euston-road, N.W.—DAVID WILLIS, Agent.

W. & J. FREEMAN, Merchants in the various descriptions of STONE, GRANITE, and SLATE, for Engineering and Building Purposes. Supplied direct from the Quarries, by vessel or railway. Direct communication with the principal ports for EXPORTATION. Wharf prices and estimates for special contracts, including quarry, work or other labour, forwarded on application.—Office, 27, Millbank street, London, S.W.

DARTMOOR GRANITE.—The Dartmoor Granite Quarries, lately belonging to the Haytor Granite Company, are now worked by the Dartmoor Granite Company, of Laira Wharf, Plymouth, and Portland Wharf, Grosvenor-road, Pimlico, London. For prices, &c. apply to W. H. HOLLAND, Agent and Manager for the Company, Portland Wharf, 20, Grosvenor-road, Pimlico, S.W.

HY. GEORGE & CO.

MARBLE IMPORTERS and SLATE DEALERS

GENERAL STONE MERCHANTS,

CAEN WHARF, ROTHERHITHE, S.E. and

WILLINGTON WHARF, RENFREW'S PARK BASIN.

Caen, Aubigny, Portland, Bath, Yorkshire, Granite, and all other stones, in blocks and slabs, sawn, self-faced, and worked to order. Toole's Paving, Landings, Steps, &c. At Depôts, and shipped direct by vessels, or railway.

SERPENTINE,

large size and great variety,

EQUAL TO GRANITE IN DURABILITY;

adapted for TOMBS, COLUMNS, CHIMNEY PIECES, and all purposes for which MARBLE and GRANITE are used.

Manufactured by

THE LIZARD SERPENTINE COMPANY (Limited),

Office, 24, St. James's-street, London, S.W.; Works, Carleon Cove, Lizard, Cornwall.

Agent for Manchester and Liverpool, T. OAKDEN, 94, King-street.

CAEN and AUBIGNY STONE.

FOUCARD, BROTHERS,

STONE MERCHANTS and QUARRYMEN.

Cargoes shipped to order from Caen to any port. Contracts taken for any quantities.

Office—10, Three Crown square, South-wark.

G. MITCHELL,

MARBLE, STONE, and GRANITE WORKS.

SHOWROOMS:—

No. 156, BROMPTON ROAD, LONDON, S.W.; where Architects, Builders, and Monumental Masons will find the largest and best stock of CHIMNEY-PIECES and MONUMENTS in London; of which Books, Catalogues, and Sheets of Monuments will be forwarded on application.

Estimates will meet with prompt attention.

MANUFACTORY at WALTON STREET.

WEARDE STONE QUARRIES,

LIMITED.

The Stone produced from these Quarries has been proved to be the most durable of any in the market, and can be had for Paving in any size; also for Macadamising. Samples sent, with prices, on application to the Manager, E. M. CROKER, Gunnislake, Cornwall.

LITTLE CASTERTON FREESTONE.

Apply, for prices, &c. to

OCTAVIUS N. SIMPSON, STAMFORD,

The Owner; and see Specimen at the Museum of Practical Geology, Jermyn-street, W.

This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about 4 feet thick in the bed. It will stand ANY WEATHER, is much used for water works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

*** The above WEATHER STONE is used largely by London Builders.

RED MANSFIELD STONE,

WHITE MANSFIELD STONE.

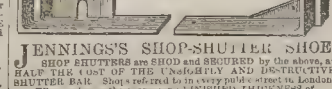
YELLOW MAGNESIAN or BOLSOVER LIMESTONE.

Consigned in railway trucks, direct from the Quarries, in blocks not exceeding twelve tons; or worked at the Quarries and delivered free from injury at any railway station.

Mr. ROBERT LINDLEY, Mansfield Quarries, Nottinghamshire.

TO CONTRACTORS, QUARRY OWNERS, MINERS, &c.

BLAKE'S STONE BREAKER



is recommended by the first Engineers in this and other countries to Break Stone of every description, of the best quality for Macadam, Roads, Concrete, Ballasting Railways, &c. It takes the large blocks or round boulders, and reduces them to fine road metal, at a cost of from 2½d. to 3d. per ton. If your present breaker costs 8d. per ton, this machine will do more work, and do it better, at 2½d.—For circular testimonials, &c. apply to

H. R. MARSDEN,

SOHO FOUNDRY, LEEDS.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand from above or below Bridge, delivered by the yard or per barge. Ballast, screened or unscreened, by the yard or per barge. Stocks, Lime, and Old Bricks. Dry rubbish delivered, per barge, in any quantity alongside the Thames.

NO SHUTTER BARS.

JENNINGS'S SHOP-SHUTTER SHOE.

SHOP SHUTTERS are SHOD and SECURED by the above, at HALF THE COST OF THE USELESS AND DESTRUCTIVE SHUTTER BAR. Shops refitted to in every public street in London.

When ordering the shoes, send FINISHED THICKNESS of shutters, and the way they go up.

Sold by all Ironmongers, and the Inventor,

GEORGE JENNINGS,

Engineering Depot, Pelton Wharf, Stangate, Lambeth, S.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.

PICTOR & SONS, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

ARCHITECTS, BUILDERS, MERCHANTS, SHIPPERS, AND MASONS

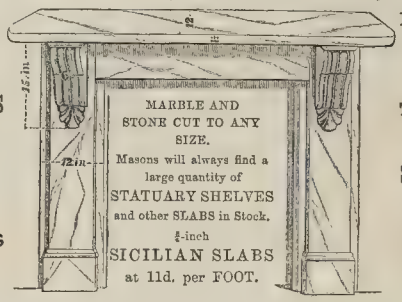
Will find that the CHEAPEST HOUSE in LONDON for the following Goods is at the

EMPORIUM, J. W. BIRD & CO.'s, 143½ and 145, EUSTON ROAD, N.W.

BOX STONE CHIMNEY PIECES for 5s. 6d.

Truss ditto ditto, 11s. 9d.

MONUMENTS AND TABLETS



in great variety, equally low in price.

MASONS' WORK OF ALL KINDS CONTRACTED FOR,

AND EXECUTED WITH DESPATCH IN TOWN OR COUNTRY.

A STOCK OF **500 CHIMNEY PIECES** always to choose from.

PRICE LIST ON APPLICATION.

MARBLE AND STONE CUT TO ANY SIZE.

Masons will always find a large quantity of STATUARY SHELVES and other SLABS in Stock.

¾-inch SICILIAN SLABS at 11d. per FOOT.

MARBLE BOX CHIMNEY PIECE for £1 5s.

First-class Bed-room ditto, £1 10s.

FIRST-CLASS

TRUSS MARBLE CHIMNEY PIECES from £2 5s. to £3 5s.

A WELL-CARVED

STATUARY CHIMNEY PIECE,

with 13¼-inch Piers,

suitable for a Drawing-room, which must be seen to be believed,

FOR THE SUM OF £6.

Net Prompt Cash.

PRICE LIST ON APPLICATION.

STATUARY AND OTHER MARBLE CHIMNEYPIECES.

ARCHITECTS, BUILDERS, and MASONS will find at

W. WILLETT'S SHOW-ROOMS, MARYLEBONE ROAD, N.W.

OPPOSITE THE YORKSHIRE STINGO,

A LARGE ASSORTMENT of STATUARY & COLOURED MARBLES, also ENAMELLED SLATE, and STONE CHIMNEYPIECES, at Prices to command their Orders.

CARVED TRUSS STATUARY MARBLE CHIMNEYPIECE, FROM £6. AND UPWARDS.

ESTIMATES WILL MEET WITH PROMPT ATTENTION.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4*l.* per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

JAMES W. TYLER, CONTRACTOR FOR

DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,

ON IMPROVED PRINCIPLES.

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England

Having for several years been actively employed on laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done as his best recommendation.

Good Zinc badly laid will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will find that this important point is thoroughly attended to, and at no extra cost.

The Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr. TYLER'S directions.

THE LAND SECURITIES COMPANY
(Limited).
Capital, 2,000,000*l.*

DIRECTORS.

The Right Hon. the Lord Naas, M.P. President.

The Directors of the International Financial Society (Limited), acting as a Finance Committee.

John Ennis, esq. M.P.	Henry Farquhar, esq.
Sir James Fergusson, Bart. M.P.	Sir John Gray.

Sir Lawrence Palk, Bart. M.P.	Hon. William Napier.
Sir Henry Stracey, Bart. M.P.	Hon. Henry Petre
William Dargie, esq.	Sir Charles Rich, Bart.
	Granville Richard Ryder, esq.
	Philip Twells, esq.

OFFICES.—Chief Office, West End, 32, Charing cross, S.W.; Branch Office, Office of International Financial Society, No. 60, Threadneedle-street, E.C.

The Company will make advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security:—

1st. Of landed estates, first class house-property, and real property of all descriptions and tenures, and of all estates and interest therein.

2nd. Of rates, dues, assessments, and impositions of all descriptions, raised or imposed by or under the authority of any Act of Parliament, public or private, Royal Charter, Commissions of Sewers, Drainage, or other sufficient legal authority on the owners or occupiers of land.

3rd. Of charges and securities of all descriptions upon or affecting landed estate, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32, Charing-cross, London, S. W.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required. 4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to

CROGGON & CO. 2, DOWGATE HILL, LONDON; 2, GOREE PIAZZA, LIVERPOOL; And 59, GEORGE SQUARE, GLASGOW.

POLONCEAU and SEYSSEL ASPHALTE.

ESTABLISHED

1838

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used for paving Stables (as shown above), the absence of joints preventing the generation of ammonia. For Estimates and Prices, &c. &c. apply to JOHN PILKINGTON, 15, Fish street-hill, London, E.C.

Country Builders supplied with Asphalte in Bulk for covering Footings, Barn Floors, &c. with instructions to lay it down.

GILT BORDERINGS for ROOMS, from 1d. per foot. Best and Cheapest House in London for every description of Room Bordering, Picture Frame Mouldings, and Picture Frames of every description, at the very Lowest prices. Re-gilding in all its branches to the trade. ¾-inch Gilt Beads, 7s. per dozen 6 feet lengths; best ditto, 12s.

GEORGE REES, 57, DRURY LANE.

Four doors from Drury-lane Theatre. Established in 1809.

TO BUILDERS, &c.

A LARGE ASSORTED STOCK always on HAND, of

CLOTHS and BAIZES,

In all widths, colours, and qualities, at HILL & SONS, 88 and 89, St. Martin's-lane, Charing Cross.

The Builder.

VOL. XXII.—No. 1127.

Influence of Woman upon Architecture; and the Attributes of the Art.*

THE last instructions to a certain minister departing from a foreign capital to the place of assembly of a congress, were conveyed in the words, "*Soignez les femmes.*" The injunction at least implied an opinion of the importance of the influence of women in one direction. The influence is not limited to the sphere of diplomacy; but this might be a better world, as in common with others we have urged, were the original intention of a "Communion of Labour" recognised in the education of both sexes, and preparation for the duties of life, and then in the utilization of the *matériel* of advancement. One of the ablest of the noble band of female writers on subjects concerning the position and claims of women,—though not the late Mrs. Jameson, from one of whose books we have just quoted the words of the title,—has well argued that the efforts in every division of progress, even including those for the abandonment of war as a mode of settling disputes, would soonest attain their objects were the co-operation of women universally enlisted. Something of what is, after all, pervading truth regarding possible development of female influence, has occasionally dawned upon those who are striving for the progress of the art, architecture. The value of feminine appreciation, and even counsel, has been hinted at; and it has been suggested, that what has to do with the arrangements of a house is essentially of the mission of women, that art especially is of the nature of things that could receive illumination and be expressed by the female mind, and that the art, architecture, might be within the scope of the feminine study, and perhaps professional practice. Our own conclusion, at least on the point of the importance of feminine appreciation of art in architecture, need hardly be stated here. But, we would say, and urge, that there is in the mind of woman, a particular organization that would afford to architecture what is an element of the constitution of art, and one which the architecture of our time and country is just now in peril of entirely lacking. And, since we have taken some share in showing a necessity for rationality in architecture, or especially in the decorative art manufacture from which it was in danger of being exorcised, we are bound to warn against the other danger of forgetting, in the process of satisfying the reason, the emotional and poetic element of art, or what may be called sentiment.

M. César Daly, never more fortunate than when treating the æsthetics of our art, has just issued forty pages of a "*Causerie*" in which he gives a supposed conversation between a lady, a poet, and an architect, and referring to the general subject of the influence of women upon architecture, as on that of the eighteenth century, and to an iron *grille*, in the church of Saint-Germain-l'Auxerrois, in Paris, of which he has lately given an illustration in his "Revue." M. Daly, an Englishman in some of the things of which Englishmen may be proud, is the Frenchman both as *causeur* (that word which the dictionary cannot translate) and as gifted with power of analysis. In our friend's *Causerie*, indeed, we get as much of other matter out of the *grille-de-fer*, as of the influence of women upon the architecture of the eighteenth century, a subject the importance of which he has before shown, and which no one could better treat at the length which it deserves. However, as the "No. 1" on the box-lid turned up by Edie Ochiltree, implied according to that worthy, the existence of a "No. 2," the adjective "*Première*" on the title-page of the *brochure*, promises a second *causerie;* whilst, we doubt not, the promise will result differently from the digging as described in the novel. In the later pages of the *brochure*, the lady has to recall the Architect's attention to a request that she had addressed to him, to explain how the feminine influence, which she had estimated as likely to be somewhat capricious, had been able to modify the character of architecture. The Architect brings up the arrears of his explanation, in saying:—

"The influence of woman upon architecture is but one of the forms of her influence upon man. The will of the man, rough and personal, is softened by the warmth which the woman kindles in his heart. Even as the bronze of this *grille*, melted in the fire of the furnace, has been moulded at the pleasure of the artist, in like manner the will of the man is moulded upon the desires, the caprices even, of the beloved woman.

The first and the principal theatre of the victories of woman was the domestic hearth: from the slave, there, by insensible transitions, she has become the mistress. So, the history of domestic architecture, of the house of habitation, studied in the aspect of the successively increasing influence of woman over man and over art, offers a subject worthy of the theories of a genius at once the most supple and the most profound, worthy of a writer endowed with the qualities of the historian, the philosopher, and the artist. For the honour of the body of architects, I desire sincerely that there may be owing to it one day that history.

The social relations, friendship, hospitality, the noblest sentiments, have conspired with love and the family sentiments, in favour of this domestic emancipation of woman, and by a logical consequence, in favour of her general social influence."

Without further allusion to the manner in which the provision of a distinct part of the house, as in several periods, for the women, has modified the expression of domestic architecture, he goes on to speak of what even more characterizes the female influence in France, than in England.

"Since the *salon* has become the principal apartment, the pivot of the house, the sovereignty of woman is proclaimed. The government of the *salon* belongs in effect, exclusively to the woman; and it is the only modern government that is sheltered from revolutions. It is despotic, however: there is no charter of freedom [*pas de charte*]. Woman smiles, and man obeys.

It is a curious thing to read the dissertations of the learned architects of the last century, on the doctrines of the ancients, and the necessity of respecting the precepts of Vitruvius, and afterwards to look at their works, conceived and executed, the most frequently without their suspecting it, the blind men, under the influence of women, who then governed with so much of a sovereign power, politics, literature, and art, because they governed the politicians, the literary men, the artists, and even the learned who were the most illustrious. . . . ."

Having referred to the particular decorative character of the *grille*, he observes that in the eighteenth century, mundane and feminine grace invaded the temple, where soon it was enthroned, just as at Trianon and Versailles.

Speaking in his own person, M. Daly concludes, saying that the artist of the piece of metal-work, Pierre Dumicz, was an interpreter of the feminine genius of his time, and that it is truly an advantage for us in this age of science, industry, and positivism, to observe, by the study of the works of that artist and those of his illustrious contemporaries, how much advantage, sometimes, the arts, and architecture particularly, find in allowing themselves to imbibe a little of the feminine spirit. This, and the point of the motto from Vauvenargues ("Introduction à la Connaissance de l'Esprit Humain"), that to have taste, it is necessary to have soul, constitute the argument in the *brochure*. M. Daly winds up his epilogue to the *Causerie* thus:—

"The masculine spirit, rough and strong, easily takes science alone for guide; and under that exclusive influence, genius itself is produced often under forms which are too severe. The veritable architect causes life to spring forth everywhere, it is true. At his command there issues a voice from the most refractory stones and marbles, as from the hardest metals. But if the architect neglects to associate with his efforts of creation, not only Reason, that strength of man, but also Grace, that power of woman, the voice which he will cause to be born will be often hoarse or hissing, and repulsive as the north-east wind of winter.

Reader, if the conviction yet delays to enter into your mind, there is left to you one resource. turn yourself round a little, and consult that one who is by your side, your wife, or your daughter. To the lights of your lofty reason, she will add those of her natural instinct, and the inspirations of her heart. *Art*, to be born, demands that Inteligence be fecundified by Sentiment. From the single brain of the man, were he a Jupiter, can be born only the modern Minerva, Science."

At the opening of the conversation, the lady had remarked that she must refuse to recognise that as an art, of which the perception could escape her sex. She had always understood that it was sentiment that governed art: sentiment was the main point with women; and, without having studied an art, or being mistress of its processes, she thought that its successful works ought to awaken her sensibility,—that it was even by that that she recognised the productions as true works of art. The Poet agreed that *art*, of its nature, addressed itself before everything to our sentiment, and was born more directly of that than of the reason. The Architect coincided, and added that the object of a work of architecture should be manifest, and that the forms should be not only harmonious, but in perfect relation with the nature of the sentiment,—that, for example, a sentry-box in stone, and one of the little chapels such as there are over the graves of the cemeteries of Paris, of the same general form, should be at once distinguishable from one another. The theory which he defended, he said, was that of truth in art,—of material and moral truth, both and at once. But he claimed that a mistaken course should not be attributed to architecture solely: he remarked that imitation of works of another time or country had characterized certain periods in literature; and that there are in the lifetime of nations, periods of indecision, when the labourers are divided into forces, one under the banner of Progress, and the other of Tradition. Architecture had its fainting-fits, like everything that doubts; and modern architecture especially lacked faith in itself, which is strength.

To recover solid and durable convictions, architecture had addressed itself to Science; and he said:—

"From that was born the *rationalist* school, which considers architecture as 'ornamented construction,' and which has this strange character, namely, to exist without being well known by the greater part of its proper members. The adepts of this school are spread in effect amongst the groups of Gothic dilettanti, and eclecticists. Under colour of support, whether of one of the historic schools, or of eclecticism in architecture, they deny one another: the Gothic rationalist refuses to recognise the legitimacy of the classic or eclectic rationalist, and reciprocally. They have however a common principle, that of justifying the forms of art of the style which they adopt, in making them derive laws from science; and this common principle which binds them in after another manner fruitful in consequences, without many amongst them suspecting it, as that which separates them.

The rationalist school has already rendered and will again render services; but it bears a fatal mark of origin: born of a reaction against the idealist school, it is exaggerated and incomplete as everything that draws its vitality from a like source; and it will perish thereby.

The idealist school had too easily made abandonment of the rights of modern society to be represented in art: it was too completely enslaved to the historic forms of art, not to render indispensable and inevitable the advent of the rationalist school; the work of which will be to conciliate modern architecture with contemporary science and industry, a conciliation impossible with the system of blind imitation of the temple or the *château* that you just now bantered so roughly, but with so much reason. This necessary work of concord of architecture and science once accomplished, the rationalist school will disappear: not that it is destined to succumb in combating another school, but it will have no more reason to exist; the object of its existence attained by the alliance effected between architecture and modern science, it will be re-absorbed in a more elevated school, of which it will have prepared the advent, as the organs given by nature for the needs of a transitory and inferior existence, disappear when the animal that has been endowed with them passes to a superior mode of existence which renders them useless.

What is this school which is to come? It is easy to tell. The alliance of architecture and of reason concluded, thanks to the rationalist school, will leave still one progress to be realised, that which ALONE can deserve for architecture the name of *art* in its moral acceptation. I would speak of the alliance of architecture and *sentiment*. . . . . ."

* "Première Causerie d'Histoire et d'Esthétique,—Ce que peut raconter une Grille de Fer de l'Influence des Femmes sur l'Architecture au XVIIIe Siècle. Par M. César Daly, architecte du gouvernement, directeur-fondateur de la *Revue Générale de l'Architecture et des Travaux publics*. Dédié à M. Félix Duban, Membre de l'Institut, etc.—'Il faut avoir de l'âme pour avoir du goût.' Vauvenargues.—Paris; aux Bureaux de la Revue de l'Architecture, Rue Monsieur-le-Prince 60. 1864." 8vo. pp. 40.

The Architect concludes this exposition of his views by saying that the sentiment to which he referred was not that of antiquity, or of the Middle Ages, but that of modern times; for, that there is no architecture that does not express the genius of its epoch, the character of society contemporary with it, and even to the influence and social position of women. In a subsequent page, the distinction between the two elements of art is drawn in the words of the Poet, who is made to say that, if reason serves to enlighten, to cause us to see correctly, and to comprehend the things already perceived, it is especially sentiment and instinct that invent and discover.

We pass with simple allusion, matter which there is in the *Causerie*, of much interest, concerning the relations of science and the miraculous. We can merely note that an explanation is attempted of the fact of the curved form given to the lilies in the *grille*, instead of the straight lines of the stems as in nature. But we may point out one conclusion from such arguments as those which M. Daly has so well advanced. It is this: that the art of architecture is not complete,—that the thing might be said to be not architecture at all,—without the presence of sculpture. For, sculpture it is, rather than any mere mouldings, that would give the *sentiment* of the work, and speak its purpose to those, the general public, to whom we, no less than M. Daly, say that the art should be addressed in great degree, or indeed mainly, and by whom its works should be appreciated and continue to be. In fact, the architect should aim at an appreciation of his productions, somewhat akin to that which is given to those of the musician by persons even who are not acquainted with music. For such appreciation, something more than lines and conventional ornaments may be necessary; and we apprehend, it is much nearer to the correct view of what would constitute the best *architecture*, to say that sculpture is essential to the realization of the sentiment of it, than to adopt the view that there is no connexion between *sculpture* properly so called and *architecture*, that the Elgin marbles were not parts of the architecture of the Parthenon, and that architecture and sculpture were always treated as separate arts. M. Daly, at least, we are inclined to believe, would be of our way of thinking, and not of Mr. Fergusson's. At the same time, the amount, and the high art character of the sculpture displayed in the Parthenon, is not indispensable for our argument: a very small amount may explain the purpose of a building, and secure the *sentiment* which has been above contended for as an essential: but to expect that the sentiment will be apparent, or will even exist, in mouldings alone, seems to us to make failure very probable.

Referring to painting and sculpture as handmaids to architecture, we should mention that M. Daly has some useful remarks on principles which should be observed in their introduction. He says that the painter-decorator wishing to bring to recollection (the expression should be noted), architectural forms on the interior walls of an edifice, should not adopt *imitative painting*, but *interpretative painting*. The columns represented by the painter-decorator, should not enter into competition with the true columns of the edifice: the work of the painter ought to contribute to the unity of the architectural effect, and not to risk contradiction of it. He refers to an example of this "interpretative painting," given in the ninth volume of the "Revue de l'Architecture," &c. In the *grille* of Saint-Germain-l'Auxerrois, he says, the same principle is recognised. A medallion bearing a monogram, is carried by a console. Has the artist imitated a real medallion, a true console?

> "Not at all. He has interpreted these forms with his twisted and bent bars of iron. He has neither reproduced nor imitated them: he has recalled them; and it is in that way he has proved his great instinct of art, his high appreciation of the properties and of the limits of his special art, smith's work."

In short, the conditions of the production of the highest art of architecture, are perfect satisfaction to the reason, and the production of an emotion of pleasure, or sentiment, compatible therewith; or it may not be inaccurate to say, that the art will be the result of union between the masculine attributes and the feminine. It is because such a union has been from time to time effected, that fine and beautiful works in architecture, sculpture, and painting, and in music, poetry, and the drama, have been produced. Man, or woman, each was created incomplete; and the perfect mind is that of one complemented by the qualities of the other.

WEIGHING AND WEIGHBRIDGES.

THERE is no need to adduce statistics of the immense values that are daily changing hands under the arbitrament of weights, nor to point to the many operations in which, for instance, the builder has to call the weighing-machine to his aid, to show the great part played in social and technical life by the operation of weighing. Phrenologists assign a particular part of the forehead to the faculty for distinguishing the weights of objects, and there is no doubt that some people have a special power for very closely guessing the weight of anything after balancing it in the hand. This faculty is of great value to an artisan in handling his tools, and its possession will sometimes in a great measure make the difference between a good and a bad workman. It is not to be expected, however, that the result of a weighing of this kind could satisfy both buyer and seller, and accordingly, from time immemorial, apparatus of different forms have been in use for the purpose. A picturesque field is here open to the antiquary, and one of no less extent is yet to be explored by the social reformer. The manifold frauds practised by petty huxters on the most helpless portions of the population by means of false weighing and measuring have long engaged the attention of our legislators, and three Acts of Parliament have been passed during this century for reform in this direction. In truth, the interests involved are very great, as the sums paid by the poorer population for small portions of food doled out by means of weights and scale are immense in the aggregate, and it is conceivable that much misery could be caused by an extended system of fraudulent weighing and measuring, on which petty shopkeepers could batten like a spider in a corner. The last Act, passed in 1847, has undoubtedly done a great deal of good, but we think that much yet remains to be done.

All existing English weights have as a standard the standard brass weight now in the custody of the clerk of the House of Commons and made in 1758. In 1826 it was determined that "a cubic inch of distilled water, weighed in air by brass weights," at 62° Fahrenheit, the barometer being at 30 in., is 252·458 standard grains. Inspectors of weights and measures, appointed by the local authorities, have the right to enter any shop, to seize upon any false or unstamped weight or measure, and to summon the dealer before the magistrates, who adjudge a fine varying in amount from a few shillings to several pounds. In case the summons should fail, the inspector himself must pay the costs. These inspectors generally receive about 150*l.* per annum, and, by an excellent arrangement, are besides partly paid by results, as they get a portion of the fines. This puts these persons on the alert, and great numbers of shopkeepers are annually fined for defective weights, scales, and measures. The shopkeepers, however, are no less on the alert, and a rather long chapter could be written on what might be termed, not inappropriately, cheesemonger engineering. Hourly every day, from week to week, dealing out small bits of perhaps rancid cheese or bacon, in return for unsavoury discs of copper, can scarcely have a very elevating effect on the human mind; and, for our own part, we must confess to a prejudice for this sort of people, and to a professional preference for the artisan. The heroic Madame de la Rochefoucauld states in her Memoirs that, during the sanguinary carnival of the Great French Revolution, the most bloodthirsty lot were the petty shopkeepers. However this may be, the British huxter of our own time thirsts for more practical things, and, at the bottom of his heart, finding a parody to a famous saying, could whisper that weights and scales were not meant to weigh, but to conceal the true weight. The jealousy with which these people watch a suspicious eye examining the working of their scales, and truculent ferocity with which the quietest remark is met, can only be compared with the animus of a mastiff while crunching a bone.

With greasy ingenuity the cheesemonger or pork-butcher affixes a penny-piece, by means of a bit of lard, to the uttermost flat end (or "neck") of the scale-beam in which the pat of butter, the pennyworth of cheese or bacon, is to be weighed out. *Cela va sans dire* that the penny-piece is adjusted to the beam at the side which is turned towards the inside of the counter, and that, even after the inspector and his witness are in the shop, the copper piece may be easily slipped off the beam. With no less ingenuity and knowledge of statics, the butcher sometimes adjusts a short piece of one of his wooden skewers between the end of the beam and the top link of the chain from which depends the scale—thus increasing the static moment of the meat he puts into the buyer's side. Great facilities for fraud are afforded by the kind of small weighing-machines often used by fishmongers and bakers, on account of the greater number of fulcra (six), and the great areas of the disk and the scale-pan in which the comestibles or the weights are respectively placed. There is now an itinerant buyer and seller of gold and silver objects, travelling in the country districts of Buckinghamshire, who uses a small pair of steel scales specially made for country use. His weights are of course stamped, and are correct, but one arm of the beam of the scale is larger than the other. When he buys, he puts the article in the scale hanging from the short arm; when he sells, he puts the article in the scale fitted to the long arm. He manages to travel about, like an affable bagman that he is, with a horse and gig; and we only hope that a sharp horsedealer may some day manage to sell a horse with one leg longer than the other to this distinguished member of the gigocracy. Amongst some other engineering huxters, tobacconists have a particular preference for dynamical means of increasing their gains. Holding up the scales in the left hand, the two or three ounces of tobacco are briskly banged upon the scale, which has the effect of causing the whole to quickly vibrate up and down, and then, after two or three oscillations, producing an apparent balance, the scales are quickly banged on to the counter, and the parcel is wrapped up and sold. It is not an unusual thing to observe publicans' pewter pots with the bottoms struck up, so that what with this, and a careful development of froth on the top, the customer gets very much less than the "imperial pint." But, then, if the beer be adulterated with, say, *nux vomica*, these two negative frauds produce a positive benefit to the consumer, upon the same principle that a homœopathic quack is, perhaps, safer than an allopathic quack. In the same way the bottoms of dry measures are sometimes driven up, brass weights are filed away, and the leaden plugs of cast-iron weights are partly cut out. At the same time, these latter expedients are too clumsy to be at all safe, and are liable to be instantly detected by the inspector. The steelyards used by itinerant fruitsellers greatly facilitate fraud, even when correct weighs are used. As it is, weights—particularly brass weights—are continually liable to get light, and this is especially the case through the salt and grease furthering the effects of friction on the weights of sugar-bakers, grocers, oilmen, and salt merchants. A great number of the shopkeepers in the metropolis pay a kind of insurance premium against any unfortunate results of the visits of the inspectors of weights and measures. They pay a certain sum per quarter to some weight and scale maker in the neighbourhood, who examines at intervals the state of the weights and scales, and engages to pay any fine which may result from their honestly defective state. This plan is no doubt very practical, and for our own part, if we were inspecting weights and measures, we should pay very particular visits to the shops not under this kind of supervision.

It appears to us that several considerations might be adduced in favour of an amendment, or rather of an extension, of the law which provides for the use of only stamped weights. In the first place, it must be remembered that really accurate weighing, even with perfectly accurate weights, is a most delicate and difficult operation. Let any one read what is written on this subject by, for instance, Faraday, in his "Chemical Manipulation."

The weigh-beam of a good pair of scales ought, when not loaded on either side, to take a perfectly horizontal position. If the two scales be equally loaded, the beam ought to keep its horizontal position, but a very small difference should at once produce an effect. A good balance should have "stability," or the power of easily and quickly returning to, and oscillating about, the position of rest; and "sensibility," on the tendency to turn with a very small additional weight. The sensibility of any balance is expressed by a fraction, the denominator of which is the greatest load that it can bear without injury, while the numerator is the smallest weight that will produce a noticeable effect on the beam. A balance

intended for chemical investigations should indicate at least 1-200,000th of the load. In the first place, it is clear that the two arms of the balance should be perfectly equal in length as also in weight. At first sight this seems a simple condition, but it is not so easy of attainment in practice. Measurement alone is not to be trusted, but the length of the two arms should be also tested by weights. The beam should be as light as possible, -as light as is consistent with inflexibilty. The sensibility also evidently increases with the length of the beam. The stability is obtained by placing the centre of gravity of the beam at the point below and close to the central point of suspension; the points forming the axis of motion must be in a straight line, and at right angles to the beam; while a minimum of friction should be attained by lightness of the parts and by the use of knife-edges. The exactness of the lengths of the arms may be tested by changing the weight and thing weighed from one side to the other, but this is of course only a qualitative, not a quantitative test. By taking an accurate standard weight, and counterpoising it on the other scale by means of, for instance, small shot, after removing the standard weight, the thing to be accurately weighed can be exactly adjusted against the counterpoise. The statical conditions are thus exactly the same, and the same weight that once balanced the counterpoise must balance it again. By this means, first pointed out by the celebrated Borda, an inaccurate balance can be made to weigh with perfect accuracy. This plan, however, of course takes up too much time for common purposes, and, indeed, the more delicate the balance, and the more accurate its results are required to be, the longer the time that has to be spent in obtaining its results. A balance has therefore to be struck between perfect accuracy and practicability, in the construction of weighing scales intended for commercial purposes. But the shopkeeper should not be allowed to himself strike this balance. Badly-constructed scales are, in this way, an incitement to fraud, and an excuse for fraud. Of course, fraud can never be absolutely prevented; but, as in the case we have mentioned, of the country buyer and seller of gold and silver trinkets, there would have been greater difficulties to be overcome if the scales themselves had been stamped as well as the weights.

And this is indeed the improvement in the law that we would advocate. Let the weigh-beams of balances, and, in fact, all other weighing machines, be stamped and passed by the authorities. As a natural consequence, certain tests as to accuracy and sensibility should be determined by Government, to be carried out by the local authorities. This would have the consequence that, without causing a slavish adherence to particular forms, the best dimensions of scales for particular purposes would make their way into general usage. As a further consequence, not merely the weights, but also the scales and machines themselves, should be seizable by the inspector without a special warrant from the magistrate.

Those most important instruments, weigh-bridges, should thus be stamped. The larger specimens could certainly not be seized, but a penalty on any inaccuracy would enforce attention and cleanliness in the working parts. Stamping is all the more necessary in this case, as any defective construction would lead to most extensive frauds, which it would be very difficult to detect. We will give a slight instance, among many others, of the great extent to which discrepancies exist between different weigh-bridges. We described a certain portable engine, a short time ago, an engine which is now being used here in building the Foreign Office. As weighed by the weigh-bridge of the makers, this engine only weighs 2½ tons; in coming up to London, it was weighed by the Great Northern Company, who found that it weighed 4 tons, but they only charged for 3 tons. People's weighing-machines, like their judgments, thus appear to be affected by their special interests, for it is the interest of the company to find a high weight, and it is to the interest of the maker that his engines should weigh little. The main reason that the Acts of Parliament have paid no regard to weigh-bridges, is that these apparatūs were scarcely so widely known at the time that the laws were being framed. Substantially, as is often the case, these very ingenious and truly scientific machines were invented more than two centuries and a half ago. At least, the oldest weighing-machine in which the scale or platform, for the reception of the load, reposed on a combination of levers, is one described by the Venetian physician, Sanctorius, in his "Medicina Statica," published in 1614. The invention was forgotten, until revived towards the end of the last century in England, for the purpose of replacing the heavy scalebeams used for weighing hay and similar matters. A Strasburg mechanic, named Merlin, who had been long in England, imported these machines to the Continent, and they were afterwards greatly improved, and the principle adopted to smaller shapes in 1824, by Quintenz, a machine-maker, also of Strasburg, in Alsace. Indeed, the well-known form of small portable weighing-machines is known under the name of Quintenz on the Continent. Mr. D. K. Clark states that "the first engine-weighing table erected in England was placed at Crewe station, by Messrs. Pooley & Son, in 1847." The great impetus to the use of platform weighing-machines was in fact given by the introduction of railway transit in England. But, some years previously to this it had in America, almost entirely superseded the clumsy and inaccurate scale-beam.

To a person unacquainted with the mechanical principle of virtual velocities, the performance of an ordinary weigh-bridge must be a matter of some wonder. He sees a locomotive, perhaps, standing on a platform which scarcely appears to move, and remains almost exactly level with the ground; and yet, nevertheless, the operator can read off the 25 tons or so load to a few pounds. The mechanism is also mostly quite hidden, which increases the deception. The design and manufacture of these large weigh-bridges are, like most of the modern developments of machinery, now a speciality,—at any rate, in this country. It is important that all the knife-edges should be arranged in parallel planes, so that, when in action, their oscillations being in the same direction, there is not so much crossing and locking of the working centres. On account of durability, the knife-edges should have plenty of bearing surface. Apart from the usual requirements of simplicity and accuracy of construction, there are two principles in these machines, which are essential to their working well for a length of time. The first is:—Easy means of adjustment to any accidental influences; and, 2, relief from wear and tear of the working parts when the machine is not at work. We must do Messrs. Pooley, of Liverpool,—who first applied weigh-bridges to engine platforms and to cranes,—the justice to say that, as far as we can make out, they appear to have first adapted, nearly twenty years ago, the adjusting principle to the steelyards of weighing-machines. Reflection will show that the slightest variation in the proportional lengths of any one of the levers will cause an erroneous result at the steelyard. It is impossible to measure the relative lengths with absolute mathematical accuracy, so as to compare in correctness with the mathematical calculation on paper. On the other hand, a change in the weather, or other apparently slight cause, might effect a similar alteration. It has often happened in practice that weigh-bridges, giving correct results with slight loads, were wrong to the extent of many pounds with high loads. This could have happened through the knife-edge not being adjusted to the exact place on the lever, while the error was so slight as to be only noticeable when magnified by a heavy load. These accidental variations are counteracted by forming the steelyard with a chamber in the longer arm, so as to contain a compensating weight. This weight is made to slide to and fro by means of a rack and pinion connexion. In some of the machines a keyhole is formed within the point of the pinion, and the key being inserted by the person in charge, the equilibrium may be thus restored by a few turns. In the morning, at the beginning of the day's work, a standard weight may be placed on the platform of the machine, the proportionate fraction is adjusted on the steelyard, the apparatus brought to balance, and any accidental error may be corrected by the compensating weight. An ingenious improvement for weighing to a fraction, and for quickly reading off the amount, was applied by this firm to the locomotive engine weighing-table they sent to the Exhibition of 1862.

A recent patent (No. 903, A.D. 1862) specifies this very ingenious "compound poise" for showing the weight of a load to the fractional parts of the divisions on the steelyard; as also a subsidiary and distinct arrangement by which the steelyard itself is enabled to adjust the balance of the remainder of the weigh-bridge. The steelyard of the locomotive weighing-machine sent to the Exhibition of 1862 was made according to this patent. Though not complicated, it is, like most things of the kind, difficult to make clear without a drawing. The "compound poise" permits the absence of the loose sliding weights usually placed on a counterpoise scale depending from a knife-edge. The compound poise is made in three parts,—the weight itself, a graduated bar, and a revolving cylindrical weight. This cylindrical weight is adjustable on the graduated bar by means of a V-shaped worm catching into the diagonal notches cut on the upper edge of the graduated bar. "These diagonal notches are cut so as to form divisions or graduations representing hundred-weights, or the large fractional parts of the tons or other large divisions cut on the steelyard." A pointer is attached to one of the brackets supporting the cylindrical weight, which thus records its revolution, and thereby its position with reference to that of the main body of the counterpoise. When a load is to be weighed, the compound poise is moved along the steelyard as far as is required in order to indicate the principal portions of the load; the cylinder and its bracket are then slidden along the carriage to indicate the larger fraction; and then, by turning the small cylinder till the load is completely balanced, the total weight is at once seen. The whole machine itself is adjusted with nicety by means of a slot at the extreme end of the steelyard, into which is fitted an adjustable slide attached to a counterpoise weight, and set by means of a fine screw to any changes of condition in the machine.

The next important requirement is to relieve the mechanism from strain or wear except when actually working. This was neglected by the earlier makers, and even by Quintenz, and the oversight greatly hindered the general introduction of these machines. For some years weigh-bridges were so constructed as to be isolated by means of four screws. This plan was very inconvenient, as it took up much time, and with voluminous loads the screws could not be got at in order to put the machine into action. The plan now generally adopted is to suspend the fulcrum of the steelyard by means of a chain, reversed in direction by passing over a pulley at the head of the pillar in which are placed the fulcra of the steelyard. The levers are brought into action by raising the whole system into a state of suspension by means of the chain; and the machine is relieved by letting the steelyard down and lowering the platform on brackets prepared for it, while the under levers themselves are lowered out of contact with the platform. A most important matter, and one sometimes neglected in building in turn-tables and weighing machines, is the goodness of the foundations. Upon this point Mr. Clark says:—"The main condition of success about a large turn-table is a perfectly unyielding foundation. It is indispensable for proper action; as a want of rigidity about the foundation very greatly increases the labour of working the table. For large areas of 30 ft. to 40 ft. in diameter, it is impracticable to make the floor itself sufficiently rigid, independently of the foundation, without incurring an unwarrantable expenditure; and the proper course, where the soil is not reliable, is to lay a thick bed of concrete over the whole area, 2 ft. deep or thereabout, well cemented, and closed with iron borings rusted into the upper surface."

For many years the City of London authorities have found it to their interest to stamp the weighing-machines used in the coal trade, and we certainly cannot see why this should not be carried out universally. It seems an anomaly to carefully stamp the weights, while the scales and machines, the levers of which, perhaps, multiply the effect of the weights many hundred times, are disregarded, and only casually taken into account. In most continental countries, all balances, steelyards, and weighbridges are stamped, and certain tests of their accuracy are carefully specified. For instance, the Prussian Verordnung, with reference to small machines, determines that "when 5 centner [*circâ* cwt.] are placed on the bridge as far as possible forward, and ¼ cwt. as a counterweight on the scale," they must show a correct counterbalance after a few vibrations. The same must take place if the 5 cwt. be placed as far as possible towards the hinder end of the bridge. The loads must also be increased to 15 cwt., producing the same results. It is specified that the three points of suspension of the steelyard should be (at least, very nearly) in the same straight line

as the fulcrum, and this line must be horizontal when the machine is in equilibrio. The bearing lever must also have its knife-edges in a horizontal plane. The two steel knife-edges at the back of the bridge, and the two edges for carrying the lever, must be in a straight line. Of course, legislative interference may be carried too far; but there are very great numbers of ill-constructed and consequently deceptive balances, steelyards, and weighing machines in use, to the great loss of the poorer classes, who are obliged, from buying in small quantities, to have their purchases weighed many times oftener than more well-to-do people.

WINDSOR AND VERRIO.

AT a time when English artists (Victoria Regina) obtain unpredecented prices for pictures, on canvas, panel, and wall, and for so-called frescoes in Barry's great building (I use my epithet without offence), the readers of the *Builder* will not dislike to see the *paid* and *unpublished* accounts of an artist employed at Windsor Castle when Charles II. was king. The *sprawling* saints of Verrio and Laguerre (made immortal in verse) are now comparatively few. George and Jeffery destroyed them with an unsparing will and determined trowel. Will men of taste pardon a topographer who loves associations in wishing one withdrawing-room at Windsor, of the Verrio finish, had been spared:

"SEIGNIOR VERRIO.—*Aug.* 1678.

For painting work by him done in the ceiling of His Majᵗʸ Gardchamber, he finding all workmanship and colours for the same (excepting the gilding work), for which is allowed (according to contract and agreement thereof made) the sum of	£300
For painting the ceiling of His Majᵗʸ Presence-chamber (as above)	200
For painting His Majᵗʸ Privy Chamber	200
For painting His Majᵗʸ Withdrawing-room	250
For painting the ceiling of His Majᵗʸ Great Bedchamber	120
For painting the King's Little Bedchamber	50
For painting the ceiling of the King's Closet	50
For painting the ceiling of the King's Eating-room	250
For painting the ceiling of the Queen's Bedchamber	100
For painting His Majᵗʸ Withdrawing-room	250
For painting the ceiling of the Queen's Gallery	250
For painting the Queen's Chapel	110
For painting the ceiling of the King's Privy Back Stairs	100
And to the said Seignior Verrio, being His Majᵗʸ free gift to him for his extraordinary service and care in painting the ceilings of the King's and Queen's Lodgings House, and other works about the buildings	200
In all	£2,430"

Other entries relate pleasantly enough to Lord Arlington (of Arlington-street and Bennet-street), and, better still, to Nell Gwyn:—

"Seignior Verrio, for painting and adorning of the ceilings, side walls, end walls, and in the square and round windows in the King's Chapel, with several figures and other ornaments of painting; finding all workmanship and colours belonging to the painting and adorning thereof (gilding work excepted), according to agreement, 1,050*l.* More to him, in part for painting and adorning St. George's Hall, with several figures and other ornaments of painting, 1,000*l.* More to him for painting and adorning a staircase for Madam Gwin, in her house at Windsor, by his Maj.'s direction, 150*l.* And more to him for his pension of 200*l.*, granted by his Maj. for his extraordinary care and pains in painting and adorning of his Maj.'s Castle of Windsor, 2,600*l.*" —(*Works at Windsor*, 1 *Oct.*, 1680, *to* 30*th Sept.*, 1682.)

"Seignior Verrio, for painting and adorning St. George's Hall, in Windsor Castle, with several figures and other ornaments of painting, finding all workmanship and colours (the gilding work excepted), according to an agreement made by him with the late Lord Arlington, for one year ending at Midsummer, 1683, 1,000*l.* More to him for his pension, for two years, at 200*l.* per ann., 400*l.* More to him by his Majᵗʸ's appointment for painting and making several pictures over chimneys and doors in Madam Gwyn's house in Windsor, 170*l.* More to him for extraordinary painting in St. George's Hall, more than his first, 250*l.* More to him for the custome of several tierces of wine, according to the directions of the Lords of his Majᵗʸ's Treasury, 50*l.* More to him by virtue of his Majᵗʸ's warrᵗ dated 25 June, 1684, being thereby constituted first and chief painter to his Majᵗʸ, with the salary of 200*l.* per ann."—(*Works at Windsor*, 1*st Oct.*, 1682, *to* 30*th September*, 1684.)

"Seignior Verrio, for painting and adorning her Majᵗʸ's Round Drawing-room or closet upon the loads, at Windsor (done according to a design approved of by her Majesty), finding all workmanship and colours, gilding excepted,—250*l.*"—(*Works at Windsor*, 1*st Oct.*, 1684, *to* 30*th Sept.*, 1686).

"Seignior Verrio, for painting, adorning, and finishing the remaining parts of the ceilings, side-walls, and end-walls of King Henry VIII.'s Chapel, in Windsor Castle, according to an agreement made with him, for the sum of 1,000*l.*" —(*Works at Windsor*, 1*st Oct.*, 1686, *to* 25*th Sept.*, 1688).

A royal sign manual warrant, hitherto unpublished (Audit Office Enrolments, vol. D, p. 439), will be read with interest:—

"JAMES R.

Whereas we have been graciously pleased, by a warrᵗ undʳ Our Signet and Royall Signe Manuall, bearing date the xxᵗʰ day of March [1684-5], in the first yeare of our Reigne to constitute the Sieur Antonio Verrio to be Our *Chiefe and firste Painter*, To enjoy the said place withe the sallary of Two hundred pounds per ann.: Our will and pleasure is that out of such Our treasure as shall from time to time be remayning in yoʳ hands and custody, you pay or cause to be paid unto yᵉ said Sieur Antonio Verrio the said sallary of *Two Hundred Pounds per ann.* by equall quarterly payments, from Michᵃˢ now last dureing Our pleasure, and the sume of Three Hundred pounds forthwith for the yeare and halfe which comenced at Lady-day, 1685, and ended at Michᵃˢ last. And for so doeing this shal be yoʳ warrant. Given at Our Court at Whitehall, the Sixteenth day of November, in the second yeare of our Raigne, 1686.

By his Maᵗˢ comand,
SUNDERLAND.

To Our trusty and well-beloved
Edward Griffin, Esq.,
Treaᵗʳer of Our Chamber, &c."

This is a renewal (consequent on a new reign) of a like allowance of 200*l.* made to Verrio by King Charles II., on the 30th July, 1680;* renewed by William III., and again renewed by Queen Anne.

Verrio left two sons, John Baptist and Francisco. His will, which I have seen, made when "sick and weak of body," is dated the day before his death. He died Sunday, 17th June, 1707.

When working at Windsor, Verrio was lodged in the house of Charles Bowles, esq., and the rent, 65*l.* a year, was paid by the Crown.†

When in London in 1675 and 1676, he lived in Portugal-street (now part of Piccadilly), over against St. James's Church, next but one eastward to Sir Thomas Clarges, and next but one westward to the famous Sir William Petty.‡

The grant to Verrio of a gold chain "of the value of two hundred pounds or thereabouts," was made by a warrant of the Lord Chamberlain to the Master of the Jewel House, dated 24th January, 1676-7.§

PETER CUNNINGHAM.

THE DUBLIN INTERNATIONAL EXHIBITION FOR 1865.

AN influential committee has been formed in Ireland, animated by a desire to benefit their country, and to aid in the advancement of arts and manufactures, to organize and bring about an international exhibition next year in Dublin. The list includes the Lord Chancellor of Ireland, the Duke of Leinster, the Earl of Meath, the Earl of Charlemont, the Earl of Clancarty, Viscount Powerscourt, Lord Talbot de Malahide, Lord Annally, the Marquis of Kildare, Sir R. Shaw, bart.; Sir E. Grogan, bart., M.P.; Sir Percy Nugent, bart.; Sir J. J. Coghill, bart.; Sir Bernard Burke; Mr. B. L. Guiness, D.L.; Mr. Gilbert Sanders, chairman of the Executive Committee; Mr. F. W. Brady, Q.C.; Mr. M. Brooks; Mr. W. Dargan, D.L.; Sir R. Griffith, bart.; Sir G. Hodson, bart.; Sir R. Kane, F.R.S.; and many others.

Finding the necessity of a central body in London, the Dublin executive have applied to the Council of the Society of Arts for the use of a room, and such other aid as they might be willing to afford. The Council named a committee to inquire into the position of the proposal, and to report to them on the subject. At an adjourned meeting held on Wednesday last, Mr. W. Hawes in the chair, and when Lord Talbot de Malahide, Mr. Dargan, Mr. Gilbert Sanders, Sir Cusack Roney, Mr. Brady, Mr. Gresham, and several other gentlemen attended on the part of the executive, it was resolved that the explanations were perfectly satisfactory, and that the committee would recommend the Council to give active assistance to the undertaking. The fine building now in course of construction in Dublin for exhibitions by a company will be given over for this special purpose, the directors receiving a certain sum for rent out of the proceeds of the International Exhibition, and being recouped the cost of some additional buildings to be erected specially for the Exhibition. The distribution of any surplus profit is to rest with the general committee. The following gentlemen having agreed to act, were appointed as the London Committee of Advice, with power to add to their number:—Messrs. J. Anderson, R. K. Bowley, E. A. Bowring, C.B., Antonio Brady, Sir David Brewster, F.R.S., H. Cole, C.B., Sir C. W. Dilke, bart., Thos. Fairbairn, J. H. Foley, R.A., Geo. Godwin, F.R.S., G. Grove, W. Hawes, R. Hudson, F.R.S., Owen Jones, C. Manby, F.R.S., P. C. Owen, Hon. B. F. Primrose, S. Redgrave, Sir C. P. Roney, Sir F. R. Sandford, R. A. Thompson, E. Waterton, J. Way, G. F. Wilson, F.R.S., T. Winkworth, M. Digby Wyatt, and P. Le Neve Foster, M.A., Hon. Sec.

As it is intended that the Exhibition shall be opened in May, the utmost activity will be required to insure success, and it is to be hoped that manufacturers and others will immediately place themselves in communication with either the Dublin or the London Committee. The Exhibition will include works of fine art.

EDUCATION OF ART-WORKMEN.

WE have received a further communication from Mr. Bruce Allen, on the subject of his proposed Art-Result Society. We do not yet perceive, however, how its proceedings would be greatly distinguished from those of agencies at present in operation. Mr. Allen says of the present Art-schools,—"None will say there has been lack of effort and trial plans, for the system has varied year by year, and, indeed, it would seem, at first sight, not a little surprising and disappointing that more perceptible improvement in some one or other direction, or at least change, did not manifest itself. But there has been none. The Art-schools of the present hour are as void of practical and *material*, and even of artistic result, as were the Schools of Design when they were a year old, now more than a quarter of a century ago. The reason is plain enough, and it is this: that, according to a law of art and of nature, but a very *few* are, in each generation, gifted by nature with the art faculty in sufficient strength to make their work as copyists on flat surfaces and as makers of representations of existing things, of any art-value at all; so that the attempt to manufacture artists, and to urge ordinary men to display this high and rare faculty, has, as in the nature of things it must, ended in total failure. In every age, doubtless, a certain given number of minds are produced, capable, with cultivation, study and practice, of accomplishing that great and rare art of painting pictures, drawing, and engraving; but such minds are very limited in number, and cannot be added to from the common bulk of humanity by any process, possible or conceivable, of art education." The proposed Society, he says, would "always point to, and ask for, the great end of all art power, viz., the impress of it on material and in objects of common and every-day use, and it would then consequently be the object of all Art-schools, whe

† Roll of Works at Windsor, 1 Oct., 1680, to 30 Sept., 1682.
‡ MS. Rate-books of St. Martin's-in-the-Fields.
§ MS. Warrant-book of the Lord Chamberlain, preserved in the Lord Chamberlain's Office. Let me here observe, with equal surprise and regret, that the portrait of Verrio, engraved for Walpole's own edition of his Anecdotes, was not engraved for the Dallaway and Wornum editions.

ther public schools or private schools, to give to their students the art means, and those *only* required by them in their daily work. This would not be picture painting or drawings on paper, but the power to draw on the material of each workman's own art trade, so as to enable him to add to his ordinary and necessary work some one or other artistic addition; in short, to make his work fine art work, as we see in the works of the past, and not merely ordinary labour and manufacture, or handicraft." And again,—"I think that the notion of encouraging men to *invent* all sorts of new things is a mistake, when we know how many *patents* are weekly taken out only to come to nothing. Does not the real secret lie in teaching the workman something he *can apply to his daily labour*, and thus to add to his *means* and capacity of work, *i.e.* his every-day work? This is true of all workmen, but still more certainly of artist-workmen; and the first step in a true and useful direction will be to teach our art-workmen to make for themselves and to understand a *working drawing*,—not a pretty picture or sketching." Pointing out, however, the mode in which the Society would work, he says,—

"The proposed Society would invite in one year our artists in the shops and art-factories to contribute in competition designs and working drawings of any art object which might be thought most suitable, and within the capacity of our present race of workmen; and such drawings would then, in the following year, be offered to the workmen in competition, to be worked from by them, and the combined results, the drawing and object, exhibited together as tests of the then state of designing and executive ability of both draughtsmen and workmen. Part of objects only need be demanded, so that but one drawing would be needed; such drawing, however, being a full-sized working drawing, and not a mere sketch. The more complete the subject, of course the better, as it would be more readily appreciated by artists and the public. Simplicity of subject at first, and easiness of execution, should be the guiding rules, till it be shown by the resultant work how much and what is now possible. Each year would doubtless add strength and facility, and it would very soon become evident that the art power of the past is not extinct, but only dormant for want of proper and honest exercise, and that the artistic strength of Donatello, Holbein, Fiamingo, Van Leyden, and others, whom the Society of Arts have now honoured by putting their good works before our modern workmen, are yet to be succeeded by modern and living men, if we but give them the same change, and encourage them to go to their work in the same way."

Some time ago the Council of the Art Union of London sought to obtain designs and working drawings for a large range of art objects by the offer of a number of premiums addressed to the students in the Art-schools, but the result was not very satisfactory. The Architectural Museum have for years offered inducements for designs and execution, and continue, with the Ecclesiological Society, to pursue the same course; and the Society of Arts are now annually placing designs before art-workmen and offering very liberal premiums to those who best translate them into wood, stone, metal, enamel, and so forth. The present Art-schools ought surely to afford workmen the opportunity of soon acquiring sufficient knowledge of drawing to enable them to prepare such working drawings as may be required in their special pursuits. If the system pursued in these schools is from that point of view not good, let this be shown, and changes asked for.

We would by no means, however, seek to oppose those who desire to establish fresh agencies for the advancement of the British workmen and the improvement of objects in daily use and always around us, for which there is most certainly plenty of room; and if Mr. Allen will make a little more clear the desirability of establishing a new Society, and state precisely how he would have it act, he may depend on our active assistance. For the improvement of our art-workmen and the extension of the application of art to manufactures, we have worked for many years, through many channels, and shall not be found wanting in any fresh endeavour with those ends in view. The best course he could take would be to call together a certain number of gentlemen interested in the object, and place his views and wishes clearly before them. If convinced, they might resolve themselves into a committee and proceed to organize a Society.

NOTES OF A PROFESSIONAL TOUR IN THE COLONIES.*

THE objects that most strike the European on landing in Central America, are the immense size of the trees, and the rank and luxuriant character of vegetation generally; everything appears on a large and magnified scale. Nowhere do the trees tower up to a greater altitude than in the forests of this country, and they are covered all the year round with bright green foliage; flowering creepers, with splendid blossoms, entwine themselves among the stems and branches even to the very summit, and hang in graceful festoons from tree to tree. So large are some of the trees, that canoes to hold eighteen or twenty men are frequently cut out of the solid butt.

As there appears to be a deficiency of material for paper-making in England, Honduras could supply largely the raw material for the purpose; the leaves and stems of the plantain and banana are convertible into the finest paper, and the waste leaves of the sugar-cane plant may be applied to a similar profitable use.

I must not omit to mention two other fibre products of Honduras which may be rendered available, some of which have already been exported: the one is the *Agave Sisilana*, used by the natives for making ropes, and for twine, and which is also much used to weave into hammocks; the other is of finer quality, the *Pita Bromeliaceæ*, which grows in great abundance, and is said to be superior to New Zealand flax, and capable of being converted into the finest fabrics.

I was glad when my time arrived for leaving Honduras, notwithstanding its many attractions and allurements, and notwithstanding the many friendships and social connexions I had formed; and that anxiety was hastened by the prevalence at that time, and many months previously, of that dread and deadly scourge to Europeans, the yellow fever.

My friends, one by one, fell victims, and were stricken down, and put just under the turf at Yarborough in twenty-four hours or less, after life had departed; some of them not acclimatised, others fully so, from a long residence: so the fatal epidemic is no respecter of persons; and after the deaths took place, I was so frequently accosted with "Old fellow, it's your turn next," that I was not sorry when the time arrived for departure, and the wings of steam propelled me once again in the direction of my native land.

I left Belize on the 16th, and arrived on the 20th at Kingston, Jamaica; had another inspection of the city, but did not see that any improvement had been made during my long absence, although the place offers plenty of scope for architects, engineers, building, improvement, and sanitary acts, to render it really and truly a desirable place of residence for highly civilized man.

During our stay at Kingston we shipped on board part of the wreck of the *Eagle*, that took us some years ago from Jamaica to Honduras, which had the misfortune to finish its course and come to grief on one of the numerous coral reefs that abound in those seas.

On the 25th weighed anchor, and quitted Kingston, and arrived at St. Thomas's about six p.m. on the 29th. Our arrival was signalled by rockets and guns, and we proceeded through the channel into the harbour, to make fast to the buoy alongside the *Atrato*, the identical vessel that carried me, three years before, across the Atlantic.

Shortly after leaving St. Thomas's we passed St. Croix, a very productive Danish island to the south-west of our course, and a few hours brought us within sight of St. Kitt's (or St. Christopher's); its shape is something like that of Italy—an outstretched leg—the upper and larger part, or the calf, being about five miles broad; the lower, or the foot, about four miles; and the ancle being represented by an isthmus not more than half a mile wide.

The chief town is Basseterre; it is situate low, and is therefore hot and dusty. It has a spacious square and a few good houses. Amongst the places of worship is the new church erected and consecrated in 1859, from the designs of Mr. Slater. The former church was destroyed by an earthquake (probably in 1843); the new church is of the Middle Pointed Gothic; broad but not lofty, about 120 ft. long by 65 ft. wide. Provision, I understand, is made against future vibrations and concussions by the introduction of timber framing to support the roof and other parts. The windows are filled with jalousies, to admit air and exclude the sun. The roof is lightly constructed with a tie beam, and rests upon slender pillars. The whole is well designed, and executed, and is considered a very successful specimen of ecclesiastical architecture for tropical countries in the present day. A memorial school, of Early English architecture, is now being erected to commemorate the public services of the late Archdeacon Pocer; the foundation-stone was laid, some time ago, by Lady Pine; and there has recently been erected a pier at Sandy Point, and water has been brought from the mountains for the supply of that town. Two forts have been constructed for the protection of Basseterre, so that there are now three forts; which, when supplied with the full complement of guns, will completely command the roadstead. There has also been erected a chapel at the cemetery, and the public roads have been much improved in places, by the construction of retaining walls and other works.

The island is divided into nine parishes, and each has a parish church, generally large and well arranged, situate near the sea, which command very fine views of the country, and are themselves pleasing objects in the landscape. There are also several Wesleyan and Moravian chapels, at picturesque points of the island.

After leaving St. Kitt's, a short passage brought us to Nevis, the islands being only separated by a small channel, called the Narrows,—a rocky strait, impeded by shoals. The appearance of Nevis from the sea is perhaps one of the most striking and beautiful in the West Indies.

Charlestown, the chief town, is situate in a wide curving bay, and is a place of some importance. "Queen's House," the president's residence, is a convenient and pleasant edifice, situate a little above the town, on the slope of the mountain. The "Queen's House" is a modern structure, erected on the site where the gaol formerly stood, and was previously a gaol and a barrack. The building is large and commodious. The principal entrance is in the south front, leading into a drawing-room of good proportions, and protected by a gallery on the outside. Adjacent to the drawing-room, and separated by large sliding doors, is the dining-room, an apartment of very ample dimensions, containing the portraits of the Queen, Prince Consort, and the Prince of Wales. Some of the windows are ornamented with stained glass. From the dining-room a short passage leads to the two principal bed-rooms. A broad gallery extends along the whole of the western front of the building, to correspond with the south side, and it terminates in the north by an octagonal tower, which serves as a finish to this part of the structure. The lower story contains two good bed-rooms; the rest is appropriated to a suite of offices, and communication is afforded between the two stories by means of two staircases. The grounds in front are laid out as flower-gardens, and a lofty flag-staff erected for the "Royal standard," indicates it to be a residence of the representative of royalty. The court-house is a handsome building, containing commodious offices for the assembly, courts of law, council-room, &c. There is a square in front.

The town church is small, and the churchyard around it is planted with evergreens, and surrounded with a wall. About half a mile to the south of the town are situate the mineral baths, on a rising ground near the margin of the sea. The establishment is large, and commodiously arranged. The island is divided into five parishes, each of which has a church, generally in excellent condition and pleasantly situate; that of St. John particularly, being placed half-way up the mountain, commands an extensive view. The roads are tolerably good, though liable in the low lands to be injured by floods; and the interior of the island is well cultivated, uniformly richly verdant and productive.

Our course from Nevis lay nearly due east, and we could faintly descry Antigua slightly south-east, in the distance, Montserrat to the south-east, and Barbuda, a large island, principally covered with forest, belonging to the Codrington family, to the north-east, and we entered English Harbour, Antigua, about five p.m. This is, without exception, one of the prettiest harbours I have ever seen; it has a narrow, crooked, and rocky channel for the entrance, and is only of sufficient depth of water to admit a first-class frigate, drawing, say, 22 ft. of water.

The harbour is perfectly land-locked, and has commanding eminences around it,—a perfect

* See pp. 589, 595, *ante*.

amphitheatre of hills. At the rocky "Ridge" which frowns over its mouth is a military station, well and perfectly protected with a battery.

Around the harbour are the naval arsenals, suitable for the repairs or the fitting out of a fleet, which formerly was in great request, and is now the rendezvous for our men-of-war during the hurricane months. On the eminences around are the barracks, officers' quarters, hospital, and magazine for a large garrison; but the island at present is without any military defence, except what the local militia inefficiently afford.

Besides English Harbour, there is another harbour in the same locality called "Falmouth," which has recently been surveyed by the Government, as it was thought it would make an admirable station for the West-Indian packets, instead of St. Thomas's, a Danish island.

The two harbours could be readily connected together by means of a short canal, and a passage made through for the purpose of repairs, supply of coals, &c.; but the negotiations were abruptly broken off, because the Packet Company's officers went over *en posse*, and reported strongly against it, preferring the gaieties and allurements of St. Thomas, to the quiet, retired, and sober steadiness of Antigua.

The entrance to Falmouth Harbour is slightly obstructed with a sand-bank, but that could be readily dredged away; and if a pier was erected to jut out a short distance to deep water, the steamers could lie alongside, and embark and disembark passengers, &c., and the whole fleet of the Royal Mail Steam Ship Company could lie there in safety, even from hurricanes, as the mouth of the harbour is only exposed to the south.

At present the company's officers frequently refuse to go into English Harbour; and passengers go out to the steamers in small boats, some 4 miles or 5 miles outside the harbour, to sea, at great risk and peril, as many serious accidents have occurred there.

The town of English Harbour was formerly in a very flourishing condition when the troops were at the Ridge, and the harbour was more frequented by men-of-war; but at the present time it is in a very depressed state, and many of the houses are in a dilapidated condition. The officers' quarters and buildings belonging to the Home Government being mostly unoccupied, gives the whole place a very forlorn and woe-begone appearance. Falmouth, adjoining English Harbour, was laid out originally for a large town, during the palmy days of slavery, when the island was in a flourishing condition, but the plan has never been carried out. Houses have been erected here and there, few and far between; but many of them are in a bad state, indicating too plainly the poverty of the place. The establishment of the packet station at this island, which is better situate than St. Thomas's from many points of view, the return of troops, the more frequent visits of our fleet, would restore these places to their ancient prosperity; and I see no reason at least why the former should not be carried out, if our trade and commerce in connexion with the West Indies be at all considered, and the prosperity of the colonies, as integral parts of the British dominions and valuable acquisitions to the British Crown, have their due weight in the councils of the Home Government. The distance from English Harbour to St. John's, the capital of the island, is about 12 miles, over a tolerably good road, across a hill-and-dale country. On your right, for some distance, you have the continuation of the precipitous mountain range on which the "Ridge" stands; and opposite Falmouth is the Monk's Hill Battery, which commands an extensive range of sea and land; and it is the signal-station for Goat's Hill, at the mouth of the harbour of St. John's, and the city of St. John's. At Falmouth, in the parish of St. Paul, there is a small timber-built church, of Carpenter's Gothic, neat, and nicely painted up; and the windows are partially filled with blue stained glass, which has a very bad effect.

Antigua, unlike St. Kitt's and other islands, has no central eminence, but is ramparted round by most magnificent cliffs, which slope inwards in gradual declivities. The central part is generally flat, relieved here and there by slight undulations of the surface. The whole island is of a rough oval shape, indented here and there with bays, coves, and creeks, some of them running into the centre of the plantations like canals, some swelling into estuaries, and others forming spacious harbours. The principal harbours, besides those I have mentioned, are St. John's, Parham, and Willoughby Bay. Beyond the margin an infinite variety of islands and islets stud the bosom of the blue sea, like so many advanced posts of defence against the invading waves; these are of all shapes and sizes, and are used principally for the raising of provisions and the maintenance of cattle.

From Falmouth the road winds up the side of the mountain, and crosses at a low point, and descends again to Buckthorn village, just beyond which, on a rising knoll, stands the new chapel of St. Barnabas, an elegant little structure, in the Early English style of architecture. The walls are built of green stones, in block and course, with door and window dressings of white limestone, and the buttresses of red bricks. The roof, which is an open queen-post roof, is covered with red and blue ornamental tiles, laid alternately, with an ornamental ridge-tile; there is also a stoneware cross at one end, and a bell gable at the other. The floor is laid with ornamental tiles; and the large east window is filled with stained glass. It is erected on the site of the old chapel, which was destroyed by the earthquake of 1843.

At the half-way house there is another chapel of ease to St. John's parish (All Saints'); it is of Early English architecture, and built, I believe, from the designs of Mr. Fuller. The building is a low erection, with shingle-covered roof, and bell gable. After passing All Saints', you ascend Dickey-hill, which commands an extensive view of nearly the whole island, Parham harbour and shipping, to the north-east, St. Philip's Church and Rectory to the east, with all the intervening plantations, houses, windmills, &c.; and, passing onward, you ascend Otto's-hill, where you have a magnificent panoramic view before you; the harbour, with its beautiful transparent blue covered with shipping, of all sizes, from the simple pleasure-boat, to the brig, schooner, and barques of large tonnage, with the cathedral of St. John's, a large, elegant erection, of cream-coloured limestone, and Government House, with the royal standard flying on your right; the quaint-looking and many-coloured houses of the city, the wharf-side stores of the merchants, with their private flags fluttering in the breeze; with Rat Island, a rough-shaped, conical eminence, rising, as it were, from the middle of the harbour, St. James's Fort in the distance to the west, on one side the entrance to the harbour, and Goat-hill Battery on the other, and the deep blue sea filling up the background.

And all these beautiful objects, with the bright azure canopy of heaven, almost cloudless above you, and the vivid rays of a tropical sun to lighten up and tint, embellish this unique landscape.

B. C. E.

THE THAMES AND ITS TRIBUTARIES.

SOME years ago, in a few memorials of "Father Thames," while directing attention to its general bad condition in the neighbourhood of London, and advocating the improvement of metropolitan drainage, we alluded to some of the numerous towns which, in addition to the capital, drained into our chief river. At a cost of several millions of money, we shall now have the means of intercepting the sewage of a vast district in which dwell nearly three millions of people. In consequence of this large outlay, the Thames, except on very rare occasions of excessive rainfall, will be no longer made pestilent by means of the metropolitan impurities which have for so many years been allowed to pass into the river. It is certain, however, that when this great work has been finished, we shall still have a flood of unwholesome water from the numerous towns and districts standing upon the streams which run into the Thames. A reference to the maps published by the Board of Ordnance, and the last census report of the Registrar-General, will show the extent and the increase of the population in these places; and in addition to this it should be borne in mind that during the last few years there have been extensive drainage works into the respective streams carried out in many of the country towns, but little has been done in the way of applying the sewage to the improvement of the land; and the consequence is, that rivers of poisonous water find their way into the Thames. There is no reason why this should be the case much longer; for, in almost every case, in towns of a moderate extent of population, the refuse, now wasted, and which is also becoming a dangerous nuisance, might be applied to the land in the several neighbourhoods with both safety and advantage.

From various quarters we hear accounts of the constantly-increasing impurity of the streams, caused in some instances by the house-drains, and in others by the refuse of gas-works and of various kinds of manufactories. This is an evil which is daily increasing in importance, and requires immediate attention. As regards the Medway, so unwholesome has that river become that an application has been made on the subject to the Government, who have sent a commissioner to inquire into and report on the subject. It would be useful to extend this investigation, and to let us know the actual extent of this evil, so far as the Thames is concerned; for, sooner or later, we *must* have the means of preventing the present mismanagement. It seems both unjust and unnatural that, after the metropolis, by means of such a large expenditure, has endeavoured to purify the Thames, we should still have reason for complaint in consequence of other towns neglecting to do a duty which would in most instances not only be a means of improving the general health, but also be attended with other advantages.

It is not to the Thames alone that the above observations apply, but also to the Tyne, the Weir, the Irwell, and many of our chief rivers: the increase of the surrounding populations, the opening of manufactories, &c., have rendered parts of these waters little better than open and offensive sewers.

In many instances the offensive outfall from gas factories, &c., has in the metropolis been prevented from passing either into the sewers or into the river. At Blackfriars, where the smell from the gasworks used to be so offensive, proper measures were taken, and we have not since heard of complaint in this neighbourhood. The same plan might readily be enforced with advantage elsewhere.

MONUMENTAL.

The 75th Regiment.—A monument of polished red Aberdeen granite, 13 ft. high, in the form of an ancient churchyard cross, has just been placed in the new cemetery at Stirling. It records the names of 9 officers, 13 sergeants, 9 corporals, 3 drummers, and 216 private soldiers of the 75th regiment, who fell during the Indan mutiny, 1857-58. All the inscriptions and the badges of the regiment are incised and gilt. The granite work has been carried out by Mr. J. Wright, of Aberdeen, from the designs of Mr. Edward Richardson, sculptor, London. The site chosen is one of the best in the new cemetery. Around the base, flowers are already planted.

Inauguration of Statue of Sir G. C. Lewis, at Hereford.—Lord Palmerston has inaugurated this statue, and, in doing so, passed an eloquent eulogy on the deceased. The statue, which was done by Baron Marochetti, is erected immediately in front of the Shire Hall, in St. Peter's-square, and has on its right-hand the Early English Church, from which the square takes its name. The base consists of a block of unpolished Penrhyn granite, on which rests a moulded polished pedestal, surmounted by the statue. The figure of Sir George is cast in bronze, and is 7 ft. 6 in. in height. He is represented as standing with his arms folded upon his breast. The total height of the memorial is 14 ft. The four sides of the pedestal bear the following inscriptions:—On the front—"Sir George Cornewall Lewis, a wise and honest statesman, a profound scholar, a kind and firm friend." On the left—"M.P. for the County of Hereford, from 1847 to 1852. Chief Steward of the City." On the right—"Chancellor of the Exchequer from 1855 to 1858; Home Secretary from 1859 to 1860; Secretary for War from 1860 to 1863." On the back—"Born 1806. Died 1863." The statue has been erected under the supervision of Mr. Chick, county surveyor.

COMPETITIONS.

Basingstoke Corn Exchange.—We omitted to state in our former notice that the design now being executed was selected in competition. The following gentlemen having been chosen to send designs under motto: Messrs. Wyatt & Salter, of London; Mr. Charles Smith, Mr. W. Brown, and Mr. Dodd, all of Reading; and Mr. Musselwhite, of Basingstoke, Messrs. Wyatt & Salter were selected to carry out the work, and the premium of twenty guineas was awarded to Mr. Charles Smith.

East Retford Town Hall and Markets.—Eighteen designs, set forth on nearly 100 sheets, have been received, and have been exhibited. The choice can be made from two or three only.

HESTON CHURCH, MIDDLESEX.

WE are glad to find that our protest against the threatened destruction of Heston Church * is bearing fruit, and that the committee will, at any rate, be forced to pause and reflect before pulling down this interesting old church. The *Times* has opened its columns to defenders of the church, and Mr. Scott has come into the field. He says,—"I do not pretend to a knowledge of what is intended by the 'Restoration Committee,' but I was told by two wholly independent authorities that it was to be rebuilt all but the tower. If less devastation is intended I rejoice, but I, nevertheless, take this opportunity of entering my solemn protest against anything short of the conservation of all which can be preserved, and I give my deliberate opinion that (subject to necessary additions) such is the case with nearly every part of the structure, though from the decay of the stone dressings much external restoration is needed."

THE LIVERPOOL SURVEYORSHIP.

IN reply to the advertisement which appeared in the *Builder* forty-three candidates entered the field. After consideration, the corporation selected five gentlemen, all strangers to Liverpool; viz., Mr. Holden, of London; Mr. Williams, of London; Mr. E. R. Robson, of Durham; Mr. Williamson, of Manchester; and Mr. Mackison, of Stirling; and requested their attendance on Thursday, the 1st instant. After separate interviews with each, the finance committee unanimously recommended Mr. E. R. Robson, of Durham, for election by the corporation.

As some members of the corporation considered it desirable that the department of the Architect should be amalgamated with that of the Engineer, a proposition was brought forward to that effect on Wednesday last. It was, however, rejected, and Mr. Robson appointed, by a majority of twenty-eight.

THE DUKE OF NORTHUMBERLAND'S CHURCHES.

ABOUT two years ago the Duke of Northumberland decided, with the sanction of the bishop of the diocese, on establishing five new ecclesiastical districts, to meet the spiritual wants of the rapidly-increasing population of the parish of Tynemouth. His Grace received the co-operation of the Ecclesiastical Commissioners, and contributed a handsome sum for the necessary endowments. In three successive days in September, 1862, the Bishop of Durham laid the foundation-stones of three churches, which were necessary for the new districts; two of the districts already having churches attached to them, — Holy Saviour, Tynemouth; and Trinity Church, North Shields. The new churches, with their respective parsonages, were to be at Percy Main, Whitley, and in North Shields; and the whole have now been erected and consecrated.

St. Peter's, North Shields.—The church in North Shields, which is situate in Borough-road, immediately opposite the Sailors' Home, is designated St. Peter's Church. The edifice, which is a plain but substantial stone building, in the Early English style, is from a design by Mr. A. Salvin, of London, his Grace's architect. It stands on the site of some old buildings, which were anything but an ornament to the street; and in making the foundations for it 30 ft. of the bank had to be cut away, and about 5,000 tons of earth removed. The church is broader than it is long. It consists of a nave with two aisles and chancel, the extreme length of the nave and chancel being 68 ft., while the breadth over both the aisles is 73 ft. The height of the roof, which is open woodwork, varnished, is, in the nave, 45 ft.; in the chancel, 38 ft.; the aisles being considerably lower. The nave is separated from the aisles by a series of arches,—four on each side,—springing from polished stone pillars; and above these runs the clere-story, which is pierced by a number of lancet windows. The aisles are also lighted with lancet windows, and the great windows in the west front are formed by a combination of lancets, all the windows being filled with toned glass. The chancel, which is formed at the end of the nave by arches springing from a slender column, is floored with Minton's encaustic tiles. In front of the chancel there is, at the one side, the reading-desk, while the other side is filled with a stone pulpit. The altar is behind the chancel, from which it is separated by a slight rail; and, there being no window at the east end, from its being built up against the neighbouring houses, the chancel is lighted by two long lancet windows at the sides. The monotony of the wall above the altar, where, in most churches, a window is placed, is relieved by seven niches. The principal entrance is in the west front, but there is also a side door, opening into Clive-street. At the south-west corner a tower rises to the height of 44 ft., at which height the spire commences, and it is carried up an additional 17 ft., the whole being surmounted by a gilt finial. The builders were Messrs. Smith & Co., of London, the successors of Messrs. Kelk & Lucas, and contractors for the International Exhibition. The church will accommodate about 800 persons, the seats being open pews, of varnished deal. The church will be lighted for evening service by seventeen brackets, designed by the incumbent, each carrying five lights, which have been supplied by Mr. Twizell; and provision has been made for heating.

St. Paul's, Whitley.—The original parish of Tynemouth, as said, has been subdivided, in consequence of his Grace's endowment, into five distinct parishes. One of these—that of Cullercoats—comprises the villages of Cullercoats, Whitley, and Monkseaton. The church of St. Paul, for Cullercoats, will accommodate 400 persons. The church stands on the west side of the road, at the junction of the three roads leading from North Shields, Tynemouth, and Monkseaton. The building is in the Early English style, and presents externally a simple appearance, devoid of ornamentation. The tower—with surmounting spire—has been cut short for the present, but it is fully determined to proceed with it shortly. The tower rises from the south-east corner of the nave, and is at present only 18 ft. high, but the designed height, including the spire, is 90 ft. The interior of the church, which consists of nave, aisles, and chancel, accords with the outside in the simplicity of its appearance. The nave is 84 ft. long, 45 ft. high, and 21 ft. wide. The side aisles are of the same length as the nave, and 12 ft. wide. The clere-story is supported on the north side by four columns with Gothic arches, and on the south by three—space being left clear at the east end of the south aisle for the entrance to the church. The edifice is lighted by twenty clerestory windows; three dormer and three small lancet windows in each aisle; two long lancet windows at the west end of the nave; and at the east end of the chancel there are three lancet windows. The centre window in the chancel is to be filled with stained glass, provided at the sole expense of the fishermen of Cullercoats, and the execution of which has been entrusted to Mr. Barnett, Newcastle. The principal design of the window represents the Saviour in the act of blessing; and, on a medallion underneath, there is a representation of St. Peter in the storm. The roof of the nave is supported by eleven large principals, with stained open rafters; and the principals are supported by moulded corbels. The nave is separated from the chancel by a large pointed Gothic arch, springing from two small columns with moulded cap, &c. The chancel, which has also a stained open rafter roof, is 36 ft. high, 30 ft. long, and 18½ ft. wide. The altar place is laid with Minton's tiles, and has an oak rail, with iron standards. The pulpit, which is on the left-hand side of the chancel, and the reading-desk, on the opposite side, are of Alnwick stone; and at the west end of the nave there is a small font of the same material. The vestry is at the north-east corner of the edifice. The church is to be heated by means of a patent Gill-stove, made by Messrs. Stewart & Smith, Sheffield. Around the church there is about an acre of ground, walled in, which is to be consecrated as a burial ground. Mr. Salvin was the architect of the building; and Messrs. George Smith & Co., London, were the builders. Mr. William Chapman was clerk of the works, and Mr. Tomes, foreman of the works. The stone required for the building was obtained from Messrs. Robson's quarries at Billy Mill. As with the other churches in the borough endowed by the duke, there is a parsonage, built at the sole expense of his Grace, in connexion with St. Paul's. The parsonage stands close to the church, and is a large building, surrounded by about three-quarters of an acre of ground. The architect for this, as for the other parsonages, was Mr. John Green, of Newcastle; and the contractor for the mason-work of the parsonage at Whitley, Mr. J. Robinson, of Tynemouth; for the joiner's work, Messrs. Scott & Hutchinson, Newcastle; and for the painting, &c., Mr. G. Cooper, Newcastle. A drinking fountain has been presented by Mr. George Smith, of London, the builder of the church. The fountain is being built into the churchyard wall, on the outside: it is small and unassuming. The North Shields Water Company have agreed to supply the water.

Expenditure in Improvements.—It is asserted pretty positively that the Duke of Northumberland's share of expenditure in church-building, now going on in North Shields, will not fall much short of 100,000*l.* Exclusive of this large outlay for churches and parsonage-houses, and the immense expenditure upon Alnwick Castle, the following sums, it is stated, have been expended by the duke on his estate since he came into possession in 1847. The amounts, under their respective heads, are made up to December 31st, 1863:—For roads, bridges, &c., 39,689*l.* 0s. 1d.; buildings, cottages, &c., 308,336*l.* 12s. 9d.; draining, 176,582*l.* 4s.—total, 524,607*l.* 16s. 10d.

* See p. 618, *ante*.

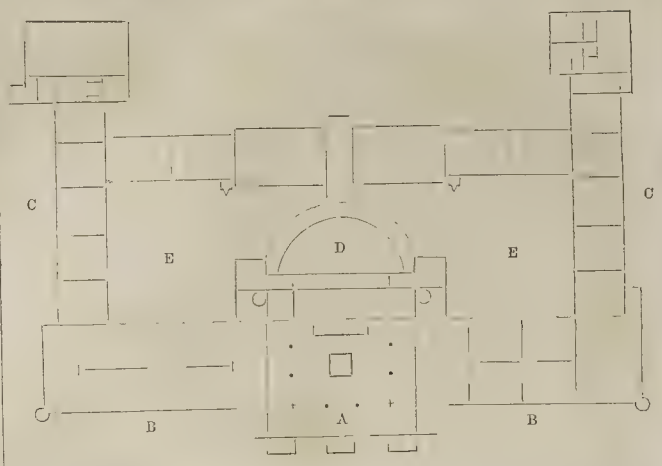
CONTINENTAL NEWS.

Vienna.—The new eagle, which surmounts the spire of St. Stephen's Cathedral, has been "consecrated," and raised, since our last notice from this place. The bird, which represents the Austrian two-necked eagle, is what is heraldically known as an "eagle displayed," measuring 9 ft. across from tip to tip of wings. It was manufactured of wrought-iron by Messrs. Brix & Anders, "artists in iron," from the designs of Mr. Schmidt, the architect to the church, and consists of no less than 2,500 separate pieces, of which 600 alone are feathers; which, again, are secured to the body and to one another with thousands of screws. The sceptre and globe have been carefully worked after the originals in the Imperial Jewel-house, and are gilt, 600 ducats having been melted down for the purpose.——The Imperial Museum of Arms is to receive a statue of Field Marshal Radetzky, now being executed at Munich by Greinwald, the sculptor.——Mr. Heinrich Ferstel is building a very large Protestant church at Brünn: the material used is a peculiar slaty stone found in the neighbourhood.

Berlin.—On the occasion of the inauguration of Rauch's celebrated Monument of Frederick the Great, *unter den Linden*, the late king commissioned Mr. Drake to execute a statue of the great sculptor. The figure, in Carrara marble, is described as treated freely, the dress being modern, yet devoid of that stiffness to which modern drapery is peculiarly liable.—— His Majesty has ordered that a number of guns, taken from the Danes in the late war, be cast into a monument, to be erected in the Park of the "Invalides."——The celebrated "Flensburg Lion" has, by this time, but little remaining of its stupendous body: it will be remembered that it was the sight of this monument of a former victory of the Danes over their invaders that caused the wrath of the Prussian soldiers to boil over, and the demolition of the harmless animal was the consequence. Even the pedestal, of Swedish granite, has been meddled with, and lies a wreck in the churchyard of Flensburg.

Munich.—The sum collected by public subscription for the memorial of the late King Maximilian now amounts to 204,000 florins. At a committee meeting lately held to discuss the manner in which this money should be appropriated, Herr von Lerchenfeld, representing the ancient city of Bamberg, made the following proposal, which was carried; "That 100,000 florins be employed in the erection of a monument in the capital, and that the remaining 104,000 florins be used to endow a new art institute, to be called the Maximilianum."——Professor Widnmann is engaged on a marble statue of the late Grand-duchess Matilda of Hesse-Darmstadt. The figure is recumbent, and the drapery easy and flowing. Widnmann has just finished a very life-like statuette of King Maximilian II.—— John Grobner, the sculptor, is busy with the statue of the terrible Tilly, which the Emperor of Austria has ordered for the arsenal at Vienna. The figure is life-size, and in marble.——The Hôtel de Ville has received a new zinc statue of Duke Henry the Lion, the founder of Munich.

The duke stands in the full armour "of the period," with helmet and shield. The design is that of Knoll, a native artist.——Mr. J. O. Enters, an artist of this city, has been fortunate enough to discover the original set of plans of the minster at Ulm, which was commenced in 1450, but was left unfinished in 1480. The British Museum has bought this curiosity, and people here are furious that it should have been permitted to leave the country.



Hamburg.—The tower of St. Peter's Church, which is the last sad ruin of the great fire of 1842, is about to disappear, and will give place to a new tower and spire, from the designs of Mr. Maack, City Inspector of Buildings. The sum necessary for this purpose is estimated at 250,000 marks banco (about 19,000*l.*), of which one half is already subscribed. ——The contracts for the erection of the new academy are now being received. The mason's contract alone amounts to 15,000*l.*, the facing stone being supplied. The carcass is to be finished by the autumn of 1866.——A bell weighing rather over 2 cwt., is about to be cast at Bieber's bell foundry, for the Dutch Reformed Church, at Pieter Moritzburg (Natal).—— The commissioners of the German Diet have decided upon a new telegraphic line from Hamburg to England, down the right bank of the Elbe. This decision must, however, be again ratified by the town council.——Julius Lippelt, the sculptor, who was the successful competitor for the Schiller memorial to be erected here, has died at the age of thirty-five. The work, which he has left all but finished, will be completed by other hands.

Pesth.——The new Hungarian Academy, which is now in course of erection from the designs of Mr. Stüler, architect to the King of Prussia, is about to be ornamented with a series of statues in terra-cotta. Five of these,—Leibnitz, Newton, Descartes, Galileo, and Raffaelle, are by Berlin artists.——Some six years ago a church of very large dimensions was begun in the Leopold suburb, but owing to want of funds the works had been gradually suffered to stop. Sufficient, however, had been done to admit of the sacristy being employed as a temporary place of worship four years ago. Now a new effort has been made to finish the church, and, as it seems, with success, for hands are once more at work. The building is described as Byzantine in style, and Basilican in form, having four towers at the angles.

Amsterdam.—On the 17th ult. the Palace of Industry ("*Het Paleis voor Volksvlyt*") was inaugurated with much ceremony, and attracted crowds of folks from all parts of the country. The Palace is after the model of Sir Joseph Paxton's Crystal Palace of 1851, and contrasts strangely with the peculiar ugliness of all public and private buildings in Amsterdam. Dr. Sarphati, a gentleman of much enterprise and energy, started the idea as early as 1853; but the slowness and dislike to anything new, so justly attributed to the Dutch mind, threw all kinds of obstacles in his way, and it was not until 1858 that the works were really begun. But even then things went on but slowly, and the Doctor had to see the English repeat their first experiment after a lapse of eleven years before his palace was even roofed in. Prince Frederick, uncle of the king, is the patron of the undertaking, which, however, as far as the Exhibition is concerned, is strictly confined to Dutch industry; and Outshoorn is the architect. Dr. Sarphati received the Order of the Lion of the Netherlands from the hands of the Prince at the opening. In the evening the city was illuminated, and there were fireworks and gratis open air concerts.——The King has appointed Herr E. Gugel, architect, at Munich, to the Professorship of Civil Architecture at the recently organized École Polytechnique at Delft. This school is on the German model, and resembles the Polytechnic Schools of Hanover, Leipzig, Carlsruhe, and Munich, some of which have from 700 to 800 students, who are educated in architecture, civil engineering, mining, chemistry, and machine engineering, and pass thence to the Government examinations for civil appointments.

THE WILLIAM I. MUSEUM, AMSTERDAM.

IN 1863, Amsterdam determined on the erection of a monumental museum of works of art, to be consecrated to the memory of the first king of the Netherlands, and invited the architects of Europe to submit designs for the structure in competition. The programme required that the architectural style adopted should declare the monumental character of the building, and especially its purpose,—namely, to preserve the art-treasures of the Dutch school, particularly those of the sixteenth and seventeenth centuries. A number of designs were submitted to the jury, and from these in the first instance was selected a classical design by Mr. Lange, of Munich; but that being found impracticable, a Gothic design, by M. Cuypers, of Ruremonde, sent in under the motto "*Toute forme qui n'est pas indiquée par la structure doit être repoussée*," was selected. This design we illustrate in our present number.

The building forms a parallelogram 111 mètres one way and 80 mètres the other. A monumental vestibule, A, occupies the centre of the building, and on each side of it extends a parallelogram, B B, 40 mètres long and 15 mètres wide. The wings, C C, are divided into apartments, including one for archæological meetings. The monumental vestibule will contain a statue of King William: behind this is the grand staircase. The area of the vestibule is 600 square mètres: the total height from the pavement to the glazed ceiling, 38½ mètres. The apartment to the left of the vestibule, on the ground floor, is intended for engravings, and has a screen in the centre, in the direction of its length, to increase the accommodation. The various cabinets beyond are appropriated to small pictures, medals, and objects of archæological interest, each room being made to correspond in style with the date of the objects it is to contain.

To satisfy the requirement in the programme of a hall for large meetings, a hemicycle is provided, D, 19½ mètres in diameter. The open court on each side of this, E, is to be appropriated to architectural relics and sculpture.

On the first-floor, right and left of the centre, is a spacious gallery, 16½ mètres in height, for pictures of large dimensions, and in the wings are various other galleries and cabinets, two of which will receive statues and busts of great benefactors, and pictures commemorating events or *souvenirs* connected with them. The large galleries will be lighted by the dormer-windows seen in the view, the architect preferring these, for several reasons, to skylights.

The arrangement of the plan is such as to enable visitors to go through and out of the museum without returning on their footsteps.

By the external arrangement of the façade the architect has sought to express the purpose of the building, and to force on all looking at it the inquiry,—"What are the large pictures they have, then, behind those gigantic walls?"

Statues over the entrance-doors and against the buttresses midway, seen in the view, will represent the great men of the Netherlands, and heroes of the fine arts.

The walls will present variety of colour, produced by stone and bricks of different tints, wood and metal work; and the roofs will be covered with vari-coloured tiles, "so as to form an exterior in harmony with the *chefs-d'œuvre* of painting within." The walls will be mainly of brick.

The other façades will be similar in character, and present other statues. The walls of the vestibule interiorly will afford space for paintings commemorative of events nationally interesting, such as the Coronation of King William I.; the Formation of the Lake of Haarlem, finished in the reign of William III.; the Inundation that occurred in the year 1861; and similar subjects; and the various galleries and cabinets will be appropriately decorated with colour and friezes in relief.

ST. MARY'S CHURCH, HORSHAM.

As our readers already know, the inhabitants of Horsham are about restoring their interesting parish church. They and their friends have subscribed 5,700*l.*, and they want 1,000*l.* more, for which they look to the public. The vicar sends the following brief account of the church:—

This building (156 ft. long) consists of tower, with lofty spire, nave, chancel, and aisles. The tower is of Norman foundation, and belonged to an earlier church, which was replaced, about 1247, by the present spacious edifice, through the munificence (as is supposed) of the nuns of Rusper convent, who were then in possession of the rectorial tithes. The chancel and the nave (although the former is more elaborate in its details) are remarkable, as being of the same width and height, with side aisles extending in uniform and unbroken lines from end to end. The clerestory (one of unusual height, furnished with nine lancet windows on either side) stands on a noble arcade of eight bays, the whole crowned by a spacious arched oak ceiling, intersected with ribs and bosses, the latter elaborately carved with heraldic and other devices. The west tower opens into the nave with a spacious arch, hitherto entirely concealed from view by a hideous gallery. The effect of the restored church, as entered by this approach, will be singularly imposing. The aisle windows (originally lancet, and corresponding with the clerestory) have been in every instance replaced, as have also the east windows, by others of more recent date. Adjacent to the north aisle was erected, in 1307, an unusually beautiful specimen of a chantry chapel, a portion of which was adapted so as to form the principal entrance to the church. This, together with an elegant building of a similar description on the south side, called the 'Brotherhood,' and founded by Henry VI., it is now proposed to restore and render available for seat-room in the church. On the whole a more interesting specimen of the Early English style it would be difficult to find; but, unhappily, in addition to the usual evils brought about by decay, neglect, and ill-advised attempts at repair, the entire nave has considerably receded from the upright,—in the worst part nearly 2 ft.,—and the expedients resorted to for support are unsightly and inconvenient in the extreme. This part of the church, therefore (being, in fact, the larger half), it is proposed now to rebuild, whence alone may be gathered the arduous character of the work in hand. This is, undoubtedly, one of the most spirited local attempts at the effectual restoration of such venerable monuments of the taste, the piety, and the munificence of a former age.

SELECTED DESIGN FOR THE WILLIAM I. MUSEUM, AMSTERDAM.—MR. CUYPERS, ARCHITECT.

AN INVASION OF KENT.

THE men of Kent have been startled by a recent visit, which shows the advantages gained by the progress of science. A short time since "The Fly-by-Night" started on an experimental trip from the distillery of its owner, Mr. Hodges, of Lambeth, at ten o'clock p.m. The ground gone over seems to have been somewhat the same as that by which, at a slow pace, Chaucer's Pilgrims are said to have wandered to the ancient shrine at Canterbury. The first journey, to Dartford, was managed in less than three hours; the second journey, from Dartford to Sittingbourne, in seven hours; but in this time must be included the delay of two hours' duration at Rochester. Up the incline of Chatham Hill, for the most part a gradient of 1 ft. in 10, the engine, which weighed upwards of six tons, was moved at the rate of 6 miles an hour with the greatest ease. From Sittingbourne to Canterbury, a distance of 16 miles, occupied two hours and a half. In this part of the journey was the steep gradient at Boughton Hill, about 1 ft. in 12. From Canterbury to Margate was also well done, notwithstanding that at the last-named place there was a difficulty, owing to the extreme drought, in obtaining a sufficient supply of water. This experiment shows how readily steam power can be applied with good effect to the ordinary country roads. It would be useful, in connexion with this, to have an estimate of the cost of fuel, attendance, &c., so that we might be able to compare the cost with that of horse-labour for a similar journey.

TENT LIFE IN THE METROPOLITAN SUBURBS.

AN ancient woman, whose age was upwards of ninety years, and who was commonly said to be the gipsy queen of the district, has recently died in her tent, which was pitched in the neighbourhood of the Victoria Park. In the course of the evidence which was given before Mr. Humphreys, the coroner, it appeared that the aged dame had walked from Wandsworth on the previous day, and was in her usual health; but she was taken ill in the night, and by the time medical aid could be obtained the poor old woman was dead. A woman, one of the tribe, and who seemed to have more than a usual share of intelligence, said that she considered living in tents healthful, although they were sometimes at night overcrowded by families. In this instance it was not so; and in consequence of the gipsy's illness a fire had been lighted outside, which kept the air at a comfortable temperature. This death, at a very advanced age, was evidently the result of natural causes. In answer to a question, one of the witnesses said that the deceased was no queen of the gipsies, for the same Royal Lady who reigned over English people was in the same way acknowledged by their race. One of the dead woman's companions expressed a firm belief that if she had been removed to the workhouse her death would have taken place long ago; and the coroner remarked that those tent-dwellings must be infinitely superior to the houses of the poor in Bethnal-green and elsewhere. Of this we feel convinced, particularly when the tents are pitched in the favourable situations which long experience has taught the tenants to select. But the poetry and romance which have been attached to the gipsies is fast passing away. The exertions of the regularly-established county constabulary, game-keepers, and others, are driving them into the debatable lands which surround towns, where it would be no easy matter to get a hare or two, a plump partridge, a fat capon, or any such toothful matters for the pot; and they complain of poverty and want of the ordinary kind.

The profession of fortune-telling is not so good as it was formerly, and both men and women are forced to turn their attention to various kinds of settled employment, in the same way as ordinary people. At the Potteries there is a colony of gipsies, which seems to have become permanently fixed. Here the men, boys, and women work at basket-making and other trades. Several of the men are employed in the horse-fair, and some have followed the occupation of horse-dealing with considerable success and profit. In other ways there are indications of the gipsies falling into conditions of civilization.

But, as regards the health of tent-dwellings, the matter would be a subject well worthy of more attention than has yet been bestowed upon it. By means of the Registrar-General, we might get at the rate of infant and other mortality in proportion to the population in some of those situations. The health of the men under tents at Aldershott is reported to have been good; and we have heard few complaints, except as to the earwigs, at Wimbledon; but this was in the summer time.

AN ARCHITECTURAL CONUNDRUM.

ENCOURAGED by the example of the late excellent Archbishop Whately, who did not consider it either at all *infra dig.* or unbecoming his cloth to indulge in puns and conundrums in his hours of relaxation, I put here, in conundrum form, a question that ought not to be without instruction:—What is that which, though it does not show itself in an elevation—not at all in a mere outline one—contributes, though not loudly, so largely to general architectural character? By "not loudly" is to be understood that, notwithstanding its value, so far from any *noise* being made about it, no notice is taken of it by those who ought to call attention to it. Because it does not enter into the category of ornament, it is accounted a mere nothing; and yet, in one respect, it is almost everything; for, besides that it breaks up flatness and what may be called *superficiality*, it stamps a building with the impress of strength and durability, inasmuch as it gives evidence of thickness of wall.

This last observation will, perhaps, at once unriddle the matter by giving the reader to understand that what I am speaking of can be no other than depth of *reveal*, by deeply recessing the plane of the glazing of windows. Though Garbett, in his excellent little treatise, lays so much stress upon *depth*, it is the very quality which is least of all noticed even when its influence is felt. One recommendation of it is, that it confers an air of nobleness that cannot possibly be counterfeited: it admits of no mockery; for, where it exists not, its appearance cannot be simulated. No doubt, dress and cosmetics can do much for a dowdy woman; but, after doing their best, they leave her a dowdy still,—it being not in their power to impart even to beauty's self the fascination of *manner*:—

"La grace plus belle que la beauté."

So is it, also, in architecture; what is constitutionally dowdy cannot by mere surface ornamentation be rendered dignified.

As is the case with many other things, the worth of window-reveal may be best appreciated by its absence; as when the sashes, or whatever the glazing might be, used to be in the same plane as the face of the wall, of which now happily by-gone mode the houses in Bedford-row afford examples.

Besides *depth*, there is another most excellent quality in noble design, which, if it exists not in reality, cannot possibly be counterfeited, namely, *largeness*—a very different thing, by-the-by, from mere bigness, which latter may be produced by merely piling up "heaps of littleness."

Besides *depth*, there is another thing which, although something wholly unconnected with decoration, except that it affords space for it, which imparts to a façade the more enviable than every-day quality of *muscularity*, and is consequently what, where it exists not, cannot be feigned or counterfeited. It is, in fact, just the reverse of the ordinary "skin and bone" style of house construction. Breadth of pier and depth of reveal together insure a certain air of nobleness which, however simple it may be, contrasts so forcibly with the character of our general street architecture, whether it be of the nude or bedizened out, as to be positively striking. I need not be here told, as I was once by an ignorant prig,—who, though calling himself a critic, let it be seen that he was a mere penny-a-liner,—that what I spoke of with recommendation could not possibly be generally adopted. Of course, it could not: neither did I think that any one would be donkey enough to suppose, or else malicious enough to pretend to misunderstand me, and represent me as supposing that what I spoke of could by any possibility be for the many. Excellent well it is that consideration should be given to the requirements and comforts not only of the many, but, as far as practicable, to those of the million also. At the same time, let us allow those who can afford them to indulge without reproach in the luxuries of architecture, with this sole proviso, that they do so under the guidance of cultivated taste and due æsthetic study.

ART-LOVER.

DENMARK.

IN July, 1863, I happened to be at Copenhagen, and had an opportunity of seeing the Museum for Northern Antiquities referred to by your correspondent "A Dane in Australia." It is said to be, and those who have seen it must admit that it is, one of the best museums of its kind in Europe; and what must make it most interesting to the Danes is, that all its contents have been obtained in Denmark, a large portion on the various early battle-fields in that country. The museum is open free; and I happened on one of my visits to have arrived about one hour after its opening, and was surprised to find it well filled, not with staring passers through, but with an intelligent public anxiously enjoying it, and discussing in groups the interest and merits of the various wonderful things around them; interesting from the associations attaching to them, and wonderful, it struck me, from the perfection of artistic merit displayed in the designs of most, especially the Scandinavian trinkets. In the midst of those groups of intelligent individuals above referred to (and you will find all the Danes, even of the lower classes, intelligent) was to be seen a silvery-headed venerable old gentleman with sparkling eyes, his face beaming with pleasurable excitement, his whole soul evidently engaged in the matter as he explained to each, as he saw them interested, the whole history of the various articles under contemplation.

In one of the inner rooms I was examining a very curiously-carved reredos, when the old gentleman came up to me, and, spoke in Danish. I at once asked him a question in English, and when he saw I was interested in the museum, he took me off to the entrance, and then led me through the various rooms, explaining in beautiful English the various historical interest attached to the principal things in the museum, taking most rare things out of the cases for closer inspection, and this he did for others as we passed along. He was so pleased to show me the Dagmar cross, and make me take it into my hand, and tell me that was the cross of which a copy was given by the king (then living) to our Princess of Wales. This most amiable and kind-hearted man was Professor Thomson, who is well known to most antiquaries in Europe, to whose care this most valuable collection is intrusted, and to whose exertions, I am told, it owes its present extensive collection. I would advise any of your readers, if ever they find themselves in this museum, to look out for Professor Thomson: he is always there, and he will show them everything.

But, sir, I cannot say much for the architecture of Copenhagen. I do not think there is a corner of the city and its suburbs that I have not hunted up, and the only building that attracted my attention was the "Rosenborg Slot," or palace, in the "Rosenborg Haue." It is a red brick building, with stone dressings, of the style of James, picturesque in outline, the rest of Copenhagen being of modern date, since the bombardment by Nelson, and several times nearly burnt down by large fires. This Rosenborg Slot contains also a very valuable museum of northern antiquities,—some beautifully-carved furniture, better than I have ever before seen in any other place. There is also the Thorwaldsen Museum, close to the Christiansborg Slot, an Egyptian sort of buildings, with large frescoes on the exterior, representing the mode of bringing the stone from the quarry to Thorwaldsen's studio; also his landing and reception in Copenhagen; but on entering the building, one is astonished to see how it was possible for one man, even in a long lifetime, to execute such a collection of first-class works: there is also room in the building devoted to his private pictures and furniture. There is a small collection of pictures by native artists, in the upper rooms of the palace, of a first-class character; and yet it is strange, that notwithstanding the first-class art displayed in these pictures, with the provision of such a school of sculpture, and with such artistic qualities displayed in the furniture and metal-work in the two antiquarian museums, the arts in Copenhagen at present are in a deplorable state. The architecture is ugly and commonplace in the extreme; and you will see no pictures in the houses of the upper classes equal to those to be seen in the third-class auction-rooms of London. Its sculpture, displayed in pediments, &c., about the city, is monstrous; and the furniture, even in the best of the houses, is of a rude and commonplace description; and yet the people are well educated, and not poor. At the time

of my visit the king's summer residence at Elsinore, which was burnt down some time ago, was being rebuilt in the style of the old building, under the superintendence of Professor Meldahl, the Government architect, and I was pleased to find that the amiable president of the Institute of British Architects was known and respected as far north as Copenhagen; for, at an interview I had with Professor Meldahl, he asked after Professor Donaldson in a very kind and flattering manner.

Shortly before I left Copenhagen I had an opportunity of visiting one of the forts then building, about one mile in front of the Naval Arsenal. It was a row of casemates pierced towards the sea for ten guns, with a platform over the whole, rising out of the sea, about 20 ft. It was constructed entirely of concrete, composed of broken Swedish granite in small pieces, and cement made in the neighbourhood, and was one solid mass, without joint of any kind, and it was easier to break a solid lump of the granite than a piece of equal size of the concrete. The officer who took me over the forts stated that that mode of building the fort was decided upon after various experiments. There are many things of great interest to be seen in Copenhagen, both in its naval and military arsenals, the Palace of Charlottenburg, l'Eglise de Notre Sauveur, &c.; but I have occupied too much of your space already, and I must conclude by saying that I have never met with a more genuine, honest, hospitable, and intelligent people, even among the lower classes, than I have in Denmark. Those who have been accustomed to the fleecing, &c., of Continental towns, will be amazed at the change directly they get into Denmark. If any of your readers should go to Denmark through Hanover, it would be well to stay a half-day there, to see some good brickwork; also, not to forget to look at Mr. G. G. Scott's church at Hamburg. It is one of the best specimens of ecclesiastical work on the route, and one of Mr. Scott's best.

J. P. JONES.

FROM SCOTLAND.

Largo Law.—The tumulus on Norries Law, on the estate of Largo, has been an object of especial interest to archæologists since the discovery of some curious silver relics there more than forty years ago. Mrs. Dundas Durham has caused excavations to be made by her workmen, under the eye of Mr. Howie, of Largo, who has been employed in similar researches at St. Andrews and elsewhere. From the excavations it appeared that a circular foundation of stones had been placed at the outside, with appearances of a lesser one within. A cairn seemed to have been raised on the latter, many of the stones of which bore marks of fire. A small triangular cist, containing incinerated human bones, was found in the foundations of the external wall, and at a spot outside of this an urn appeared, surrounded by bits of calcined wood. The whole structure seemed to have been surrounded by a ditch and earthen rampart. The silver relics were discovered in a sandhill on the west side of Norries Law. They are in every way of great interest and importance, as on some of them the mysterious symbols peculiar to the sculptured stones of Scotland (such as what has erroneously been called the broken sceptre, which has been shown, in the *Builder*, to be a modification of the universal N symbol) are engraved, thus affording a connecting link between two different classes of early Scottish remains. Mrs. Durham, according to the *Scotsman*, has presented them to the National Museum of Antiquities.

Kelso.—It has now been determined to commence forthwith the building operations for the north church, on the site some time ago secured by the congregation, a little below the "Beech Tent." The various contracts for the work were let some time ago. The architect is Mr. Pilkington.

Dundee.—The continuance of good weather is being made the most of at the harbour, and the operations, which have progressed during the summer, are now fast nearing completion. The founding of the whole walls of the dock has been completed, and there are now only two portions, the southern ends of the east and west walls, which are not ready for the coping. The west wall, to the north of the lock of Victoria Dock, is being formed into a round head,—a proceeding rendered necessary by the rebuilding of this wall some 15 or 16 ft. back from the old foundation. At the south end of the east wall the workmen are dovetailing it with the end of the south wall, so that, of the building, only the lock will then remain to be done. The lock will be finished for coping within less than six weeks from this date, and the excavation of the dock will then be proceeded with. The east wall of the lock is now rebuilt up to some 16 ft. above the foundations, with the scouring tunnels formed; and the contractor does not seem to have discovered any of those quicksands which some time ago gave rise to much anxiety.

Arbroath.—The efforts of the committee of management on the Townhead water scheme have been so responded to that, after having secured a plentiful supply of water at Townhead, they were able to hand over the wells to the charge of the town council; and, having a balance over, it was agreed that it should be devoted towards erecting an ornamental drinking fountain. It was resolved that the fountain should be erected at the Tower Nook,—a site which would be of great benefit to the inhabitants. A public meeting to further this object has been held, and a polished granite, or partly granite and cast-iron fountain, varying in price from 120*l.* to 165*l.*, appears to be under consideration. It was resolved to get bills printed and circulated, calling the attention of the inhabitants to the movement; and also that subscription-lists, headed by a short appeal, be got and circulated by a sub-committee, which was accordingly appointed.

PROVINCIAL NEWS.

Winchester.—The collections made by the sub-committee in aid of the restoration of the City Cross, have brought the amount up to and above 500*l.*; and it is expected that 600*l.*, the sum required, will soon be forthcoming. As regards the three vacant niches in the principal group of statues, a suggestion has been made by a local antiquary that the following Winchester worthies should be represented there in stone, viz., Alfred the Great, who was buried in the Newan Minstre, and whose remains during the episcopate of Giffard, A.D. 1110, were removed to St. Grimbald's, in Hyde Abbey, where some years ago they were discovered by some workmen and scattered to the winds; Florence de Luim, first Mayor of Winchester, in the reign of Henry II.; and William of Wykeham, the illustrious Bishop and Chancellor of Edward III.

Cardiff.—The directors of the Cardiff Hotel Company (Limited) have given the contract for the erection of the new hotel to Mr. D. Jones, at the sum of 11,750*l.* The building is to be completed and ready for occupation by the 30th of September, 1865. Mr. Jones has already completed the excavations for the cellars and basement kitchens of the hotel, on a separate contract. The two or three thousand loads of dirt which have been taken out have been employed in helping to fill up to the proper grade the new road from Temperance town to the Castle Lodge, on the Canton-road, which runs past the back entrance of the new hotel. The directors have resolved on some changes in the internal arrangements, which will add to the sleeping accommodation, so that the hotel will have between fifty and sixty bed-rooms.

Erdington (Birmingham).—Some five years ago a wealthy Birmingham manufacturer conceived the idea of making some provision for orphans, and erected an institution capable of accommodating fifty children, and engaged proper teachers and managers to superintend their education and industrial training. So successful has been the operation of the present institution that its founder and supporter—Mr. Josiah Mason, of Lancaster-street, has now in course of erection, a much larger building, capable of accommodating between 300 and 400 children. It is rapidly approaching completion. It is built of red brick, with stone dressings, and the clock-tower at the entrance, and the spire at the south end, give the building a distinctive appearance. It is being executed under the immediate supervision of the founder, from the designs of Mr. Botham. Though a great amount of work remains to be done, it is expected that it will be ready for occupation during the ensuing year. All the fire-places are fitted with descending flues, and the smoke is carried to one tall double-cased shaft erected to the east of the institution. The lavatories, dining-hall, and kitchen are in close proximity. The ground floor of the south wing is open to the play-ground, and is intended to be boarded and appropriated for the children when the weather will not permit of their playing in the open air. It is also intended to erect a gymnasium. The probable estimated expenditure of the new institution—which is intended for the accommodation of boys as well as girls—will be about 3,000*l.* per annum, with which sum we believe it will be endowed by its founder. This endowment will, of course, necessitate the expenditure of a large fortune.

Holbeck.—A new workhouse for the township of Holbeck has been opened. The site of the building is a plot of land situate between Holbeck Moor and the Beeston-road; the main structure fronting the moor being set back from the road about 50 yards. The total length of this portion of the building is 158 ft. A corridor 7 ft. wide occupies the centre of the ground and first floor, and extends through the whole length of the building. The master's office and sitting-room, matron's store-room and cutting-out room, occupy the centre on the ground floor, the day-rooms for females being arranged to the left, and those for males to the right. The classes of aged and infirm persons, able-bodied persons, and children, are kept distinct from each other, having separate day-rooms and dormitories. The respective day-rooms have direct stair-case communication with the dormitories on the first floor, and have also attached to them baths and lavatories for the use of the various classes of inmates. The outbuildings, including the kitchen department and infirmaries, are arranged to the back of the main building. The dining-hall, which is also used as a chapel, has an open timber roof. At the east end is an oriel window, which is to be filled with stained glass by Mr. Barnett, of Newcastle. It will contain the figure of "Charity," and set forth the names of the guardians, who will defray the cost of it out of their private purses. At the main entrance will be a block of detached offices, including board-room, clerk's and superintendent registrar's offices, porter's lodge, waiting-room, receiving-room, vagrant ward, baths, &c., but this portion of the work is not yet finished. The style of architecture adopted is the Elizabethan, the main building being relieved with a tower and slated turret. The total cost of the workhouse will be about 6,000*l.* Mr. Wm. Hill, of Leeds, was the architect. Messrs. B. Woolley & Son were the bricklayers and masons; Messrs. T. Hall & Co. the carpenters and joiners; Messrs. E. Garlick & Son the plasterers; Mr. George Wilson the plumber and glazier; Mr. F. Sutcliffe the painter; and Messrs. Atkinson the slaters.

THORESBY PARK, OLLERTON, NOTTS.

THORESBY PARK, the seat of Earl Manvers, owing to its low situation, and other objectionable features, is to be built on a more elevated position. The House will be of very large dimensions, and ornamented in the Elizabethan style, from the designs of Mr. A. Salvin. The foundations have just been put in for the principal portion of the building, and last week the Earl himself laid the first stone. Mr. Geo. Smith is the builder. The stone to be used in the erection will be Steetley for the dressings and other ornamental parts, filled in with Mansfield Woodhouse ashlar left natural faced. The building may take six or seven years to complete.

The Earl gave the whole of the workmen employed (upwards of 100) a half-holiday and dinner, which was presided over by Mr. Oldreive, clerk of the works; Mr. Batten, the general foreman, in the vice-chair. Mr. G. Wiltshire, sen., is acting as foreman of masons.

BRADFORD NEW EXCHANGE.

A MEETING of the directors of the Bradford New Exchange Company was held on Saturday, the 3rd of September, when the plans of Messrs. Lockwood & Mawson for the proposed new building (recently illustrated in our pages) were formally approved, and the following tenders for the work were accepted:—

	£.
Mason and Joiner's Work.	
Messrs. Beanland	19,687
Plumber and Glazier's Work.	
Messrs. Keighley	1,820
Plasterer's Work.	
Mr. B. Dixon	1,170
Ironfounder's Work.	
Messrs. Cliff	2,073
Slater's Work.	
Messrs. Smithies	437
Painter's Work.	
Messrs. Briggs & Mensforth	269

An additional sum of 1,326*l.* for making the building fire-proof has been included, making a total outlay of 26,782*l.*

WATER SUPPLY.

Grantham.—The Waterworks Company have determined to borrow 1,000*l.*, with the object of enlarging the works at Stroxton, where they obtain the water, for the purpose of increasing the supply to the town.

Stalybridge.—At a special meeting of the Stalybridge town council, it has been determined to apply to the Poor-Law Board for an order, under the authority of the Public Works Act, for a loan of 65,000*l.*, to be made to the corporation, for carrying out the Aston and Stalybridge Waterworks Act of 1864.

Hartlepool.—At the annual meeting of the Gas and Water Company, the plans and specifications for the erection of the new reservoirs at Hart, for the supply of the two towns with soft water, by Messrs. Martin & Fenwick, of Leeds, were laid on the table, and they showed that the two reservoirs would cover an extent of sixteen acres, and would be capable of holding 20,000,000 gallons of water. The contract for the erection of the embankments, &c., will be let on the 17th inst. A dividend of 6½ per cent. was declared, free of income-tax.

Crewe.—The works in connexion with the supply of water to the town and the works belonging to the London and North-Western Railway Company, at Crewe, have been formally opened. The supply has been obtained from a well sunk near the Whitmore Station on the company's line, where a plentiful yield of good water has been met with. The well is 70 ft. deep below the rail level, and 18 feet bore hole, being carried to a further depth of 150 ft. The works consist of pumping-engine and boiler-house at Whitmore, and storeage reservoir at Madeley, the water being conveyed from the well to the reservoir, and on to Crewe, through cast-iron pipes laid along the line, forming altogether a main about 11½ miles long, which is capable of passing upwards of one million gallons of water per diem.

Sheffield.—An extraordinary meeting of the proprietors of the waterworks has been held, for "the determination of the remuneration of the directors of the said company." The actual purpose was to agree upon the allowance of 1,000*l.* a year to Mr. Waterfall, the newly-appointed chairman, who would in return be expected to discharge all the duties of managing director. Mr. A. Smith, the law clerk, explained that the meeting was only intended to get over a legal difficulty, one of the clauses of their Act providing that no director should hold any "office of profit" under the company. The chairman stated that the claims against the company would be 4,000 or 5,000 in number, and the amount of damage probably from 300,000*l.* to 350,000*l.* He also stated that it was intended that the affairs of the company should in future be managed much more energetically than hitherto, and that they should be put in a more practical and business-like shape. The proposition was adopted.

Brighton.—The local guardians now find that the costly well sunk for the supply of the Industrial Schools, so far from affording a supply to their projected new workhouse on the Race-hill, as expected, will not suffice for the future requirements of the Industrial School itself, nor will it enable them to fulfil their agreement with others to supply water from this well. It is even thought the well must be shut up, as the water can be more cheaply supplied by the local company than by their well engine. In testing the well and its capabilities lately, the steam-pump was set to work to draw off the water; and in one hour and thirty-three minutes, the engine drew air instead of water. All the water to the extent of the supply-pipe had been exhausted. At the depth of about 400 ft., a horizontal chamber was excavated, as our readers may recollect, and the second well was then sunk. The supply-pipe runs diagonally from near the bottom of the first well into the second well to a depth of something like 10 ft. All the water to this depth was drawn out; and the quantity, as measured in the reservoir, was 1,700 gallons. In plumbing the first well the depth to the water was found to be 416 ft.; to the bottom of the shaft 18 in. more, making 417 ft. 6 in. From the top of the second well the depth was 691 ft. According to the diagram in the office, the depth of the first well was 437 ft. 9 in.; of the second 864 ft.; so that, either from the actual upheaving of the bottoms of the shafts, or from the falling of *débris* from the sides of the wells, there had been a diminution of depth to the extent of 173 ft.; or there was a reported depth never reached by the well-sinkers. The water, when first drawn from the well, was full of earthy matter, to such an enormous extent, that the subsidence of water in a glass was one-fourth of the whole contents, or one-fourth of earthy matter to three of water. Mr. Bonner, plumber, reported that, from watching the progress of the pumping, he found that the supply was derived principally from land springs in the upper well, and that only a small part came from the lower well. His opinion was that the supply from the well was not sufficient unless lowered 200 ft., which would entail a heavy outlay, and that even then it would be questionable whether the result would compensate for the cost, amounting perhaps to 1,000*l.* A descent was made three hours and a-half after the pumping had exhausted all the water at the depth of the end of the supply-pipe. In that period the water had risen to the extent of 3 ft. only, equivalent to 250 gallons. Strong opinions were expressed that the water in the well comes from the chalk, and not from the Wealden formation on which the chalk rests, and which is pierced at the lower part of the second well. Mr. Wright, being asked his opinion, said the geological dip of the strata in this neighbourhood was towards the south, and water was obtained towards the sea level; but in digging the well in question the important fact was overlooked that the Bevendean Valley intercepted the flow of water and carried it down to the Water-works in the Lewes-road. The water they had been getting was from the chalk, a little below the sea level. A mistake was made in comparing this well with the artesian at Paris, as there was a difference of 500 ft. in favour of the well at the Bois de Boulogne.

The Chairman asked what he would suggest should be done?

Mr. Wright said nothing could be done. The utmost you can get is 1,700 ft. only; and the expense of pumping it is twenty times more than the Water Company would supply it for. He would close up the well.

Mr. Woollett regretted that the advice of Mr. Wright, who was practically acquainted with the geology of the district, was not acted upon originally, in which case a very large sum would have been saved to the parish.

CHURCH BUILDING NEWS.

Ringmer (*Sussex*).—The parish church, having been for a long time in a very dilapidated condition, has been repaired and renovated, under Mr. Joseph Miller, the contractor. The interior walls are now stuccoed, and the woodwork stained, thus bringing to light many features of its old architecture, which have hitherto been buried in whitewash.

Steyning (*Sussex*).—The work of restoring the church here has been carried out and the edifice re-opened. Last year cracks were observed in some of the arches; and, as it was found they were gradually enlarging, it was thought advisable to call in an architect to examine into their cause and tendency. Mr. G. M. Mills was the gentleman selected, and from his report it appeared that many important parts of the building, among them the lofty Norman chancel arch, were in a precarious condition, and required immediate repairs. The parishioners at once determined to carry out these repairs, and, at the same time, to re-pew the church, and make the free sittings for the poor in the centre of the church. The vestry voted 800*l.* for the purpose; but the cost, which was estimated at 1,700*l.*, has reached nearly 2,000*l.* Subscriptions were contributed by the landlords and parishioners to make up this amount. The new pews are of stained wood. A stained glass window in the chancel, over the communion-table, has been put up by the family of Ingram, to the memory of the late Mr. Hugh Ingram, of Steyning. It is in the Early English style, having three lights or sections. The centre-piece represents "The Crucifixion," the north side "The Nativity," and the south side "The Resurrection." The glass is by Messrs. Hardman, of Birmingham. Mrs. Ingram is also a very large contributor to the restoration funds.

Brighton.—The new church in Washington-street is built in the most densely populated part of Brighton, the north-east. It is at the back of Hanover-crescent. Its exterior is perfectly unpretending. Within, the unplastered walls are simply whitewashed, and all the timbers—the pillars, beams, rafters, and laths,—are unpainted, and the tiling is visible between the interstices of the latter. The seats are unpolished Windsor chairs, each of which is provided with a hassock. At the western end of the church is an elevated dais, surrounded by a crimson drapery with yellow flowers, on which stands the communion-table, draped. Beneath the church (and accessible from Coleman-street) are extensive school-rooms, shortly to be opened.

Worcester.—Christ Church, Worcester, has been consecrated by the Bishop of Winchester. It is a simple building, in the style of the period of the transition from Early English to Decorated, and consists of a chancel and nave, with a south aisle and porch. The walls are built of Bargate stone, with Bath stone dressings. The chancel is paved with Maw's tiles, and the east window glazed with stained glass, representing the Nativity, the Crucifixion, and the Resurrection. The church, which affords accommodation for 300 persons, has cost about 1,500*l.* The works have been carried out by Mr. Mitchell, of Shalford, under the direction of the architect, Mr. Howell, of Lancaster-place. The stained glass was supplied by Messrs. Lavers & Barraud, and the stone carving was entrusted to Mr. Earp.

Clifton.—The Society of Merchant Venturers have granted the donation of 500*l.* towards the erection of All Saints' Church, on the Pembroke road, in which all the seats are to be free. The purchase of the land (part of the field lying on the Pembroke and Alma roads, between Chandos-place and Pembroke House) has been completed, and the site for the church conveyed to the ecclesiastical commissioners. The excavations have already been commenced, and the works will be at once proceeded with under the superintendence of Mr. G. E. Street, of London, architect.

Cheltenham.—A contract has been made with Messrs. Wingate, of Gloucester, for the erection of the tower and spire of St. Mark's Church for the sum of 800*l.*

Banwell (*Somerset*).—The church, which has been for the past twelve months undergoing renovation, has been re-opened. Notwithstanding repairs have been going on since last July, the edifice has only been closed a fortnight. The Rev. W. H. Turner, the vicar, has been acting as architect, aided by Mr. R. H. Trickey, painter, &c., of Banwell. The roofing has been restored and gilded, at a cost of over 300*l.*: the previous high pews have been taken down, and replaced by modern ones: a screen, gilded, has been erected between the nave and the chancel. The expense of this, amounting to upwards of 100*l.*, has been defrayed by Mr. H. N. Pigeon. The chancel has been decorated, the flooring laid with encaustic tiles, and filled with seats; and there are other slight improvements, such as cleansing the walls, renovating the pulpit, and illuminating the caps of the columns, at a cost of about 200*l.* The cost of these repairs, amounting in the aggregate to rather more than 500*l.*, has been defrayed by voluntary subscriptions, excepting about 14*l.* for altering seats and cleansing walls.

Alnwick.—The fund for the restoration of St. Michael's Church, Alnwick, has just been closed. The whole of the estimates amount to 943*l.* 15*s.* 4*d.* To meet this there have been subscribed by voluntary rate, public subscriptions, and by sale of old building materials, 945*l.* 9*s.* 5*d.* The fund was originally started for the purpose of restoring the south front, together with three of the windows, and also to have the nave and aisles re-seated with open benches. After this was done, the minister and churchwardens found they had the means to accomplish more; they therefore caused the parish portion to be heated with hot water. They also spent 50*l.* in inserting a new window at the west end of the church, of the Perpendicular period. The vestry was found to be in a very dilapidated state: to put it into thorough repair, it was found advisable to take the entire roof off: this was done, and the plaster was taken off the walls, and the whole put into repair. They also spent about 140*l.* in making the roof of the nave more secure. The churchyard has been levelled, as very few interments now take place in it, the falling tombstones having been put upright, and a uniform verdure now covers the sod.

Brecon.—St. Michael's Church, situate in the parish of Llanvihangel, and distant about six miles from Brecon, has been recently opened after a process of restoration. The work of restoration is in the Gothic style, the designs being prepared by Mr. T. Nicholson, diocesan architect, Hereford. The builders were Messrs. Williams & Sons, Brecon.

SCHOOL-BUILDING NEWS.

Brighton.—Tenders for the erection of St. Peter's district schools, in Richmond-buildings, in accordance with plans and specifications prepared by Messrs. Scott & Suter, architects, have been received and opened. With the first five contractors it will be seen the tendering was close, there being a variation of only 30*l.* The tenders were—Messrs. Sims (London), 1,543*l.*; Patching, 1,512*l.*; Dallimore, 1,510*l.*; Lynn, 1,520*l.*; Cheesman & Co., 1,513*l.*; Fabian, 1,387*l.*; Chappel (Steyning), 1,318*l.* The last tender was accepted.

Leicester.—The chief stone of the new Green Coat (or Alderman Newton's) school, has been laid on a site near St. Martin's Church. Mr. D. J. Vaughan is the architect. The building is Gothic, of red bricks with stone dressings, windows with tracery heads, and panelled underneath. On the front is an oriel window, to be used as a class-room, and a hat and cloak room, and porch, with stone crubattled parapets. The school-room is 60 ft. by 25 ft., with a high-pitched open roof, and a crocketed bell turret, and there is a class-room at the back, 24 ft. by 14 ft. Mr. T. Porter is the contractor, Mr. Firn the stonemason, and Messrs. Goddard & Son, the architects. The cost will be about 1,500*l.*

Hallaton (*Leicestershire*).—A new school and school-house are in course of erection. It is of red brick, with Bath stone dressings, and blue bricks introduced in patterns. In the gable ends of the school are three-light Pointed Gothic windows, with plate tracery. Messrs. Goddard & Son, of Leicester, have been employed to superintend the works. Mr. Loveday, of Kibworth, is the builder.

Codsall.—New school-rooms and a master's residence have long been wanting in this parish. A suitable piece of ground near the church having at length been obtained, the buildings were commenced in the spring, and have just been completed, at a cost (including the site) of 800*l.* or 900*l.* The work has been done by Mr. Bowater, of Wolverhampton, contractor, under the superintendence of Mr. E. Banks, architect.

Bowdon Close.—A British school has been opened at Bowdon Close, a colliery village, distant about 2½ miles from Willington, Durham. The foundation stone of the school was laid on the 29th of January, by Mr. J. W. Pease. The school has been erected from the plans prepared by Mr. John Graham, architect, Hedley Hope. The contractors were Messrs. Hare & Walton, Crook. The building is of firebrick. The dimensions are 50 ft. by 20 ft., and the building will accommodate about 150 children. The structure has been built at the sole expense of Mr. Joseph Pease and partners, to meet the educational wants of the children of the men employed at their extensive collieries.

SANITARY MATTERS IN DUNDEE.

At a recent meeting of the local police commissioners it was stated that a sub-committee recommended that a number of halting-places and other conveniences should be erected in various parts of the town; and also that elegant drinking-fountains should be erected at the Greenmarket and the West Port. In connexion with this subject a letter, addressed to the Convener of the Sanitary Board, by Dr. Allan, was read, in which the writer called attention to the increase of fever at present in the town, and to the necessity of sanitary means being at once employed to check the progress of disease. While visiting the dispensary patients of the Dundee Royal Infirmary, he remarked, "I frequently find that many of their houses are overcrowded and ill-ventilated: numerous accumulations of filth are also lying exposed around these crowded dwellings, which contaminate the atmosphere, and may lead to serious consequences unless speedily removed. In various parts of the Chapelshade, Hilltown, and Foundry-lane, where fever now prevails, such evils chiefly exist, and which can be pointed out. I would most respectfully suggest that the examination and cleansing of these districts be immediately proceeded with; that, in proper positions, large iron boxes be placed, where refuse could be deposited by the occupants, and removed once a day by the bell-cart; and that, wherever overcrowding, or anything injurious to health is seen, medical authority should be obtained to enforce the carrying out of sanitary laws."

DISCOVERY OF A SORCERY HALL (?) AT TORWOOD, IN SCOTLAND.

An interesting discovery has just been made on Tappock-hill, in Torwood Forest, parish of Dunipace. The discoveries, says the *Scotsman*, include a large circular building, *entombed in a mound, a subterranean passage leading therefrom*; the upper portion of a Scottish quern; a small iron hammer of ancient make; with other remains. The building is circular, and the diameter is 32 ft. 6 in., with a depth of 10 ft. What may be termed the main entrance is situate at the south-west side, and the descent to the chamber is accomplished by a stair consisting of ten steps. The staircase is elbow-shaped, and at the bottom it measures 4 ft. 3 in. wide, at the top 2 ft. 10 in. Adjoining it is the entrance to the subterranean passage, which is supposed to communicate with Torwood Castle. The sides of the entrances to the chamber and subterranean passages are surmounted by compound lintels, and the whole building indicates a regular principle of construction. The stones have evidently undergone a rubbing down and dressing, so as to form tolerably regular blocks. A "bing" (or heap) of stones, weighing from 1 lb. to 2 lb. each, and nearly all of one shape, was discovered in a part of the chamber. It is quite apparent that these had been selected for some object, possibly for using with the sling. One of the large stones with which the chamber was filled up is ornamented in two corners by a character or figure resembling a ram's horn [the Volute? such as those among the rock symbols, and at the sorcery hall of New Grange, in Ireland]. The bottom of the chamber is covered, to a depth of 2 in., with what appears to be ashes or charred wood; and at intervals round the walls are cavities measuring 6 in. by 9 in. The chamber in some of its details corresponds very closely with those ancient habitations (called Picts' houses?) which have been found elsewhere in Scotland.

BRIGHTON BUILDERS AND THEIR BUILDING ACT.

The attention of the town council having been called by the Home Secretary to the illegality of one part of the 33rd clause of their bye-laws for regulating the width, &c., of new streets and sewerage thereof, they resolved to invite suggestions for alterations from the builders and architects living in the town. Agreeably with this invitation, a meeting of those interested in building operations was held. Mr. John Davey was called to the chair, and having briefly opened the meeting, Mr. R. Mason rose and said he had an objection to make to one clause which pressed very hard upon builders of small property; and that was the compulsory extra thickness for the walls of houses of 20 ft. high and two stories. 14 in. were now required for party walls and for back and front walls, and he thought a foot for party walls and 9 in. for back and front, of brick, for houses of this description, would be quite sufficient, and he had no doubt that others besides himself had found it difficult to build them more than that. He would therefore move "That it be suggested to the town council to amend their bye-laws in this respect accordingly." This was seconded by Mr. Holloway, and a protracted discussion ensued. Eventually Mr. Mason withdrew his motion in favour of a resolution of Mr. Scrase to the effect that a committee should be appointed to consider the bye-laws, and report to an adjourned meeting what suggestions should be made to the council."

Mr. Woodman, architect, in a letter, defends the Act. He says,—

"To return to rickety, ill-ventilated, badly-drained habitations,—an undue proportion of bricks and mortar to air space; to erect tenements inviting accidents by fire; and, in short, possessing every possible defect both sanitary and constructional,—and that, too, for a class of householders unable to protect themselves,—would be reverting to a condition of things in vogue in the 'good old days,' but not to be tolerated now; and the town council will, no doubt, recognise other claims than those represented by the 'breeches pocket' interest of the speculative builders."

MASTERS AND MEN.

At the Doncaster West Riding Petty Sessions, before Mr. Aldam and other magistrates, Mr. Harold Arnold, builder, was summoned by a workman named Simpson, for two days' wages, 9s., due to him under these circumstances:—Mr. Arnold is the contractor for the building of a Primitive Methodist chapel, at Mexborough, and the complainant was employed there, on his own statement, at the rate of 4s. 6d. per day, but upon Mr. Arnold's evidence at the rate of 27s. per week. The complainant obtained another job, and left Mr. Arnold, after working on Monday and Tuesday, and without giving any notice. Mr. Arnold thereupon refused to pay him his wages, and the question turned upon the custom of the trade. Complainant stated, that it was the custom to leave without giving notice, as the engagement was by the day; whilst the defendant stated that the invariable custom was to give and take a week's notice.

The magistrates, after consideration of the case, decided that the claim made by the complainant must be paid, it not being proved to their satisfaction that the custom of the country required a week's notice.

Mr. Aldam remarked that such cases as these, and the inconvenience they must of necessity create, would be avoided if a written agreement were made when engagements between masters and workmen were entered into.

ENTERTAINMENTS.

Gallery of Illustration.—The *Opera di Camera* having pleased the public, Mr. German Reed has produced a new work by Balfe, entitled "The Sleeping Queen," and a comic adaptation by himself, from Offenbach, called "Too Many Cooks." For exponents these have Miss d'Este Finlayson (her first appearance), Miss Poole, Mr. Whiffin, Mr. R. Wilkinson, and Mr. J. A. Shaw (his first appearance). For the first, Mr. John O'Connor has painted an effective Spanish scene. Both works have proved successful.

St. James's Hall.—Mr. Anderson is doing magic here on a great scale, after an absence of seven years from England, not at present introducing any fresh deceits, but giving to old ones new and, we may fairly add, effective faces. His daughters aid him prettily, and the eldest shows, in her part of the entertainment—pseudo-second sight,—a capital memory, and great facility in spelling backwards. The "Wizard" still denounces the spirit-rappers energetically.

The Polytechnic Institution.—When the Polytechnic re-opens on the 19th, Professor Pepper will produce an entirely new lecture, which it is expected will be a companion one to his fortunate ghost entertainment. The subject he has selected is "Sound and Acoustic Wonders," such as the Talking Heads The Telephonic Concerts—The Invisible Girl, &c.

Miscellanea.

Another Palace in the North of Scotland. The Prince of Wales is about to erect a new palace at Abergeldie. Mr. Smith, of Aberdeen, the architect of Balmoral Castle, is engaged in the design.

Memorial Tablets: Mrs. Siddons.—Messrs. Edwards & Son write,—"It may interest some of your readers to know which was the house in Great Marlborough-street formerly occupied by Mrs. Siddons. It is No. 49, now in our occupation."

Crieff: Gift of a Public Park.—We understand that the Right Hon. Lord Willoughby d'Eresby has resolved to give a park to the inhabitants of Crieff. The ground selected stretches from the upper part of Burrell-street west to the Wool Mills, and extends to about twelve acres.

Workmen's Shakspeare Memorial.—A public meeting is fixed to take place at the Whittington Club, Arundel-street, Strand, on Wednesday evening next, the 14th instant, with a view to place the movement before the working men of the country. To raise a memorial to our great poet will be an honourable thing for workmen to do.

The London General Omnibus Company.—At the usual meeting of the General Omnibus Company, a dividend and bonus equal to 6½ per cent. per annum has been declared for the half-year ending 30th of June, and a sum of 4,990*l.* 1s. 10d. carried forward to the next account.

A Valuable Invention.—Mr. Benvenuti's patent for elliptical or oval compasses, the sale of which was lately announced to Messrs. Rowney & Son, of London, is thus spoken of in the *Swansea Cambrian*. "It describes an elliptical circle of any form or size from egg-shaped oval to the true ellipsis, even the circle, and with the same accuracy as those obtained with geometrical process. This invention will doubtless prove a boon to the artisan. It is ingenious in contrivance and simple in its construction."

The New Magnesium Light.—The great difficulty which has hitherto stood in the way of the utilisation of this very brilliant light has been the want of some means for its easy application. This difficulty is said to be now entirely surmounted. Mr. A. G. Grant, an American gentleman, resident at Nottingham, has patented an apparatus for effecting the object in view. The wire is coiled on spools, and thence is drawn between cylinders to a tube through which it is said to be thrust at precisely the rate at which it burns. The apparatus will form a hand-lamp, or may be applied for other purposes,—such as the lighting of theatres, the making of fog-signals, or signals of any kind. The hand-lamp will be especially useful to photographers. The increasing cheapness of the magnesium wire may soon cause it to be generally adopted where a very brilliant light is required.

LADY PAINTERS IN FRANCE.—It is stated that the Prefect of the Seine has commissioned Mademoiselle Nelly Jacquemart to decorate the Church of Suresne, near Paris. The young lady belongs to a family which has more than one artist besides herself amongst its members.

ST. PETERSBURG A PORT.—Sir Morton Peto has, it is said, contracted with the Russian Government for the construction of a port at St. Petersburg, which will permit vessels to load and unload there, and make the capital independent of Cronstadt, except for fighting purposes.

PRESERVATION OF MEAT.—M. Runge gives the following process for the preservation of meat:—He takes an earthenware vessel, of convenient size, with a well-fitting cover, and at the bottom he pours twenty to thirty grammes of concentrated acetic acid, and places over it, at a distance of about 5 centimetres, a small grating made of wood, on which the meat is laid, and the lid is put on. The result of this arrangement is, that the meat is surrounded by an atmosphere of acetic acid vapour, and is preserved from putrefaction for twelve or fourteen days.

FROM INDIA.—Two spans of the railway bridge over the Nerbudda at Broach, have been carried away by heavy floods; and another bridge, on the same line, near Unklesur, has been destroyed. All traffic between Surat and Broach had in consequence been stopped.——Mr. Latham, a civil engineer at Bombay, has entered into negotiations with the Government of Goa, and the Portuguese Government at Lisbon, for permission to be allowed to construct a line of light railway from Pangim to the interior, for about forty miles to the foot of the Ghauts.

ST. IVES.—The foundation stone of a new pier has been laid at St. Ives. It is intended that the pier shall extend 615 ft. in a south-easterly direction, running into a depth of water of 30 ft. at high-water, and 6 ft. at low-water mark spring tides. The pier will consist of two parts,—a sea-wall next the shore, 191 ft. in length, formed wholly of stone, and a breakwater similar to that now being constructed at Falmouth, consisting of timber frames filled with rubble stone. The end of the pier will be round, and of strong basket-work of timber, also filled with stone, the foundation of which will be 60 ft. in diameter and 10 ft. 6 in. in depth, constructed of brickwork with concrete hearting.

FATAL FALL OF A "STEEPLE JACK" FROM A CHIMNEY.—John Delooze, late of Dalton-street, Chorlton-upon-Medlock, known as "Steeple Jack," was a bricklayer, and was employed in "pointing" a chimney at Adlington, near Chorley. He was seated on a stage to which was attached a rope which passed through blocks at the top of the chimney. A labourer named Bagnall was raising the stage, when the rope broke, and the deceased fell from a height of 20 yards. Bagnall was knocked down, but not seriously hurt. The deceased sufficiently recovered consciousness to request that he might be taken home to Manchester to his wife, but afterwards died. The rope was considered sound and strong, and Mr. W. S. Whisker, of Rochdale-road, a witness at the inquest, said he could only account for its breaking by the friction against the corner of the chimney during the high wind on the previous night. The jury returned a verdict of "accidental death."

WELL WORTH POWDER AND SHOT.—The Skidmore Art Manufactures Company have just completed a handsome goblet, which is intended as a prize to be competed for annually by the Nottingham Robin Hood Rifle Company. It has been made for, and will be presented to, the company by the Duke of St. Alban's, the honorary colonel. In this example of art workmanship, Mr. Skidmore has united various metals, translucent enamels, also the amethyst, carbuncle, and crystals. The body of the tankard is of iron, lined with silver. Externally it is decorated with massive ornaments of silver and gilt bronze, which are saw-pierced, enamelled set with precious stones, and elaborately engraved: filagree is also used to enrich the gilt bronze surroundings and settings of the precious stones. The cover is surmounted with a crystal, and crystals also add to the attractions of the base and the handle, the grip of which is formed of ivory, inlaid and embraced by ferrules of silver, on which the names of the successful competitors in the annual contests will be engraved. The result is very satisfactory.

NEW RAILWAY HOTEL AT LIVERPOOL.—The hotel to be erected at the Lime-street Station, Liverpool, by the London and North-Western Railway, will cost 50,000*l.*

COST OF BELLS.—More than one bell-founder, including Messrs. Warner & Sons, say, with reference to a recent letter in our pages on the cost of peals of bells, that at the present time church bells can be had for much less than 8*l.* 8s. per cwt.

TENDERS FOR THE NEW WORKHOUSE, BRIGHTON. At the last meeting a report was read from the New Workhouse Committee, who stated that they had carefully considered the question of taking out the bills of quantities for the proposed new workhouse, and they recommended that Messrs. J. C. & G. Lansdown, of London, surveyors, be employed, conjointly with Mr. G. Maynard, to perform the work, at a charge of 1½ per cent. upon the amount of the accepted tender, for the services of both parties. The report was received and adopted.

SALE OF THE GREAT BED OF WARE.—Last week, the Great Bed of Ware was sold by auction by Mr. E. Jackson, at the Saracen's Head Inn, Ware. Mr. H. Wilmott, of the Railway Tavern, Hertford, made a bid of 100 guineas, and after a few minutes' pause, during which there was the utmost stillness in the thronged room, the bed was knocked down for that sum. Shakespeare's allusion to this bed in "Twelfth Night" is well known.

THE IRON TRADE.—The trade, both at Wolverhampton and Birmingham markets, evinces a better feeling than it has done of late, according to *Eylands's Circular*. The weakness of the market has evidently passed, and buyers express themselves safe in making their purchases for next quarter. For best hot-air mine pigs, 3*l.* 15s. is named; second quality, 3*l.* 10s. to 3*l.* 5s.; pigs, with slight admixture of cinder, 3*l.* and 2*l.* 17s. 6d.; melting pigs, 3*l.* to 3*l.* 5s. As to manufactured iron,—marked bars, 9*l.* 10s.; hoops, 9*l.* 10s. Sheets,—singles, 10*l.*; doubles, 11*l.* 10s.; lattens, 13*l.* Second-rated makers are quoting 5s to 10s. per ton less. In Scotch pig-iron the advance of 3d. per ton in the beginning of the week is just supported and no more,—prices stand nominally at 58s. 3d. cash sellers, and 59s. 6d. three months.

BATH IMPROVEMENTS.—The Corporation has passed this subject under review, at a meeting convened for the purpose, and has pronounced it to be "essential to the health and welfare of the city" that the river shall be purified and the water-supply increased; that these great works shall be executed "with all possible speed;" and that a new Act of Parliament shall be applied for if the desirable improvements cannot be otherwise effected. It happens that these much-needed improvements can be obtained without adding materially to the burdens of the ratepayers. In about five years, or at the period when the charges for the contemplated works will fall heaviest upon the borough, debts will have been paid off and property acquired, so as to leave at the disposal of the Corporation, according to the local *Chronicle*, from 3,500*l.* to 4,000*l.* yearly, which sum will go far towards meeting the charges for principal and interest of the loans to be borrowed.

CHURCHES STRUCK BY LIGHTNING.—The church of Stoke-by-Nayland was recently struck by lightning in a severe thunderstorm during the morning service. One of the pinnacles on the summit of the tower of the church was struck off, and the parapet also of the tower was injured. A strong sulphurous smell was noticeable in different parts of the church, and more particularly in the organ gallery, behind the organ. A wire attached to the clock bell on the roof of the tower was severed and almost fused by the lightning, but no one was injured, though great alarm was felt among the congregation.——A few days ago, says a Tyrolese paper, a thunderstorm discharged its fury on the village of Worgel, in the valley of the Inn. True sons of holy Church, the villagers at once flocked to the steeple to attract their saint's attention by ringing the bells; and this the more readily as they had the good luck of numbering among them a bell reported miraculous. But the laws of nature do not always agree with the superstitions of the Church. The lightning struck the bell, came down upon the ringers, and killed six of them on the spot. If this sad accident should lead to lessen the amount of ringing there it would not be useless.

SALE OF PROPERTY AT RAINFORD.—The little estate, known as the "Orrett's," of six acres, situate in Rainford, and producing a rental of about 30*l.* per year, has been sold by auction to extraordinary advantage. The first offer was 600*l.*, and the bids progressed up to 1,700*l.*, when the auctioneer announced the reserve bid of 2,200*l.* The biddings were again immediately taken up, and in a brief space of time the property reached the sum of 5,100*l.*, at which price it was knocked down.

THE DRINKING FOUNTAIN MOVEMENT.—A drinking-fountain, which has been erected near the cattle-market, in Middleborough, Colchester, at the cost of Mr. T. J. Miller, M.P., has been opened with befitting ceremony, by the mayor and corporation of the borough. The fountain stands about 10 ft. high, and is built of white brick, with stone base, ornamented with four square polished granite pillars, and capped with Portland stone, upon the top of which there is to be a lamp. The water issues from a white marble shell, and falls into a black marble bowl, where it is caught with drinking-cups. At the foot there is a stone drinking-pan for dogs. The architect was Mr. H. W. Hayward; and the builder, Mr. S. Mansfield, of Colchester. The cost was about 100*l.*

PROPOSED INDUSTRIAL EXHIBITION IN MARYLEBONE.—The All Souls' (St. Marylebone) Club is said to be one of the greatest successes yet achieved in this movement, in connexion with the co-operative principle. Twopence per week, with no entrance-fee, gives the use of two bagatelle-rooms with three boards, of a suite of rooms for reading, chess, draughts, &c., over a pipe, and of a suite for non-smokers. There is also a large room where elocution, singing, and other classes are held and concerts given. A co-operative store has been started, and now shows a profit, it is said, of 19 per cent. on the first month's working. The members also obtain good and cheap coals by co-operation. There are 910 members on the books. The committee, according to the *Marylebone Mercury*, now invite the working men of Marylebone to join in holding a working-class industrial exhibition at Christmas time in the school-room of Great Portland-street, where a public meeting will shortly be held on the subject, with Mr. Peter Graham as chairman.

ST. JOHN'S COLLEGE, CAMBRIDGE.—The new chapel of St. John's College, Cambridge, which is being erected from the designs of Mr. G. G. Scott, is to receive an important alteration, from the liberality of Mr. Henry Hoare, of Fleet-street, formerly a distinguished student of the college. Soon after the work was begun it was suggested to Mr. Scott that a massive stone tower, as a substitute for the *flèche*, or wooden spire, would be a great improvement in the design of the building. Mr. Scott warmly espoused this idea, and prepared a design of a tower upwards of 160 ft. high, and open within the building to the height of the second set of windows. The authorities of the college, however, finding that the proposed change would involve an additional expenditure of between 5,000*l.* and 6,000*l.*, decided that they could not in prudence adopt it, and resolved to proceed with the work according to the original design. Mr. Hoare has recently proposed to the college, in a spirit of princely munificence, to erect the tower at his own expense. The offer has been accepted by the college, and the requisite changes in the plan of the building have been already commenced.

ACCIDENTS.—At Alnwick Castle there are hydraulic lifts for removing heavy articles from the lower to the upper apartments. When the lift arrives at its highest point there is only about the space of a foot between the iron framework of the cage and the ceiling. Two men were lately employed at the lifts, when, from some misunderstanding, one was crushed dead against the ceiling on the ascending lift. The accident was not discovered until some hours later.——On the new line of railway now in course of construction by the South-Eastern Railway Company between Deptford and Lewisham, a party of excavators were at work cutting away a portion of the chalk embankment, and had just completed their work, when, without any warning, a mass weighing nearly 100 tons suddenly fell, burying four of the unfortunate fellows. A truck was completely smashed. After a short time two of them were reached, still alive, and conveyed to Guy's Hospital. The other two were dead.

THE SANITARY CONDITION OF OUR WATERING-PLACES.—Visitors, having had their attention turned to this subject, probably by what was recently said in the *Builder*, and largely quoted in the newspapers, are complaining to the *Times* and other papers of the sanitary state of Cromer in Norfolk, Tenby in Pembrokeshire, and Penmaenmawr in Carnarvonshire. Cromer is drained into its own "delightful sands:" Tenby is partly drained into some "attractive caves;" and Penmaenmawr is drained not only into the beach, but into numerous open ditches, between the villas and the lodging-houses on the hill-side. It is to be hoped that the authorities of these and other well-frequented watering-places will, for their own interests, no less than for the benefit of their visitors, now do something to put an end to such injurious proceedings.

ALUMINIUM.—A new method for obtaining this metal at a very small cost has just been discovered, says *Galignani*, by M. Corbelli. He takes a certain quantity of pure clay, say 100 grammes, and dissolves it in six times its weight of concentrated sulphuric, nitric, or hydrochloric acid. The solution is then allowed to stand, and afterwards decanted. The residue is first dried and then heated to 450 or 500 degrees centigrade; after which it is mixed with 200 grammes of prussiate of potash, which may be increased or diminished according to the quantity of silica contained in the clay. To this mixture 150 grammes of common salt are added. The whole is then put into a crucible and heated until the mixture becomes white: when cool, a button of pure aluminium is found at the bottom of the crucible.

LIVERPOOL INSTITUTION OF FINE ARTS.—The annual meeting has been held, Mr. John Torr presiding. The committee reported that the first exhibition had proved most satisfactory, having been visited by nearly 20,000 persons. The treasurer's account showed a clear balance of profit of 182*l.* 11s. 4d., of which 71*l.* 8s. 5d. was in favour of the exhibition account. The committee had resolved to offer a prize of 50*l.* for the best picture in the Exhibition now open. The committee hoped in future to receive the more unanimous co-operation of the artists of the Liverpool Academy. The chairman regretted the want of unanimity, which had led to there being three exhibitions instead of a concentration of effort in one. He saw no reason to fear, by proper management and courteous demeanour, by asking them what was the real cause of their severance, and on what terms they would join them, that an amalgamation might take place, and the two exhibitions be successfully united. Mr. Baruchson, recurring to a paragraph in the report in allusion to a permanent Exhibition, said he trusted that the project which they had so long had before them of obtaining for the town a splendid building worthy of art, in which they could have their annual Exhibition, and in which also there could be a permanent gallery, would soon be accomplished. The report was adopted.

THE BUILDING TRADES MOVEMENT.—The bricklayers, joiners, plasterers, and slaters, of Chester, have struck work. The number of men out of employment by the strike is very nearly 1,000. The ground of complaint appears to be, that the men are not at once allowed, as they have lately required of the masters, to leave off work at twelve o'clock on Saturday, instead of four o'clock, as at present, and to be paid their full wages at one o'clock. One firm of the town, the Messrs. Hitchens, of Canal Wharf, have granted the request. Several deputations from the men on strike have waited upon the various firms, but as yet no definite arrangement has been come to. A correspondent of the *Chester Chronicle* says, "There is not in Chester an employer of twelve men that is not at the present time under engagements with contracts that will extend considerably over six months. These contracts were taken long before a reduction of the hours of labour was mooted. Should the masters concede to the most unreasonable request of the men, they of course must pay for the alteration out of their own pockets, which you will, I am sure, agree with me in saying is most unfair, and which imposition, I am very glad to find, the masters are determined at any cost to *resist*. If the men wish for a reduction to be made in the hours of labour, by leaving off at half-past twelve on Saturday, instead of four, let them give the employers six months' notice to that effect, and I feel sure their request will be amicably complied with."

LIABILITY FOR OBSTRUCTION OF ANCIENT LIGHTS.—The Lord Chancellor, in the case of Jackson *v.* The Duke of Newcastle, decided that an injunction to restrain an infringement of ancient lights ought not to be granted unless the infringement materially injures the comfort of the existence of those who dwell in the building, or renders the building to a material extent less suitable for the purpose or business to which it is applied. The Court will, however, afford redress by an assessment of compensation in damages, which the Lord Chancellor did in this case.

RIVER IMPROVEMENTS AT BRISTOL.—The plans for the proposed improvement of the river Avon have been completed by Mr. Howard, the engineer of the docks, and the Docks Committee are expected shortly to lay a report on them before the Corporation. The scheme proposed consists of the construction of a large lock from the Cumberland Basin into the floating-harbour, to enable steamers to "lock-in" earlier and get out later than at present, and another large lock from the river into Cumberland Basin, by which steamers may be enabled to "lock-in" earlier on the tide, and a much easier entrance and departure for large steamers would be afforded. With respect to the improvements in the river, it is proposed to cut away the Hotwell-house Point, all the points down to what is called the Pheasant Quarry, which is situate opposite the Black Rock, and to effect the partial removal of the Round Point and the Tea and Coffee-house Point. These improvements would remove the obstructions alleged to have caused the accidents to ships in the river. Facilities will also be thereby afforded for steamers of larger burthen coming up the river and entering the harbour than now. The whole scheme, it is estimated, would not exceed 300,000*l.*

TENDERS.

For stabling, &c., to be erected at Shadwell, for Mr. G. Painter, of the Ship and Turtle Tavern, Lead-enhall-street. Messrs. Smith & Williams, architects. Quantities not supplied:—

Cocks	£773	0	0
Little	611	0	0
Ennor	529	0	0

For works at the estate of the Greenwich Tannery Company at Barking. Mr. James Edmeston, architect:—

Manly & Rogers	£2,269	0	0
Killby	2,247	0	0
Watts	2,183	0	0
Hill & Keddell	2,175	0	0
Sims & Marten	2,077	0	0
Stephenson	2,039	0	0
Holmes	2,038	0	0
Dover	2,000	0	0
Cordery	1,975	0	0
Tongue	1,950	0	0
Donelly	1,934	0	0
Lucas	1,905	0	0
Fisher	1,903	0	0
Sutton	1,850	0	0
Hubbard	1,827	0	0
Ring & Company	1,679	0	0

For parsonage house, Holy Trinity district, Lambeth. Mr. Ewan Christian, architect. Quantities by Mr. Rickman:—

Lathey, Brothers	£1,845	0	0
Rhodes & Roberts	1,797	0	0
Meears	1,790	0	0
Sharpington & Cole	1,789	0	0
Jackson & Shaw	1,788	0	0
Dove, Brothers	1,795	10	0

For Goldington schools, near Bedford. Mr. James Horsford, architect:—

Houghton	£1,253	0	0
Canvin	1,185	0	0
Winn & Foster	1,183	0	0
Dickins	1,097	0	0
Warren, Tysoe, & Gestick	1,091	0	0
Haynes	1,089	0	0
Jackson	1,087	0	0
Bryant	1,072	0	0
Hinton	1,071	0	0
Coo & Hale	980	0	0

For Bell Hotel, Gloucester:—

Dutton	£11,500	0	0
Griffiths	10,850	17	0
Cutterick	10,770	0	0
Warburton, Brothers	10,250	0	0
Sheppard & Meredith	9,925	4	0
Estcourt	9,650	0	0
King & Godwin	9,488	0	0
Jones & Co.	9,200	0	0

For alterations and additions to No. 75, Upper-street, Islington, for Mr. H. S. Symons. Mr. Thomas Hill, architect:—

King & Sons	£695	0	0
Dove, Brothers (accepted)	675	0	0

For building dwelling-house at Sydenham. Mr. Nicholas Lake, architect:—

Amer	£624	0	0
Lugg	606	0	0
Heath	593	0	0
Barrett	593	0	0
Wood & Munn	587	0	0
Wills	579	0	0

For building cottage at Sydenham. Mr. N. Lake, architect:—

Barrett	£227	0	0
Amer	215	0	0
Lake	179	0	0

For repairs to St. James's Church, Bermondsey. Mr. N. Lake, architect:—

Wills	£210	0	0
Kent	191	0	0
Lugg	179	0	0

Accepted for enlarging the Bolland Industrial Schools, Morpeth, for the Hon. and Rev. F. R. Grey, rector. Mr. F. R. Wilson, architect:—

Masonry and Brickwork.

Hudspeth	£209	13	0

Joinery, Painting, and Glazing.

Forster	103	5	6

Slater's Work.

J. Cranston	23	0	0

Plumbing, Gasfitting, &c.

T. Cranston	19	2	6

Accepted for new kitchen wing to Mrs. Taylor's residence, Beadnell, Northumberland. Mr. F. R. Wilson, architect:—

Mason's Work.

Brewis	£247	11	0

Joiners' Work.

Summers	133	10	0

Plumbing, Glazing, and Smith's Work.

Wilkin & Dickman	144	6	6

Slater's Work.

Wood	18	0	0

Plasterer's Work.

Coldwell	33	10	8

Accepted for new entrance porch, enlarging conservatory, &c., at Newton Hall, Northumberland, for Mrs. Widdrington. Mr. F. R. Wilson, architect:—

Mason's Work.

Wharrier	£116	9	0

Joiner's Work.

Forster	23	17	6

Smith's Work.

Bowey	36	16	0

Slater's Work.

Jeffrey	13	14	0

Model for Heraldic Panel.

Bulletti	9	5	9

Stone Carving.

King	14	5	9

For alterations to No. 14, North-street, Brighton, for the Hampshire Banking Company. Mr. Horatio N. Goulty, architect:—

Dancy	£702	0	0
Chappell	690	0	0
Reynolds (accepted)	670	0	0

For sundry alterations and additions to the Limes, North Brixton. Mr. C. Couchman, architect:—

A. M. Cohen & Co. (accepted)	£337	0	0

For villa and stables at Sutton, Surrey. Mr. Woodthorpe, architect.—

	House.	Stables.
Rider	£2,180	£190

CHURCH, TURRET, and STABLE CLOCKS.

J. W. BENSON, having erected steam-power and improved machinery for clock-making, at the manufactory, Ludgate-hill, will be glad to furnish to clergymen, architects, and committees, Estimates and Specifications of every description of Horological Machine, especially cathedral and public clocks, chiming tunes on any number of bells. A descriptive pamphlet on Church Clocks post free for one stamp. Watch and Clock Maker by Warrant of Appointment to H.R.H. the Prince of Wales, and maker of the great clock for the Exhibition, 1862. 33 & 34, Ludgate-hill, E.C. Established 1749.

NOTE.—*The responsibility of signed articles, and papers read at public meetings, rests, of course, with the authors.*

The Publisher cannot be responsible for ORIGINAL TESTIMONIALS *left at the Office in reply to Advertisements, and strongly recommends that* COPIES ONLY *should be sent.*

Advertisements cannot be received for the current week's issue later than **FIVE** *o'clock, p.m., on Thursday.*

ADVERTISEMENTS.

NEW EDITION OF MR. FAIRBAIRN'S WORK ON IRON.
In 1 vol. 8vo. with 6 Plates and 118 Woodcuts, price 18s.
THE APPLICATION of CAST and WROUGHT IRON to BUILDING PURPOSES.
By W. FAIRBAIRN, C.E. F.R.S. &c.
Third Edition, greatly enlarged; including a short Treatise on Wrought-iron Bridges.
Also by Mr. FAIRBAIRN, in 2 vols. 8vo. price 16s. each,
(Vol. I. New Edition).
TREATISE on MILLS and MILLWORK
USEFUL INFORMATION for ENGINEERS,
2 vols. 10s. 6d. each
London: LONGMAN, GREEN, & CO. Paternoster-row.

Price 1s. each; by post for Thirteen Stamps,
WILSON'S LEGAL HANDY BOOKS.
1. BILLS, CHEQUES, NOTES, & I O U's.
2. BANKING: its Customs and Practice.
3. HUSBAND and WIFE: Marriage and Divorce.

2nd. STAFFORDSHIRE AND FIRE GOODS,
MALM CUTTERS, PICKINGS,
AND BUILDING GOODS GENERALLY.
A good Stock on the Wharf. Bricks, Sand, Ballast, &c. by barge alongside, where required.
JOHN DOWNEY, Victoria Wharf, Nine Elms, S.
Also Licensed Lighterman, of 11, Millbank-row, S.W.; and Licensed Lighterman and Wharfinger, of Hermitage Steam Wharf, Wapping, E.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

THE CHALLENGE.
OATES'S PATENT SOLID BRICK MACHINE.—To CONTRACTORS, BUILDERS, BRICKMAKERS, and OTHERS.—Few persons about to establish Brickworks, or to enter into large Contracts, are respectfully requested to the machinery to inspect the above Machines, which may be seen in operation at the undermentioned works. These Machines are guaranteed to produce at the rate of "Thirty Bricks" (and upwards) per minute, sufficiently dense to be wheeled direct from the Machine to the kilns; and, with ordinary clay, bricks can be made direct from the mine without any previous preparation.—To view apply to the Government Dockyard, Anchorage, Portsmouth; GEORGE SMITH & Co. Contractors, 13, South-street, Gravesend, Kent; Messrs. London; EARL MANVERS'S New Patent Brickworks, Threapwood Park, near Overton, Notts. JOHN GRUNDY, Esq. J.P. The Dales, Whitefield, Manchester; JOSEPH MARSDEN, Esq. Bolton-le-Moors, Lancashire; Mr. J. WALKER, Contractor, Patent Solid Brick Co., Crewe, Cheshire; Mr GRADWELL, Hilspool Saw Mills, Barrow-in-Furness, Lancashire; or at the Works of the Stourbridge Solid Brick Company, Brettell lane, near Stourbridge—parties who are working the machines, and have kindly consented to give every information.—To treat, or for drawings of same, apply to the Patentee, Mr. J. P. OATES, Erdington, near Birmingham; or to Mr T. S. CROSS, Sole Agent and General Manager, St Mary's Lodge, Buckhurst hill, near Woodford, Essex, and Epping Forest New Patent Brickworks.

IMPORTANT TO BUILDERS.

ROBERT B BARKE, Clerk.
No. 3, Crosby-square, Bishopsgate-street, London, E.C.

BLACKHEATH.—A Gentleman is desirous of DISPOSING of FLOTS of FREEHOLD and LEASEHOLD LAND, forming eligible sites for private residences, being within three minutes' walk of the railway station.—For terms and particulars, address, Mr F. F. HOINE, Architect and Surveyor, 4, Corbet-court, Gracechurch street, and Lee, Kent.

TWICKENHAM PARK, near RICHMOND.—Most Eligible BUILDING LAND TO BE LET on Lease, for Ninety-one Years, in Large or Small Plots. Money advanced, if required.—For particulars, apply to W. BACKHOUSE, at the Estate Offices, Twickenham Park; or EDWARD GUILLAUME, Esq. 14, George-street, Mansion House, London.

SURBITON.—TO BUILDERS and OTHERS.—LAND TO BE LET, on building leases, five minutes' walk from the station, and close to the river, for houses of not less than 80l. a year rent; a portion of the money will be advanced if required.—Apply to Mr. MUDIE, Victoria-road, Surbiton.

LONDON BRIDGE (NEAR).—TO BE SOLD, the LONG LEASE and possession of a large HOUSE and SHOP in the same road, with a newly erected large light Fourstoried Workshop adjoining in the rear, suitable for any trade requiring both space and publicity. Will be let together or separately.—Apply at Estate Office, 21, Walbrook, City.

LAND TO BE LET, by Tender, on the 20th SEPTEMBER, by the Fishmongers' Company, on a BUILDING LEASE, for ninety years, situate on the east side of Paddington-lane, in the centre of the fruit market, containing a frontage of 36 feet 6 inches, with a medium depth of about 76 feet, highly suitable for warehouses, shops, or other business premises.—Apply to Mr. W B TOWSE, Fishmongers' Hall, London Bridge; or to Mr. RICHARD SUTER, Architect and Surveyor, No. 23, Great Queen-street, where plans and particulars may be seen.—Tenders to be delivered before TWELVE o'clock on the 20th SEPTEMBER, 1864.

A FREEHOLD MANSION TO BE SOLD.
The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 50 feet in length; eleven bed-rooms; stabling for eight horses and coach-houses for four carriages; suitable servants' offices; extensive ornamental grounds, with greenhouses, in all 3a acres; gravelly soil; near Bunnfingdale Station, South-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J BOWEN MAY, Esq. Solicitor, 87, Russell-square.

FREEHOLD LAND TO BE LET, on
Building Leases, at low ground-rents, on the estate of the Carpenters' Company at Stratford, Essex, close to the Station and the Highstreet; one portion with river frontage, for the erection of manufactories, and another for small houses or cottages.—For plans and particulars, apply at the Clerk's Office, Carpenters' Hall, London-wall.

FREEHOLD BUILDING LAND, on the Borders of the City.—TO BE LET, on a Building Lease, TWO Extensive SITES, near Bunhill-row and Chiswell-street, on the borders of the City of London, suitable for warehouses, manufacturing premises, or stabling. One contains 5 165 square feet; the other 1 760 square feet.—Apply to Messrs. DEBENHAM & TEWSON, No. 80, Cheapside.

VALUABLE and Extensive Waterside PREMISES, close to Queen-street and Southwark Bridge, in the City of London. To Wharfingers, Builders, Warehousemen, and Others.—TO BE LET, the Extensive BLOCK of New Fireproof WARE HOUSES known as Queenhithe Dock, having a frontage of 140 feet to the River Thames, and almost exclusive use of the dock, where vessels of 150 tons can lay by.—Further particulars of Messrs. DEBENHAM & TEWSON, 81, Cheapside.

TO LET, the GALLERY of the SOCIETY of BRITISH ARTISTS, consisting of five large Rooms, until the end of February.—Inquire on the Premises.
THOS. ROBERTS, Secretary.

RAMSGATE.—To BUILDERS, CAPITALISTS, and OTHERS.—TO BE SOLD or LET, several valuable Plots of FREEHOLD LAND, situate on the East Cliff, and adjoining the site of the proposed new Hotel.—Apply to WALLER & SON, 4, Lyall-street, Belgrave-square, London; or of Messrs. FRIEND & VINTEN, House agents, Ramsgate.

OLD KENT ROAD.—TO BE LET, capital BUILDER'S PREMISES, comprising a superior brick-built carpenters' shop, 84 feet by 24 ft; six-bay under, one story, with brick saw-pits, and folding-gates to back entrance; stable for two horses and set-house, good yard and entrance, also the shed in front, containing three bed-rooms, drawing-room, two parlours, large kitchen, wash-house, &c.—For terms and orders to view, apply at Mr H SOWDON'S Offices, 21, 0, 31 Kent-road, S.E. and 19, Montgomery-street, E.C.

TO BUILDERS and OTHERS.—WANTED a HALL or LARGE PREMISES, that could be converted into a place for the Exhibition of a Diorama. Clerkenwell, Shoreditch, Whitechapel, or other parts of neighbourhood and large thorough fare.—Address, J. H. No 2, Southampton place, Gloucester-road North, N.W.

FREEHOLD FAMILY RESIDENCE, with Five acres and a half of Land attached, TO BE SOLD, with immediate possession, situate at West Hill, Wandsworth, within three-quarters of a mile of Putney Railway-station. The house is of attractive elevation, in the front and rear, lofty light, and well-arranged for a good and appended family residence. It contains entrance hall, dining, and breakfast rooms, one bed room and dressing room, and capital domestic offices, enabling for eight horses, and double coach house. In the lawn and pleasure grounds are numerous evergreen deodars, and other trees, excellent walled fruit and kitchen garden, green house, and melon ground. There are cow houses, poultry houses, and other out-buildings. At the rear is a paddock of 4 acres, bounded by walks and belts of trees which seal, and shelter, and screen from the residence and grounds, and having a frontage to the road to Merton, might be appropriated as sites for the erection of villa residences.—For terms and cards to view, apply to Mr EDWARD SAUNDERS, Surveyor, Land Agent, and Auctioneer, 8, Bridge-street, Westminster.

FREEHOLD WHARF PROPERTY, Millbank-street, Westminster.—TO BE SOLD, with immediate possession, a commodious RESIDENCE, situate No. 18, Millbank-street, with stabling for twenty horses, coach-house, waggon sheds, large coal, flour, and hay stores, lofts, and yards, having a wharf frontage to the Thames of 48 feet, also a frontage of 85 feet to Millbank street, and be 90 feet in depth. For terms and cards to view, apply to Mr. EDWARD SAUNDERS, Surveyor, Land Agent, and Auctioneer, 8, Bridge street, Westminster.

FREEHOLD INVESTMENT in WHARF PROPERTY, Millbank street, Westminster.—FOR SALE, by Private Treaty, an ex eligible STEAM FLOUR MILL, with dwelling house, situate 17, Millbank-street, Westminster, having 26 feet wharf frontage to the Thames, and a frontage to Millbank street of 16 feet, on lease to Messrs. Finch & Co. for a term of which fifty-three years are unexpired, at a ground-rent of 26l. per annum.—For terms, apply to Mr. EDWARD SAUNDERS, Surveyor, Land Agent, &c. 8, Bridge-street, Westminster.

MILLBANK STREET, Westminster.—Mr. EDWARD SAUNDERS is instructed to SELL a commodious FREEHOLD WHARF, having 31 feet frontage to the Thames, with dwelling house, stabling, and other outbuildings, situate No. 19, Millbank-street, Westminster, in the occupation of Mr Utley and the Carrara Marble Company. Also an eight-roomed House, with shop, being No. 20, Millbank street, in the occupation of Mr. Abbott; and a similar House, being No. 21, Millbank-street, in the occupation of Mr. Butt. The whole premises are on lease, of which about twenty years are unexpired, at a ground-rent of 38l. per annum, after which time a purchaser will be entitled to the estimated rack rents of 400l. per annum.—For terms, apply at the Estate and Auction Offices, 8, Bridge-street, Westminster.

BUILDING LAND TO BE LET, situate at Vauxhall, Leytonstone, and Camberwell.—For particulars apply to Messrs. DRIVER & CO. 4, Whitehall, London, S.W.

TO BE LET, for BRICKMAKING purposes, 10 Acres of LAND, six miles from Paddington, and a quarter of a mile from Sudbury station, Harrow-road, and close to the Canal.—For particulars, apply to W. BOWRON, 14, Churton-street, Pimlico, S.W.

STONE QUARRY, BRICKYARD, FREEHOLD LAND and COTTAGES, at Berkswell, near Coventry, adjoining the Railway station.—TO BE SOLD, by PRIVATE TREATY, a Piece of FREEHOLD LAND, containing 4 out three Acres, with two Cottages, Clay Mine, and Mine of Building Stone. The Clay is of good quality, averaging 10 feet thick, and sufficient quantity for several millions of bricks; the top of the Clay strata is about 8 feet above, and adjoining the highway, and is suitable for best front Bricks, Tiles, or Quarries. The Mine is now being worked. The Stone is a light weather building stone, being the Knullworth strata. The buildings near the Property show specimens of the Stone and Bricks. Also two Pieces of LAND, containing about two Acres, adjoining the Railway, and having considerable frontage to the road, suitable for Wharfage or Building. Also two COTTAGES and Gardens adjoining. A portion of the purchase money may remain at interest.—Apply, for further particulars, to Messrs. HOLBECHE & ADDENBROOKE, Sutton Coldfield; Messrs. POTTER, Estate Agents, Cherry-street, Birmingham; or to Mr. HORTON, Berkswell, where Plans may be seen.

WIMBLEDON.—Valuable FREEHOLD BUILDING LAND, in a beautiful and notably healthy situation about a mile from the Putney Station, and only a pleasant drive from Richmond Park and the West End of London, TO BE SOLD as a whole or in plots, offering a select on of choice sites to any gentleman desirous of building for his own occupation; whilst as a building speculation it presents unusual advantages from the constant and increased demand for houses in the neighbourhood, which is one of the most favourable within so short a convenient, and accessible a distance of town. The land affords ample space for the erection of about thirteen detached residences, or a greater number of semi-detached villas, and the chief part is land-tax redeemed.—Messrs. DEBENHAM & TEWSON, 80, Cheapside.

W. C. HAWKER,
LIME, CEMENT, & PLASTER MERCHANT,

HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.
ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent. Whether sold under the name of "improved Zinc Paint," or as the manufacturer Two or Three qualities, no workman can produce good work with such kinds. All Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS.—Not only is it cheaper [illegible] hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.
EACH CASK is STAMPED "HUBBUCK, LONDON, PATENT."

Goods made to Pattern on the Shortest Notice and most Reasonable Terms. Shipping Orders executed with Dispatch.

HYDRAULIC LIME and ROMAN CEMENT, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Liverpool Docks, Manchester, and various waterworks, collieries, and mines throughout the country, being so long celebrated for its strong cementitious and connecting powers for masonry in water. Can be supplied by rail or water to any part of the kingdom, either in lump (loose), or ground, and in barrels and bags. The limestone can be had in full cargoes, also their Cement in barrels, which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference. Apply at the Works; or to R. & W. AARON, Agents, 69, South John-street, Liverpool.

PURE HYDRAULIC LIME, Manufactured from the best HALKIN MOUNTAIN LIMESTONE, same as supplied for the construction of the Liverpool and Birkenhead Docks. The HOLYWELL LIMESTONE COMPANY are prepared to deliver the above, in lump or ground, packed in bags, into waggons, at the Holywell Station of the Chester and Holyhead Railway, or on board vessels at Greenfield Wharf, Chester River.
Prices and particulars furnished on application to Mr. EVAN EVANS, Manager, Pary's Mine Works, Holywell, Flintshire.
The Company guarantee the quality of the Lime to be equal to that used by the Engineer of the Liverpool and Birkenhead Docks.
Agents wanted. No applications attended to without a banker's reference.

PLASTER of PARIS.—The ONLY London Maker, the best and the oldest established (1830), is ROBESON,
MOUNT PLEASANT, GRAY'S-INN-ROAD, HOLBORN.
The cheap country made article is sold by nearly all the dealers, agents, and pretending manufacturers, careless as to quality. Superfine and fine Plaster unequalled. Good plaster saves labour and vexation.

INTERNATIONAL EXHIBITION, 1862.

CLASS 35, No 6343.

3s. 9d.

The ONLY MEDAL "for STONEWARE" has been awarded to DOULTON & WATTS, LAMBETH POTTERY, LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their CAMELLED STONEWARE CLOSET PANS, at the price of the commonest description of earthenware.

Experience has shown that it is one of the most simple and efficient, and the cleanliness it cannot be surpassed by the most expensive closets.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

PEADE & HEWITT'S PATENT PNEUMATIC PAN and SELF-ACTING WATER CLOSETS, RAILWAY URINAL, and SEWER FLUSHING APPARATUS.

The simplest, improved, and cheapest Closets manufactured, acting efficiently with or without Supply Cistern, and at high or low pressure. Specially adapted for railway stations, offices, public buildings, workshops, and baths and dairies where supplied to severe usage. Prevents waste of water, saves piping, cranks, wires, service-box, and all the complicated apparatus of most other closets.

The self-acting Automatic Flushing Vessel flushes ranges of urinals regularly at intervals, the time between the discharge being regulated by a simple tap, thus saving an immense quantity of water, which is usually run to waste.

Best Pan Closet, complete	£2 12 6
Best Self-acting Closet, complete	2 15 0
Railway Urinal Flushing Vessel, complete	3 3 0

LIVERPOOL, No. 5, WELLINGTON BUILDINGS, SOUTH CASTLE STREET.

Canons' Marsh, Bristol, September 6th, 1864.

FREEHOLD BUILDING LAND, ten miles by rail from London Bridge, in KENT, part of the Estate of the late Western Wood, esq.

MR. ABBOTT is instructed to SELL by AUCTION, at the GUILDHALL COFFEE-HOUSE, in the City of London, on WEDNESDAY, the 28th of SEPTEMBER, 1864, at ONE o'clock precisely, TWELVE ACRES and a HALF, in one Plot, of FREEHOLD LAND, another Freehold nearly adjoining, containing One Acre and Fifteen Perches, both with extensive building frontages to the old roads, in the immediate vicinity of the London and Dartford Railway, now nearly completed, and close to the land upon which it is proposed to build a first-class station, situate on the north side of the London-road, at Sidcup, a hamlet in the parish of Foots Cray, affording really eligible sites for building, with cheap and easy access to the Metropolis. Printed particulars, with plans and conditions of sale, may be had of F. WILMOT, Esq. Solicitor, 82, Highstreet, Borough of Southwark; of Mr. KEELEY, of Sidcup, who will show the land; and of Mr. ABBOTT, 26 Bedford-row, Gray's-inn, London, and Eynesbury, St. Neots, Huntingdonshire.

ROYAL MILITARY HOSPITAL, NETLEY, HANTS.—Clearance Sale—To Builders and Others.

E. & W. TRIGG are favoured with instructions from the Contractors, Messrs Myers & Sons, of London, to SELL by AUCTION, on the GROUND, as above on WEDNESDAY, SEPTEMBER 14th, 1864, at ELEVEN o'clock, without reserve, about 130,000 capital BUILDING BRICKS, together with ten bricks and timber-built COTTAGES, a large quantity of useful timber, wrought and cast scantling, numerous benches, wheelbarrows, ladders, and miscellaneous property.—May be viewed on and after Monday, the 12th, upon application to Mr. ADDIS, of whom Catalogues may be had; or of the Auctioneers, at their Temporary Offices, 5, High street (during alterations at the Hampshire Bank), Southampton.

BERKSHIRE.—Building Land, opposite to the Wellington College and close to the Railway station, with important frontage, for the erection of Villas or Public Institutions.

MR. ROBINS having disposed of the first portion of the estate, is instructed to SELL by AUCTION, at GARRAWAY'S COFFEE-HOUSE, Change-alley, Cornhill, on FRIDAY, OCTOBER 14, at TWELVE for ONE o'clock in three or more lots, unless an acceptable offer be previously made by private contract, FREEHOLD BUILDING LAND, containing about 100 acres, lying unusually compact, with an important and most valuable south frontage, for the erection of villas, immediately opposite the Wellington College, adjoining the village of Crowthorne, but three miles from the market town of Wokingham. The land offers great attention to the choosers of villa residences, as strong lots of 20 acres, and to builders, tradesmen, gentlemen, &c. as small lots of 2

BUILDERS' BENEVOLENT INSTITUTION.—The SEVENTEENTH ANNUAL DINNER will be held at the LONDON TAVERN, on THURSDAY, 27th OCTOBER, next, THOMAS C. LUCAS, Esq., President of the Institution, in the Chair. Gentlemen locally promoting the interests of the Charity by becoming Stewards will be pleased to forward their names to the Treasurer, GEORGE PLUCKNETT, Esq. (Messrs. Wm. Cubitt & Co.), 98, Grey's Inn-road, or to the Secretary, at the Offices, 23, Southampton-street, Bloomsbury, W.C. A. G. HARRIS, Sec.

BY Order of the Secretary of State for India in Council.

Notice is hereby given, that Ten Junior Appointments in the Engineer Establishment of the Department of Public Works in India will in the year 1865, be open to Public Competition.

A Competitive Examination will, accordingly, be held in this Office in the month of June next. Full printed particulars of the conditions on which Candidates will be admitted to the Examination may be obtained at this Office, on application, either personally or by letter addressed to the "Under Secretary of State for India, India Office, London, S.W."

India Office 14th July, 1864.

THE ARCHITECTURAL MUSEUM, SOUTH KENSINGTON MUSEUM, W.

The following PRIZES to ART WORKMEN are now offered:—

For Wood carving 2*l*. and 1*l*.

For Silver Work, 10*l*. and 5*l*. 5*s*. (the latter given by Mr. H. Heather Bigg, of Wimpole-street)

For Transparent Enamels, 10*l*. (given by Mr. Ruskin).

Smaller Prizes will be added at the discretion of the Council.

Full particulars may be had either by a letter to the Honorary Secretary, at 13, Stratford-place, London, W. inclosing a directed and stamped envelope; or of the Attendant at the entrance to the South Kensington Museum; or at the Office of "The Builder," York-street, Covent-garden.

A. J. B. BERESFORD HOPE, President.
GEO. GILBERT SCOTT, Treasurer.
JOSEPH CLARKE, Honorary Secretary.

SCOTTISH NATIONAL MEMORIAL to HER THE PRINCE CONSORT.—The Committee of Advice nominated by her Majesty are now prepared to receive DESIGNS to be submitted to her Majesty for the SCOTTISH NATIONAL MEMORIAL to the PRINCE CONSORT about to be erected in Edinburgh or its immediate neighbourhood. Of the Sites which have been suggested for the Memorial, the most eligible appear to be:—

1. A knoll on the Spur or Ridge running NNE. from Arthur's Seat, and about 240 feet above the sea.
2. West Princes-street Gardens, at the foot of Frederick-street or Castle street.
3. East side of Charlotte-square Garden, facing George-street.
4. The Queen's Park, in the immediate neighbourhood of Holyrood Palace.

The Committee, however, desire especially to direct the attention of artists to the first named of these sites, which offers many advantages. A national memorial in that commanding position would be seen by persons approaching Edinburgh at a greater distance, and from a wider circle both of the city and the country, than almost any other available station. At the same time, it is not desired absolutely to restrict the suggestion of any other site which an artist may consider specially suitable for his design. The amount of funds at the disposal of the Committee for the erection of the memorial is limited; and the Committee regret that they are therefore unable to offer premiums or to remunerate any unsuccessful competitor for his design. It is requested that all models and drawings, not already prepared, may be furnished on a scale of one inch to the foot. No Design can be received after the TENTH day of DECEMBER.

125, George-street, Edinburgh, 5th September, 1864. W. S. WALKER, Hon. Sec.

BATH MEETING of the BRITISH ASSOCIATION.—At the close of the Meeting of the British Association in Bath, the "Bath Daily Chronicle" SPECIAL REPORTS of the Sections, Soirées, Meetings, Excursions, Banquets &c. will be reprinted in Book Form, royal 8vo. size. The volume will be bound in an illustrated cover, and will form the completest and most compact record of any meeting of the Association yet published. It will be delivered (by permission) to Sir Charles Lyell, Bart. President of the British Association. A portrait of Sir Charles Lyell (after a photograph by Mayall), will be the frontispiece of the volume. Price 5*s*. Orders received at the "Chronicle" Office, Bath.

London Publishers: KENT & CO. Paternoster-row.

QUEEN'S COLLEGE, LIVERPOOL.—A CLASS for the STUDY of ENGINEERING and APPLIED MECHANICS will be OPENED on MONDAY, 3rd OCTOBER. The subjects taught in the College are Mathematics, Natural Philosophy, Chemistry, Geology, Drawing, Greek, Latin, French, German, English Language and Literature, History, Logic, Arabic, Hebrew, Sanskrit, Physiology, and Political Economy.—For prospectuses, apply to ASHRUP CARISS, Secretary, The College, Mount-street, Liverpool.

SCIENCE and ART DEPARTMENT of the COMMITTEE of COUNCIL on EDUCATION, South Kensington.—The ANNUAL EXAMINATIONS for Science Certificates for Teachers will take place in London, Dublin, and Edinburgh, in NOVEMBER. A Table of the days and hours appointed for each subject, and the places of examination, will be sent on application by letter to the Secretary, Science and Art Department, South Kensington, London, W. All applications for examination must be made before the 15th OCTOBER.

By order of the Lords of the
Committee of Council on Education.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72–74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Cooking Utensils, &c to meet the great public demand; and also for the consequent more extensive execution of all descriptions of hot water, bath, laundry, and steam work.

72–74, Bishopsgate street Within.

COMPETITIONS.

TO ARCHITECTS.—The SIR TATTON SYKES MEMORIAL.—The Committee for the Erection of a Memorial to the late Sir Tatton Sykes, Bart. are prepared to receive DESIGNS and ESTIMATES for the ERECTION of an OBELISK or COLUMN, on an elevated site on the Sledmere Estate, on the Wolds, in the shire Works, near Driffield. Designs and Estimates to be sent to the Honorary Secretaries, on or before the 1st day of OCTOBER next. Twenty guineas will be given for the design considered the most suitable by the Committee, and ten guineas for the second-best design.—Particulars to be had on application to

WM. TOPHAM,
F. C. MATTHEWS, } Hon. Secs.

Driffield, 1st August, 1864.

TO ENGINEERS, MILLWRIGHTS, &c. COMPETITION PLANS.—The Visiting Justices of the House of Correction, at Cold Bath Fields, Clerkenwell, are desirous of obtaining PLANS for the CONSTRUCTION of a SET of TREADWHEELS at that Prison, of sufficient extent and strength to work 24 mills at once. The length of the shaft in which the same are to be erected is 102 feet; breadth, 18 feet; height, 21 feet. Each plan is to be accompanied by an estimate of the cost, and a description of the proposed works; and must be forwarded to the Prison, with some motto or mark, and the name and address of the Tender, in a sealed letter, bearing the same motto or mark, by WEDNESDAY, the 5th of OCTOBER next. The Visiting Justices will give a premium of 75*l*. for the author of the plan which shall be most approved of by them; and this plan is to become their property, but they do not bind themselves to adopt it, either partly or entirely, nor to employ the author to construct, provide, or superintend the construction of the works.—Any further information may be obtained by application at the Prison, on any Monday, Tuesday, or Wednesday, between 11 and 1 o'clock.

JOHN S. SCAIFE, Clerk to the Visiting Justices.

August 26, 1864.

DESIGNS for FULFORD CHURCH.—A PREMIUM of FIFTEEN GUINEAS is offered for the best SET of DESIGNS for the new CHURCH at Fulford. Selection to be made by the Committee and the design selected to become the property of the parish. Extreme estimate 3,000*l*.; to seat not less than 450. Road frontage, west. The designs must be sent in to the Incumbent, care of the Postmaster, Fulford, on or before FRIDAY, OCTOBER 7th.

TO CONTRACTORS.—WANTED, ESTIMATES for the CONSTRUCTION of a WOODEN JETTY or PIER, at the Works of the Cunard's Quay Cheshire Coal Company, limited, at Cunard's Quay, near Flint. The specification and drawings, with full particulars, may be seen at the Company's Works, at Cunard's Quay, near Flint, or at the Office of the Engineer, JAMES WRIGHT, 12, Copthall-court, Throgmorton-street, London, from whom all particulars may be had. The Engineer will be at the Works on the 22nd and 23rd inst.

TO ARCHITECTS.—The Building Committee of the Presbyterian CHURCH and SCHOOLS proposed to be ERECTED in Prince's Park road, corner of Hill street, require Plans and Specification, and offer Premiums of 50*l*. and 10*l*. respectively, in order of merit, for the three best designs. The Committee confine the competition to Architects in LIVERPOOL and its immediate vicinity, and reserve to themselves the right of withholding the first prize, unless there be among the designs submitted one which they may deem advisable to adopt.—For printed instructions and further particulars, apply, by letter, to Mr. JOHN LLOYD, 12a, Catharine-street, Liverpool.

TO ARCHITECTS.—The Town Council of the City and Borough of Bath invite DESIGNS for the proposed NEW BUILDINGS, upon the site of the late White Hart Hotel, Bath, which are intended to comprise suites of rooms for families, together with hot and cold baths, mineral water, and Turkish baths in connexion with the present bathing establishment. The cost of the buildings not to exceed 15,000*l*. A premium of 250*l*. will be paid to the author of the design, to which the Town Council shall award the first place, and a premium of 100*l*. to the author of the design which they shall consider second in merit, and in the event of either of these designs being carried out, the premium of the author competing, if he be employed, will be deducted from the usual commission. The designs are to be delivered free of cost, at the Guildhall, Bath, properly endorsed, on or before NOVEMBER 29th, and the two designs to which premiums shall be awarded will become the absolute property of the Town Council, without any condition whatever. All designs to have the name of the author or authors attached, and to be coloured in accordance with the plans and are also to be drawn to a scale of 8 ft of an inch to a foot. A copy of the conditions to be observed by architects, with a plan of the site, and other particulars, may be obtained of the undersigned, on the payment of 10*s*. 6*d*. which will be returned to those forwarding designs.—By order,

JOHN STONE, Town Clerk.

Guildhall, Bath, September 8, 1864.

CONTRACTS.

WAR DEPARTMENT CONTRACTS.—NOTICE to BUILDERS.

TENDERS are required for the SUPPLY of MATERIALS and LABOUR for War Department WORKS, at Aldershott Camp, and Permanent Barracks, in the counties of Hants including Repairs to the existing buildings, under a Triennial Contract, from the 1st January, 1865, to the 31st March, 1868, determinable at any period after one year, on either party giving to the other three months' notice in writing.

Copies of the schedules, for which the sum of six shillings and nine pence for each copy must be paid on issue, together with forms of Tender, may be obtained on application at this Office.

Although the said schedules include prices for Work done and for day labour, the Contractor will, as a general rule, be called upon only to supply materials.

Tenders to be addressed, under cover, to the Director of Contracts, War Office, Pall Mall, London, S.W. endorsed, in the left-hand corner, "Tender for Works at Aldershott," on or before SATURDAY next, 24th NOVEMBER, by 4.

The Secretary of State for War does not bind himself to accept the lowest or any of the Tenders

Royal Engineer Office, Aldershott,
14th September, 1864.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.

TENDERS are required for the ERECTION of a CORRUGATED IRON SHED, with Curved Roof, 234 feet long and 27 feet wide, at the Gun Wharf, Portsmouth

Persons desiring to Tender for the execution of this Work will please leave their names at this Office, on or before the 20th SEPTEMBER, 1864, and pay the sum of 1*s*. 6*d*. for the Scale of quantities.

The Secretary of State does not bind himself to accept the lowest or any Tender. J. W. GORDON,

Colonel Commanding Royal Engineers

Royal Engineer Office, Portsmouth, 7th September, 1864.

COAST GUARD CONTRACT.—NOTICE to BUILDERS and CONTRACTORS.

Persons desirous of TENDERING for the ERECTION of a COAST GUARD STATION at Southsea, in the county of Hants, may inspect the Drawings and Specification at the Coast Guard Office, Southsea, or at this Office, between the hours of TEN and FOUR from THURSDAY, the 15th inst. to WEDNESDAY, the 21st day of SEPTEMBER, now next ensuing, and both inclusive (Sundays excepted).

Tenders to be sent to this Office not later than TWELVE o'clock at noon, of the 29th SEPTEMBER, under seal, directed to the Commissioners Controller General of Coast Guard, and endorsed "Tender for Southsea."

The Lords Commissioners of the Admiralty do not pledge themselves to accept the lowest or either of the Tenders.

Dated this 6th day of September, 1864, at the Admiralty, Coast-Guard Office, 13, Spring-gardens, London, S.W.

NOTICE to BUILDERS.—TENDERS are required for WORKS to be EXECUTED under a schedule of prices at Devonport, in the county of Devon, by the 1st COMPLETION of the LINES, and in certain WORKS connected with the EXTENSION of the GUN WHARF, near Newpassage Hill.

The schedules will be ready for delivery at this Office, on TUESDAY next, the 13th instant, at which time forms of Tender and Bond can obtain all necessary information by attending at this Office, and the sealed Tenders, addressed to the undersigned, will be furnished with schedules, forms of Tender, and notices how to proceed.

The Secretary of State for War does not bind himself to accept the lowest or any of the Tenders

Royal Engineer Office, Devonport, 2nd September, 1864.

TO BUILDERS and CONTRACTORS.—BUILDERS desirous of TENDERING for the ALTERATIONS and ADDITIONS to the MONTAGUE ARMS, Basildon, may obtain the ESTIMATES by the 21st day of SEPTEMBER, and Plans and Specification to be seen at Mr. G. MARTIN'S, South-parade, Trafalgar-square, Brompton, from ONE till FIVE p.m.

TO BUILDERS. — Persons desirous of giving TENDERS for the ERECTION of a CONGREGATIONAL CHURCH, Green-lane, Liverpool, may see the drawings, and obtain all information, by application to the Architects,

Messrs. WM. G. HABRISON & PITE,
38, Bloomsbury-square, London, W.C.

[For remainder of Contracts see next Page.

THE GREAT NORTHERN RAILWAY COMPANY.—LINCOLN to HONINGTON LINE.—CONTRACT for SLEEPERS.—The Directors of the Great Northern Railway Company are prepared to receive TENDERS for the SUPPLY of RECTANGULAR BALTIC SLEEPERS for this line, about 16½ miles in length. Parties disposed to Tender may obtain the specification and form of Tender, and the Improvements on the Loop-line extended over a distance of about 8¾ miles. Parties disposed to Tender may obtain the specification and form of Tender on which forms only Tenders will be received, at the Office of Mr. HENRY OAKLEY, 37, Great George-street, Westminster, S.W. on and after MONDAY the 12th SEPTEMBER, where all copies of the bridge drawings, and plans of the general plan and section, and other information may be obtained, on payment of £2 2s. each set. Tenders carefully sealed, and marked "Tender for Sleepers" (Lincoln to Honington Line), must be lodged at this Office before TWELVE o'clock at Noon on TUESDAY, 4th OCTOBER.

N.B.—The Directors do not bind themselves to accept the lowest or any Tender.

Plans and specifications may be seen on a election at the Town-hall, Scarborough, on and after FRIDAY, 16th SEPTEMBER instant. Tenders addressed "Tenders for Chapel," to be sent to the Town Hall on or before FRIDAY, 23rd SEPTEMBER instant. The Council do not bind themselves to accept the lowest or any Tender.

J. J. P. MOODY, Town Clerk.
Town-hall, Scarborough, September 1, 1864.

TO BUILDERS.—Parties desirous of TENDERING for the several WORKS required to be done in ERECTING the proposed New PRISON, Scarborough, may procure bills of quantities, and obtain all particulars, by applying to me, on and after SATURDAY, the 17th instant.

W. B. STEWART, Architect and Surveyor.
62, Claremont crescent, Scarborough, September 13, 1864.

BOROUGH of WOLVERHAMPTON, SEWERAGE WORKS.—CONTRACT No. 1.—TO CONTRACTORS.—Parties desirous of TENDERING for abt. 2½ MILES of MAIN SEWER, and the VENTILATING SHAFTS, MANHOLES, OVERFLOWS, TUMBLING BAYS, and other WORKS connected therewith, in the said borough, may inspect the plans, sections, detail drawings and specification, at the Office of the Borough Surveyor, Town Hall, North-street, on and after FRIDAY, the 9th day of SEPTEMBER, between the hours of ELEVEN o'clock in the forenoon and FOUR o'clock in the afternoon. Sealed Tenders to be sent in on or before THURSDAY, the 6th day of OCTOBER next, addressed to the "Sewerage Committee, Town-hall, Wolverhampton," and endorsed "Tender for Sewerage Works, Contract No. 1." The Committee do not bind themselves to be bound by the lowest or any Tender. No Tender will be received after SIX o'clock p.m. of the above named day. Security will be required for the due performance of the work. Printed copies of the specification and form of Tender may be obtained at the Borough Surveyor's Office, on payment of 5s.

E. J. PURNELL, Borough Surveyor.
Town-hall, Wolverhampton, September 5, 1864.

BUILDERS and CONTRACTORS willing to TENDER for REPAIRS and ERECTION of Additional BUILDINGS, required at Shottery Hall, near Stratford on Avon, may inspect plans, specification, and conditions of Contract, at the Offices of Mr. JOSEPH LATTIMER, Architect and Surveyor, Stratford on-Avon. Proprietor, Captain DOUGLAS CURRY, Royal Naval Hospital, Plymouth, to whom Tenders are to be forwarded. The Proprietor will not bind himself to accept the lowest or any Tender.

August 31st, 1864.

TO DUST CONTRACTORS and OTHERS.—The Vestry of St. Giles, Camberwell, The Committee for General Purposes hereby give notice, that they will meet at the Vestry Hall, Camberwell, on MONDAY, the 3rd OCTOBER next, at FIVE o'clock, to receive TENDERS for one, two, or three years, if the contractor so desired, the Vestry reserving to themselves the right of determining the contract at either of the periods, for the PURCHASE, COLLECTION, and REMOVAL of all ASHES, CINDERS, RUBBISH, DUST, BREEZE, REFUSE, FILTH, SOIL, &c. made or to be made from the several houses, streets, &c. in the districts of the parish—namely, the district of St. Giles, comprising Cumberwell Ward (except Peckham), and Camden Ward; the district of St. George, being St. George's Wards, Nos. 1 and 2; the district of Peckham, being Wards Nos. 4 and 5; and the district of Dulwich, being the Ward of Dulwich. Approved sureties will be required for the due performance of the contract, and the names and addresses of the parties proposed as such sureties must be delivered with the Tenders. The parties Tendering may be present at the Vestry when the Tenders are opened. The Committee do not pledge themselves to accept the lowest or any Tender. The form of contract may be seen at the Vestry Clerk's Office. The parties Tendering must insert in the Tender, and leave the same at the Vestry Clerk's Office, and deposit 25l for each district of the said Tender—Sureties.

GEO. WM. MARSDEN, Vestry Clerk.
Vestry Hall, Camberwell 13th September, 1864.

THE WEDGWOOD INSTITUTE.—TO BUILDERS.—EXTENSION of TIME.—The Committee invite TENDERS for the ERECTION of the INSTITUTE according to plans and specification, prepared by Mr. G. B. NICHOLS, of West Bromwich, which may be seen at the Town Hall, Burslem, on MONDAY, the 12th inst. and following days. The Tenders to be sealed, and addressed to "The Chairman of the Institute Committee, Town Hall, Burslem," endorsed "Tender for Building," and to be delivered not later than TUESDAY, the 20th. The Committee is not pledged to accept the lowest or any Tender.

Burslem, September 7, 1864. W. WOODALL, Hon. Sec.

PARISH of CHELSEA, in the County of Middlesex.—FLINTS.—The Vestry of the Parish will meet at the Vestry Hall, King's-road Chelsea, on TUESDAY, the 27th day of SEPTEMBER instant, at THREE o'clock in the afternoon precisely, to receive TENDERS from persons willing to CONTRACT for TWELVE MONTHS, from the 30th day of SEPTEMBER up to and inclusive of the 29th day of SEPTEMBER 1865, for the SUPPLY of the BEST CLEAN GREY BROKEN FLINT ROAD FLINTS, according to the sample to be seen here, to be delivered at the Free Dock, at Cheyne Walk, at such times and in such quantities as may be required. The Vestry do not bind themselves to accept the lowest or any Tender. Sealed Tenders addressed to the proposed contractor, with the names and description of two sufficient sureties for the performance of the contract, to be delivered to the Clerk, by or before TWELVE o'clock, on TUESDAY, the 27th day of SEPTEMBER instant. No Tender will be received unless made on one of the printed forms, to be obtained at my office.—By order,

CHARLES LAHEE, Vestry Clerk.
Vestry Hall, King's-road, Chelsea, September, 1864.

TO MASONS, PAVIORS, STONE MERCHANTS, and OTHERS.—The Vestry of the Parish of Chelsea will meet at the Vestry Hall, King's-road, on TUESDAY, the 27th SEPTEMBER instant, at THREE o'clock in the afternoon, to receive TENDERS from Persons willing to Contract, for Twelve months, for the EXECUTION of WORKS, and for the SUPPLY of MATERIALS come and into the Parish during the same time, as may be required and directed. Further particulars, with the form of Tender, may be had on application at the Office. Sealed Tenders, signed by the proposed Contractor, with the names and description of two sufficient Sureties for the performance of the contract, to be delivered to the Clerk, by or before TWELVE o'clock, on the succeeding SEPTEMBER instant. The deed of contract will be prepared at the expense of the Vestry. No Tender will be received or accepted unless made on the printed form.—By order,

CHAS. LAHEE, Vestry Clerk.
Vestry Hall, King's-road, Chelsea, September, 1864.

TO SEWER CONTRACTORS, BRICKLAYERS, and OTHERS.—The Vestry of the Parish of Chelsea will meet on TUESDAY, the 27th instant, at the Vestry Hall, King's-road, Chelsea, at THREE o'clock in the afternoon to receive TENDERS from persons willing to CONTRACT for Twelve months for the EXECUTION of GENERAL WORKS connected with the SEWERS and DRAINS, according to a schedule of prices now lying at the Office. Copies of the schedule of the Contract and form of Tenders may be had upon payment of 10s. to be returned to parties Tendering. The Vestry do not bind themselves to accept the lowest or any Tender, and reserve to themselves the right of making special Contracts if they shall see fit. Parties Tendering must be prepared to execute a Contract, to be prepared at the expense of the Vestry, and to provide sureties for the performance of the same if required. Tenders must be upon the printed form, and delivered to the Clerk by or before TWELVE o'clock on TUESDAY, the 27th instant. By order,

CHARLES LAHEE, Vestry Clerk.
Vestry Hall, King's-road, Chelsea, September, 1864.

TO BUILDERS.—QUEEN'S HOTEL COMPANY, ABINGDON (Limited).—Persons desirous of TENDERING for the ERECTION of an HOTEL STABLING TAP, &c. at Abingdon, may inspect plans and specifications either at the Office of Mr. BARTLETT, Abingdon, the Company's Solicitor, or on application to Mr. WILLIAM FISHER, Architect, Oxford.—Sealed Tenders to be sent to Mr. BARTLETT, properly indorsed, on or before MONDAY, the 26th instant. The lowest or any Tender not necessarily accepted.—By order of the Directors,

A. D. BARTLETT, Solicitor and Secretary.
Abingdon, Sept. 1, 1864.

BLACKFRIARS BRIDGE.—TENDERS will be received for the OLD STONE of this Bridge, consisting of Portland, granite in blocks and in steps, Kelch, Portland, and rough rubble. Also for the handsome columns, with moulded bases and carved caps.—Apply to Messrs. THORN & CO. Contractors, on the Bridge.

TEMPLE COMBE, SOMERSETSHIRE.—The Restoration of this Church having been POSTPONED in consequence of the lateness of the season, and some Additional Works being also contemplated, NEW TENDERS are invited for carrying on operations in the ensuing spring. The plans may be seen at the Rectory, Temple Combe, and the Tenders are to be sent in by WEDNESDAY, the 21st inst.

WEAR NAVIGATION and SUNDERLAND DOCKS.—To CONTRACTORS.—The River Wear Commissioners are prepared to receive TENDERS for the ERECTION of a NEW GRANARY at the South Docks, Sunderland. The drawings and specifications may be seen in application at Mr. THOMAS MEIK, Esq. C.E. Engineer's Office, Harbour and Dock Works, Sunderland, on and after the 15th SEPTEMBER, 1864. Tenders, in printed forms, which may be obtained at the Engineer's Office, and which only will be received, to be addressed under cover, addressed to the "Chairman of the Executive Committee, River Wear Commissioners," at 19, Fawcett-street, Sunderland, not later than NOON on TUESDAY, 4th of OCTOBER, 1864. The Commissioners do not bind themselves to accept the lowest or any Tender—By order,

19, Fawcett-street, Sunderland, September 7th 1864.

GAS TANK and HOLDER.—The Directors of the Gosport Gas and Coke Company are ready to receive separate TENDERS for the CONSTRUCTION of a TANK, and for the MAKING and ERECTION of a GAS HOLDER, at the Company's Works, Lear Gosport. The Tank to be about 75 feet diameter inside, and 20 feet deep. And the Gas Holder to be about 72 feet 6 inches by about 20 feet deep. The drawings and specifications are ready, and may be seen at the Office of the Company on the Works. Tenders to be sent to the Secretary, on or before TUESDAY, the 4th day of OCTOBER next. The Directors do not bind themselves to accept the lowest or any Tender—Dated 14th September, 1864.

HENRY COMPTON, Secretary and Treasurer, Gas Works, Newtown, near Gosport, Hants.

TO BUILDERS and CONTRACTORS.—NEW EXCHANGE BUILDINGS, HULL.—The Directors of the Hull Exchange Company (Limited) are prepared to receive TENDERS for the ERECTION and COMPLETION of their PROPOSED NEW BUILDINGS, in Lowgate and Bowl alley lane, Hull. The plans, specifications, and conditions of contract may be examined, and bill of quantities obtained on payment of one guinea, at the Offices of the Architect, Mr. WILLIAM BOTTERILL, 23, Parliament street, Hull, after TUESDAY, the 20th instant. Sealed Tenders, properly endorsed to be addressed to the Chairman, and delivered at the Temporary Offices of the Company, 22 High street, Hull, on or before WEDNESDAY, the 12th OCTOBER next. The Directors do not pledge themselves to accept the lowest or any Tender.

T. W. FLINT, Chairman.
Hull, 14th September, 1864. W. H. MINES, Secretary.

TO BUILDERS. — Persons desirous of TENDERING for the WORKS required in the ERECTION of a new CHURCH at Pilley, Yorkshire, may inspect the plans at North Bank, Beulah road, Ecclesall, near Sheffield, where bills of quantities may be obtained, from MONDAY, the 19th day of SEPTEMBER, to WEDNESDAY, the 28th inst. Sealed Tenders addressed to the Rev. ARTHUR PETTIT, Pilley Vicarage, Sheffield, will be received at the Vestry Room, Pilley, until FIVE o'clock p.m. on TUESDAY, the 4th day of OCTOBER next. Persons Tendering must give references to accept the lowest or any Tender. No pledge is given that the lowest or any other Tender will be accepted.

BLACKMOOR & MITCHELL-WATHERS, Architects.
Sheffield and Rotherham.

TO BUILDERS.—TENDERS are invited for the ERECTION of a CHAPEL and SCHOOLS at Halstead, Essex. Plans and specifications may be seen at the Vestry of the Old Independent Chapel, on the 20th, 21st, 22nd, and 23rd instant, from 10 till five each day. The Tenders to be sent to Mr. J. ROBERTS, Halstead, in a sealed envelope, marked "Tender for Chapel and Schools," on or before TUESDAY the 4th of OCTOBER next. Two sum Tenders must be given—the one to accept the lowest or any Tender, the other to be required from the contractors for the due performance of the work.

Halstead, Essex, September 8, 1864.

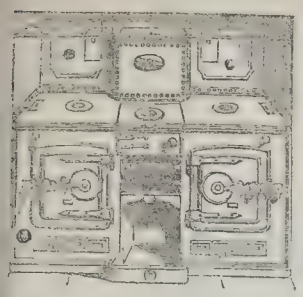
TO BUILDERS.—Persons wishing to give in TENDERS for the ERECTION of SCHOOL and CLASS ROOMS, at the rear of the Independent Chapel at Cupping Gogar, Essex, may see the plans and specifications at the Vestry of the said Chapel, from the 19th to the 24th of SEPTEMBER, and between the hours of TEN a.m. and FIVE p.m. each day. The Tenders to be sent in to the Rev. S. CONWAY, Ongar, on or before MONDAY, the 26th of SEPTEMBER. The Committee do not bind themselves to accept the lowest or any Tender.

TO SEWER CONTRACTORS and OTHERS.—The Local Board of Health for the District of Watford are prepared to receive TENDERS for the CONSTRUCTION of about 1,568 feet of 15-inch PIPE-SEWER, and about 600 feet in length of smaller Pipe sewer, with the necessary ancillary drawings, section of the existing sluice Drain and specifications may be seen, and printed copies of the specification, schedule of prices, and form of Tender, on payment of 5s. to be obtained, at my Office, in Watford, on and after the 17th SEPTEMBER instant; and such Tenders, endorsed "Tenders for Drainage," must be delivered or sent to me on or before the 4th OCTOBER next. The Board do not bind themselves to accept the lowest or any Tender, and reserve to themselves the right of subdividing the contract, and letting separately one or more of the divisions mentioned in the specification.

JOHN SEDGWICK, Clerk to the Local Board.
Watford, September 16, 1864

TO BUILDERS.—CROYDON UNION NEW WORKHOUSE.—The Guardians are desirous of receiving TENDERS for the ERECTION of a New WORKHOUSE at Quadrant road, Croydon. The plans and specification can be inspected, and other particulars obtained, at the Architect, Mr. JOHN BERNEY, at his Office, North-end, Croydon, on and after the 12th of SEPTEMBER next. Copies of the quantities may be obtained of Mr. THOMAS P. BOWMAN, Surveyor, No. 5, Adelaide-place, London Bridge, upon depositing with him the sum of 5l. 5s. which will be returned after the delivery of the Tender received Tenders, addressed to me, and endorsed "Tender for a New Workhouse," to be delivered at my office, as under, on or before MONDAY, the 26th day of SEPTEMBER next. The Guardians do not bind themselves to accept the lowest or any Tender. The Guardians will require the Builder whose Tender is accepted to give the names of two responsible sureties to be jointly bound with himself in the sum of 3,000l. for the due execution of the works.—By order,

ALFRED G. BLAKE, Clerk to the Guardians.
No. 23, George-street, Croydon, August 25, 1864.



TO BUILDERS. LEEDS MECHANICS' INSTITUTION and SCHOOLS of SCIENCE and ART.—CONTRACTS are required for the ERECTION and COMPLETION of the proposed NEW BUILDING for the above INSTITUTION. The plans and specifications may be seen, and bills of quantities obtained, at the Office of the Architect, Mr. W. H. CROSSLAND, New Corn Exchange, Leeds, on and after MONDAY, the 19th day of SEPTEMBER. Tenders to be delivered to the Honorary Secretaries of the Leeds Mechanics' Institution, South Parade, not later than MONDAY, OCTOBER the 3rd. The lowest or any Tender will not necessarily be accepted.—By order,

H. WARDMAN, } Hon. Secs.
W. J. NEILD, }
August 31, 1864.

GRAVEL and HOGGIN, of the best quality and colour from the well-known DAWLEY GRAVEL PITS, near Hayes, Middlesex.

To BUILDERS and ROAD CONTRACTORS
Sifted Stones for roads, unsifted Gravel for concrete, Hoggin for paths, may now be had in any quantity, delivered alongside by the Grand Junction and Regent's Canals.

THOMAS MAYNARD, PROPRIETOR,
Dawley, near Hayes, Middlesex.

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible,—advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

FIRE-PROOF CONSTRUCTION.—

FOX & BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private. The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as ensuring the great desideratum of fire-proof construction, even for ordinary dwellings, houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,

MUSGRAVE'S PATENT STABLE AND HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES. MUSGRAVE'S PATENT IRON COW-STALLS AND PIGGERIES.

Architects who have not seen these Fittings are requested to write for Engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition. They can be seen in first-class stables in almost every county in England, and MUSGRAVE, BROTHERS, are now [illegible] several very large establishments under directions of London Architects, noted for adopting only what is the best of its kind. Particulars of these, as well as MUSGRAVE'S PATENT SLOW-COMBUSTION STOVE, will be forwarded on application to

MUSGRAVE, BROTHERS, ANN STREET IRON WORKS, BELFAST.

THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees, England and Canada,

A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength, and [illegible] convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT SCOTT, 20, Spring Gardens, London."

BROWN & GREEN'S

PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and when fitted with Bath and Steam Apparatus, &c. they form the most complete apparatus for good establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

72—74, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept. 6, 1862.

SUITABLE FOR CHURCHES, CHAPELS, PARSONAGE HOUSES, SCHOOLS, PUBLIC BUILDINGS, OR PRIVATE HOUSES.

THEY CAN BE MADE TO ANY DESIGN.
FULL PARTICULARS AND PRICES ON APPLICATION.
38 and 65, YORK STREET, WESTMINSTER.

J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)

WHOLESALE BUILDERS' IRONMONGERS,

PATENTEES AND PROPRIETORS OF THE

PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE,

which does not require any screws in the necks of the knobs. Perfect action guaranteed in both Locks and Furniture if the Locks are of our own manufacture.

SOLE AGENTS FOR KIMBERLEY'S FLOOR CRAMPS, AND GREEN & JACKSON'S NEW PATENT MORTISING AND TENONING MACHINES.

A large Stock of Nails, Screws, Locks, Latches, Hinges, Pullies, Brass Goods Coffin Furniture, Glue, Bond Hoop, Stoves, Ranges, Rainwater Pipes, Gutters, and Connections. Castings of all kinds, Scaffold-rope, Crab Winches, Screw-jacks, Patent Wrought and Cast Iron Windows, Patent Iron Stable Fittings, either plain, galvanized, or enamelled.

All Goods at the lowest Wholesale Prices. Illustrations and particulars sent upon application.

No. 13, KING-STREET, SNOW-HILL LONDON, E.C.

"By Royal Letters Patent."

ELECTRIC BELLS FOR DOMESTIC USE.

"Indicator" Dial, 2½ in. diameter.

BREGUET'S PATENT INDICATOR SYSTEM, with a Dial which shows when the Bell is ringing, the same as in use at the Grand Hotel, Boulevard des Capucines, Jockey Club, &c. Paris.

The superiority of Electric Bells is already settled in America and in France. For all modern works at Paris they have as effectually superseded the old crank and pull plan as, for travelling, the railway has superseded the antiquated stage-coach.

ADAMS & SON have much pleasure in stating that they have made arrangements with Messrs. Breguet, of Paris, to become their sole Agents for the sale and fixing of their Patented Apparatus upon the "indicator system," which has great advantages over all others, and is especially adapted for hotels, public buildings, and other large establisments. The details of this ingenious instrument, together with a description of the various apparatus in use for Electric Bells, may be had upon application, or by post.

WILLIAM S. ADAMS & SON,
Ironmongers by appointment to the Queen and his Royal Highness the Prince of Wales, and also to the principal London Clubs,
Engineers and Manufacturers, 57, Haymarket, and 14, Norris-street, S.W.
Works—Marlborough-row, Marshall-street, W.

GALVANIZED IRON AND ZINC WORKS.

GALVANIZED OR BLACK SHEET-IRON, CORRUGATED AND PLAIN, ALWAYS ON STOCK.
GAS AND WATER TUBING, GUTTERING AND PIPING, WIRE NETTING, TELEGRAPH AND FENCING WIRE.
EVERY DESCRIPTION OF IRON WORK GALVANIZED.
ESTIMATES GIVEN FOR IRON ROOFS, SHEDS, STORES, &c.

VAVASSEUR & CO.

GALVANIZED IRON AND ZINC WORKS, SUMNER STREET, SOUTHWARK, S.E.

MANTEL PIECES, ENGLISH AND FOREIGN,

IN EVERY VARIETY OF DESIGN AND COST,

Have been added to their LARGE and EXCELLENT ASSORTMENT of FINE FINISHED STOVES, FENDERS, &c. in the NEW SHOW ROOMS of the

GENERAL IRON FOUNDRY COMPANY (LIMITED),

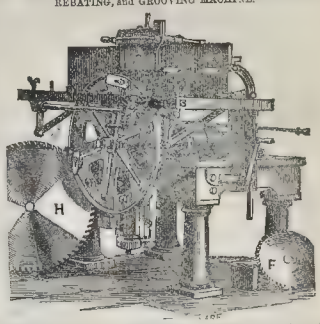
At No. 43, UPPER THAMES-STREET, LONDON.

By an arrangement with Mr. WILLIAM POTTS, of Birmingham, the Company have the exclusive Right of Sale of his ART MANTELS in the London District. These Works are of the HIGHEST EXCELLENCE in DESIGN and FINISH, very beautiful and durable. They also beg to call special attention to the beautiful and varied productions in ART BRONZES and METAL WORK, adapted for ARCHITECTURAL and CABINET DECORATION, MURAL MONUMENTS, &c. now on view in their Rooms. Also to the following Articles of their Manufacture, viz.

PATENT WROUGHT IRON WINDOWS,
Strong, light, durable, easily fixed, cheap, and free from risk of breakage.
BILLING'S PATENT CHIMNEY THROATS AND AIR APPARATUS,
Most effective for the Cure of Smoky Chimneys.
FIRST-CLASS COOKING APPARATUS
For Club Houses, Hotels, Restaurants, &c.

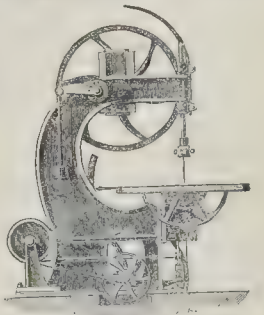
MORTAR-MILLS,
CRABS,
CRANES,
BLOCKS,
JACKS,
&c. &c.

PUMPS
OF ALL
DESCRIPTIONS.



WELL-BORING TOOLS,
IRON PAILS, &c.
OF ALL SIZES.

PORTABLE STEAM-ENGINES FOR HIRE OR SALE.



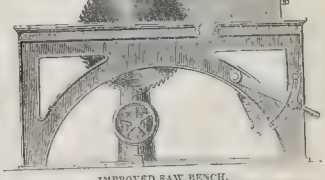
R. RICHARDS & CO. Upper Ground Street, Blackfriars Road.

SKETCHLEY'S

IMPROVED SAWING, PLANING, MORTISING, TENONING, REBATING, and GROOVING MACHINE.

Will do more work, and is cheaper and better than any other yet produced.—Full particulars on application to the Inventor, GREAT GEORGE STREET, WEYMOUTH

IMPROVED BAND SAW MACHINE.



SAMUEL WORSSAM & CO. invite all those who are contemplating the Erection of Sawing Machinery, to apply for a Copy of their New Priced Illustrated Catalogue of BAND SAW MACHINES, just published, which contains Illustrations and Descriptions of a great variety of these machines, adapted for all kinds of work; and also a Price List of Perin's Patent French Band Saw Blades, of which S.W. & Co. are the sole importers.

These Catalogues can be had free, on application at S. W. & Co.'s Works, 305, King's road, Chelsea, S.W.

PRIZE MEDAL, LONDON, 1862.

THOMAS ROBINSON & SON,

SAW-MILL ENGINEERS,
ROCHDALE NEAR MANCHESTER.
London Office, 9, Adam street, Adelphi, W.C.

IMPROVED SAW BENCH,
for Sawing, Tonguing, Grooving, Rebating, and Cross-cutting.

Manufacturers of Sawing, Planing, Moulding, and Wood-working Machinery of every description, suitable for Builders, Contractors, &c.

Steam Engines and Boilers, Shafting, Gearing, &c.

Full sets of Wood-working Machinery to be seen in operation daily at the Works, Rochdale

THE BUILDER'S COMBINED

MACHINE, for Sawing, Mortising, Tenoning, Grooving, Rebating, and Boring. Worked by manual or steam power. Price £24.

J. F. MARRALL, Patentee and Manufacturer, 56, Tabernacle-street, Whitechapel-road, London, E.

TO BUILDERS, PLUMBERS, AND CONTRACTORS.

LEAD MERCHANT, Brass Founder, and Manufacturer of Water Closets, Water-closets fitted with Underhay's Patent Regulator and supply Valve Pumps to deep wells; Pumps on planks; Patent Screw barrel Cocks for high pressure; Engineers' Brass Castings, Railway Axle Brasses, Patent Bearings, and Railway Fittings of every description.

R. F. DALE,
Manufactory and Foundry, 8 and 9, Shoe-lane, Fleet-street, E.C.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT & CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show, every article marked in plain figures. Patentees, and Manufacturers of the Mercurial Gas Regulator. Complete Pattern-book and Price-lists 12s.—Nos. 55 and 56, High Holborn.

CAUTION to ARCHITECTS and BUILDERS.—In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of SMITH'S PATENT DOUBLE-ACTION DOOR SPRINGS,
SMITH'S PATENT WEATHER-TIGHT WATER BAR, and
SMITH'S PATENT WEATHER-TIGHT CASEMENT FASTENING for FRENCH WINDOWS:

The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 89, Princes-street, Leicester-square, London; and SUCH ONLY are WARRANTED.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.

PICTOR & SONS, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

MESSRS. THE FREEMAN AND CHEESEWRING GRANITE COMPANY (LIMITED).

OFFICES: — 13, PRINCESS SQUARE, PLYMOUTH.

Estimates for Granite, Polished, Dressed, or Scappled, will be forwarded on application to the Secretary, 13, Princess-square, Plymouth; Quarries at Penryn, Penzance, and Cheesewring; Steam Polishing Works at Penryn and Cheesewring.

LONDON ORDERS RECEIVED AT 27, MILLBANK STREET, AND 93, CANNON STREET.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator

for admission of Pure Air

THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants, and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union-street, Borough, London

INDIA-RUBBER MILL BANDS,
WASHERS for STEAM JOINTS, HOSE PIPES, and FLEXIBLE TUBING.
A STOCK OF THE ABOVE ALWAYS ON HAND.
JAMES LYNE HANCOCK,
VULCANIZED INDIA-RUBBER WORKS, GOSWELL MEWS, GOSWELL ROAD (opposite Spencer street), LONDON, E.C.

MEDIÆVAL PAPERHANGINGS, from the Thirteenth to the Sixteenth Centuries. Designed by G. T. ROBINSON, F.R.I.B.A. Manufactured by WM. WOOLLAMS & CO. 110, HIGH STREET, near Manchester-square, London, W. May be obtained of the principal Decorators.

Extracts from notices in the undermentioned publications:—

"Conventional leaf patterns, often copied, but great beauty of form, character in the examples sent to us. With a few exceptions, the colouring of the specimens is commendable, in many it is worthy of the highest praise."—*Athenæum*.

"The designs are exceedingly elegant, and the colours good and well arranged. Some of the patterns are of strictly ecclesiastical character, suitable for mission churches and oratories, or they may be used as accessories in church decoration."—*Church Builder*.

"The variety of the patterns are exceedingly satisfactory, and not expensive."—*Builder*.

"These designs are infinitely varied, yet always consistent and effective; the colouring is pre-eminently good, both in the selection of tints, and in harmonious combinations; and the quality of the papers is of the highest order."—*Art Journal*.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Macclesfield street North, City road Basin, N. Study, that the trade term, "TERRO METALLIC," is the exclusive right of the Proprietor; and lastly, that the "Reports of the Juries," page 581, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION
MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.

Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.

Chimney-pots, Billiard-tables, Table-tops, Baths, Wall linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 39 and 40, Upper Belgrave-place, Pimlico, S.W.

NOTICE TO ARCHITECTS AND THE TRADE.

J. DEFRIES & SONS,

GAS ENGINEERS AND MANUFACTURERS OF
CRYSTAL, BRONZED, AND ORMOLU CHANDELIERS, IMPROVED CRYSTAL STAR AND SUN LIGHTS,
FOR LIGHTING AND VENTILATING PUBLIC AND PRIVATE BUILDINGS.
SPECIAL DESIGNS PREPARED in perfect ACCORDANCE WITH Architectural Arrangements.
Estimates furnished FOR THE LIGHTING and Fitting up of Theatres, Music-halls, and Public or Private Buildings with Gas, &c.
WORKS, LONDON and BIRMINGHAM.
MANUFACTORY and CITY SHOW ROOMS, 147, HOUNDSDITCH.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.
ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Which they describe as the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such materials. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862

IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO'S Pattern-book, designed by M. Digby Wyatt, esq. together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthall Works, Broseley, Salop.

May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.

London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

GARDEN WALLS.—FOXLEY'S Patent Corrugated BRICKS are ornamental, cheap, and durable, and the most complete remedy against all the evils attending the present system of framing Fruit Trees. Particulars on application to the Patentee, J. FOXLEY, Stony Stratford, Bucks.—Agents for London, Messrs. EASTWOOD, Lambeth

TARPAULIN COVERS for HIRE (100 in stock); also MARQUEES and TEMPORARY PAVILIONS, for FOUNDATION-STONES, &c. Scaffold Cord and Hemp Rope Falls and Blocks.
FRED. EDGINGTON & CO.
THOMAS-STREET, OLD-KENT-ROAD, LONDON.

KAMPTULICON FLOOR CLOTH. DURABLE, COMFORTABLE, ECONOMICAL, and ORNAMENTAL, for CHURCHES, PUBLIC BUILDINGS, BILLIARD ROOMS, and PRIVATE HOUSES.

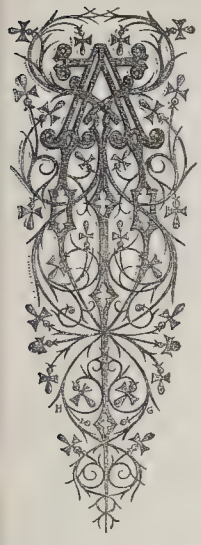
Philip Twells, esq.

OFFICES.—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, Office of International Financial Society, No. 60, Threadneedle-street, E.C.

The Company will make advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security:—

1st. Of landed estates, first-class house-property, and real property of all descriptions and tenures, and of all estates and interest therein.

2nd. Of rates, dues, assessments, and impositions of all descriptions, raised or imposed by or under the authority of any Act of Parliament, public or private, Royal Charter, Commissions of Sewers, Drainage, or other sufficient legal authority on the owners or occupiers of land.



3rd. Of charges and securities of all descriptions upon or affecting landed estate, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private.

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32, Charing-cross, London, S.W.

The Builder.

VOL. XXII.—No. 1128.

*Patent Law in America.**

T a time when our own patent laws are undergoing a wholesome discussion, and when even the total abolition of all protection to inventors, strange to say, is being urged in influential quarters, it might be useful to look into the working of the patent law of the United States as annually recorded in the Reports to Congress. The Report for 1863 is now before us; and although we do not mean to use it with any definite purpose as regards the discussion, we may dip into it here and, there and extract what we can that may interest our readers.

The number of patents, &c., and the receipts and expenses of the office for the year were as under:—

Number of applications made during the year 1863	6,014
" patents granted, including reissues and designs	4,170
" caveats filed during the year	787
" applications for extension of patents	40
" patents extended	48
" patents expired 31st December, 1863	968
Of the patents granted, there were to—	
Citizens of the United States	4,048
Subjects of Great Britain	58
Subjects of French Empire	37
Subjects of other foreign governments	27
	4,170

Statement of Money received during the Year 1863.

	Dollars.
On applications for patents, reissues, &c.	178,617 00
For copies and for recording assignments	16,976 29
	195,593 29

Statement of Expenditures from the Patent Fund.

For salaries	85,559 94
For contingent expenses	42,715 29
For temporary clerks	54,438 41
For withdrawals	1,680 00
For refunding money paid by mistake	720 50
For judges in appeal cases	300 00
	189,414 14

Statement of the Patent Fund.

Amount to the credit of the Patent Fund, January 1, 1863	38,361 15
Amount paid during the year	195,593 29
Total	233,954 44
Deduct amount of expenditures during the year	189,414 14
Leaving to the credit of the Patent Fund, January 1, 1864, the sum of	44,540 30

The number of patents issued in 1843 was 531: in 1853, the number was 958; and in 1863, as we have seen, it was 4,170. During the last twenty years, therefore, the number of patents issued has been greatly and steadily on the increase. The first year on the record is 1837, when there were 435.

The report calls attention to the policy of any system of protection by patents; the advantages of the American system; and the state of the industrial arts as exhibited by the records of the Patent Office.

The feeling on the first question may be deduced from the preliminary remark in the report that, "to most inventors in this country it would seem not less preposterous to question the right of property, or the fundamental laws of morality, than to inquire into the right and policy of granting patents for inventions; but we cannot shut our eyes to the fact, that within the last few years the policy of patent laws has been the subject of grave discussion in Europe." The reporter then enters fully on the evidence before the Committee of the House of Lords, in 1852. In adducing from this evidence illustrations of the beneficial influence of the protection afforded by patents, the report gives similar illustrations of American patents, and especially of one relating to india-rubber, the extensive American manufacture of which was founded upon the stimulus which the patent privilege gave to the inventors, and the protection which the patents have given to the manufacturers. In this case, however, the original inventor of the most important discovery connected with it, that of sulphurization, was not the person who reaped much advantage from it, even though he patented it. The story is thus told:—

"Upon their introduction into market it was found that the goods became clammy and sticky when exposed to heat, and were stiffened by the cold. They were, therefore, useless. In consequence of these defects, in 1839 all the companies and individuals engaged in the manufacture were ruined. The manufacture was utterly prostrated. At this time a simple workman in Connecticut, named Hayward, who had undertaken to carry on this manufacture by himself,—who, to use his own words, hired the shop he worked in, and whose only income from the uncertain profits of his business was about 500 dollars a year, sought, day and night, to discover some substance which might be combined with the india-rubber, and cure its defects. Absorbed in the search of what to him was the philosopher's stone, 'he dreamed at night,' as he asserts, that the desired solvent was sulphur. He combined the rubber with sulphur; and, to his delight, discovered that the defects in the goods were almost wholly overcome. He had miraculously, as it were, discovered a substance which combined chemically with the rubber, making, in fact, a sulphuret of rubber,—indeed, a new substance, whose structure is fibrous, like horn; whereas, the structure of rubber alone is granular, or molecular. He obtained a patent for his discovery; but, being heavily in debt, and, perhaps, unable to conceive of the vast consequences which would result from his invention, he sold the right to his invention, for a mere pittance, to Mr. Goodyear. The latter experimented upon the new compound discovered by Hayward, and discovered the art of vulcanising it."

Other illustrations of extensive manufactures fostered by the American patent law are given, such as the inventions connected with labour-saving agricultural implements and war appliances.

As to the former, the Report states, that in 1860 "a thrashing-machine, in Ohio, worked by three men, with some assistance from the farm hands, did the work of seventy flails; and that thirty steam thrashers only were required to prepare for market the wheat-crop of two counties in Ohio, which would have required the labour of 40,000 men." Whether it be a public or national advantage that 40,000 men should be let loose from agriculture, and plunged into savage warfare, to be slain like bullocks, only without the immediate utility of such a slaughter, is quite another question, and one with which the patent law has little or nothing, necessarily or essentially, to do.

As to war appliances, the Report remarks that just before the commencement of the present war there was throughout the whole North, from no apparent cause, "but, as it seemed, by an inspiration of Providence (!) a revival of military enthusiasm which had slumbered for years." An inspiration of the Devil surely would have been a more fitting expression than one ascribing to the God of mercy and of love the origin of such diabolical proceedings either on the part of the North or of the South. Then follow some flourishes evidently designed for the Federal Congress, introductory to the intimation that "within the last year there have been patented 240 inventions in implements of war." It is so far consolatory, however, to know that during the same year there have been patented 490 inventions of agricultural implements, even although a single implement can let loose upon the South nearly 40,000 men, from two counties alone.

The next section of the Report is titled "Justification of the United States Patent System." It opens with the following remarks as to novelty of inventions:—

"The next question which I propose to discuss is the comparison of our own system of patents with those of the great industrial nations. Our patent system is founded mainly upon the statute of 1836, framed under the advice of the most experienced lawyers of the period, but carried through by the energy and wisdom of a distinguished senator of Maine, Mr. Ruggles, who deserves the grateful acknowledgments of the country for securing the passage of an act which has proved one of the most beneficial in our legislative history. The characteristic feature of our patent policy is the system of examination as to the novelty of inventions conducted by the commissioner of patents through an examining corps, selected for their special accomplishments in the arts which it is their duty to examine. No system of examination like our own exists in Europe, except to a very limited extent. I have before me a synopsis of the patent laws of nearly all the countries in Europe. In Great Britain, France, Austria, Belgium, Spain, the Roman States, Sardinia, and the Sicilies and Saxony, there is no examination as to novelty. In Prussia, Russia, the Netherlands, Hanover, and Bavaria, there is an examination by learned societies and commercial boards, instituted mainly for other purposes; but the whole number of patents granted in the last-named countries in 1858 was only 173; while in the first-named countries, in the same year, there were issued 10,297 patents; so that, considering the number of patents issued, our own peculiar system stands comparatively alone among those of all civilised nations. The system of granting patents in Great Britain without previous examination as to novelty, has led to the granting of a great number of patents for the same thing,—an evil which became so great as to lead to the publication of all the specifications, which only partially remedies the evil."

Another favourable point of comparison of the American with the English policy, continues the Report,—

"Is the cheapness with which patents are obtained in the States, the cost being limited to the amount necessary to create a fund for reimbursing the expenses of the Patent Office, while in Great Britain the cost of obtaining a patent is 175*l.*,—over twenty-two times the cost in this country. The acknowledged object of subjecting patentees to these enormous charges is the prevention of the multiplication of worthless or frivolous patents, and patents for small improvements on valuable inventions, or combinations thereon.

The objections to the frivolity and multiplicity of patents are so often thoughtlessly made, even in this country, as to be worthy of refutation.

The apparent insignificance of an invention is no measure of its value. Inventions in the meanest of household arts, such as improvements in washing and wringing-machines, have not only contributed most materially to domestic comfort, but have given rise to single manufacturing establishments employing over half a million of dollars of capital. Improvements in articles so trivial as hooks and eyes, and pins for infants' clothing, have been the foundation of patents which have produced tens of thousands of dollars.

The application of a *pencil-mark* in submarine blasting, and the explosion of military mines by the electric current, enable the operator to dispense with cumbersome and costly batteries and machinery formerly indispensable. A spring for holding the deflector and chimney upon a coal-oil lamp, consisting simply of a bent strip of brass, has gone into universal use, and through a tariff of a few mills upon each lamp to which the invention is applied, has yielded several hundred thousand dollars to the inventor. The more minutely the arts are studied, the more will the conviction be forced upon the mind that, as the distinction between great and small appears to be unrecognized by Providence, the distinction between important and trivial, and useful and worthless, should never be applied to any original work of human ingenuity."

The Report then enters upon a lengthened review of the progress of the arts in the States, beginning with agriculture. In the division on Civil Engineering (a very brief one) all that the Report says is:—

"Under this classification of inventions may be found improvements in architecture, bridges, canals, dams, wharfs, roads, &c. For the last year the inventions have in this class been confined in a great degree to the use of iron in its various forms and adaptations to building purposes, such as houses, bridges, &c. The very rapid development of iron mines, the improvements in machinery, and the greater durability of iron structures, seem to have awakened the attention of inventors to the more general application of iron in all structures to which it can be applied. A patent for the construction of domes for public buildings has been issued by the office, in which iron is used exclusively, giving them a light and airy appearance, and great strength. This invention has been tested upon one of the largest buildings in St. Louis, Missouri, and the principle applied in the construction of turrets for iron-clad vessels."

There are a few lines more, however, on engineering in the following division,—on Railroad Engineering.

Under the head of Lumber, it is stated that during the year 1863, there were 224 applications for patents diversified among the different machines (such as saw mills) and tools comprising the class.

"With all the rapid strides of improvement in this direction, the old method of sawing lumber by the 'up

* Introductory Report of the Commissioners of Patents for 1863.

and down' saw is becoming less used, and the circular-saw is supplying its place, as a great proportion of the lumber is now cut by means of this saw.

As the forests that have hitherto supplied our wants in timber of the choicest kind begin to fail, invention comes to our aid, and by means of improved sawing-machines now in use, ship timber can be sawed from crooked or curved logs, that, with the old process, could not be made available except by hand-sawing.

Planing-machines have become indispensable in most of the branches of wood-working, and with the best machines now used the mechanic has his lumber given into his hands with only the *smoothing* wanting, it having been wrought to the right size and shape, or may be tongued and grooved, or beaded, or a moulding may be cut thereon more perfect than can be done by hand-tools.

Lathes for wood-turning and working have been much improved, by which we are enabled without additional attention to turn wood in various forms, such as round, oval, nearly square, hexagonal, any number of sides or angles, and to almost any desired pattern, even to irregular forms, and in many lathes this is done nearly automatically. Wagon spokes are formed to shape, with square or round tenons cut upon the ends; screw-threads and spirals are also cut with great facility and exactness; a perfect sphere can be turned without placing the thing to be turned between points or centres at all, so perfect is the machinery now in use for these purposes.

Staves and heading for coopers' work that once required the best of timber, with the straightest grain, are now made from timber regardless of crooks, curves, or twists in the grain, as they are either *sawed* or *cut* from indifferent timber into the desired shape; or if split, the twist in the grain is no objection, as a machine will dress such a stave without loss of timber by reason of the twist.

The improvement in the machines and tools for the working of wood into various forms, and fashioned to the wants of all, is nowhere else to be found in the same state of perfection as in the United States."

On the subject of Glass, Stone, and Clay, it is said that

"Inventions in this class have displayed much ingenuity, although no very important results can be referred to. In the manufacture of glass, one object sought for has been the substitution of machinery for hand labour in polishing, dressing, and ornamenting glass. Improvements in this direction have so far succeeded that several articles, such as globes, vases, goblets, &c., may be operated upon simultaneously by a single workman. Great perfection in the execution of the work has been attained by the use of the new machinery. The most elaborate designs, tracery, or lettering, previously delineated on paper, are reproduced upon the surface of the glass by machine-work. The particular form of the glass is immaterial for the successful operation, the designs being executed with equal facility upon flat, cylindrical, or angular forms.

In machinery for drilling rocks there are improved devices for holding and rotating the drill, and adjusting it in a more or less inclined position. By another device the drill is made to act upon the rock by uniform blows throughout the entire depth of the hole to be drilled, the drill being rotated and fed to its work by automatic machinery."

The last subject considered in the Report is "proposed modifications." On this subject the Reporter is very brief: "No laws materially affecting our present system are expedient," he says; and the only modification he recommends is a minor one as to forfeiture of patents for non-payment of fees.

In conclusion the Reporter says:

"I am impelled to present in prominent relief the important fact that, although the country has been engaged in a war which would have seemed to tax to the utmost all its energies, the applications for patents for the last year have been equalled in only two former years; and yet one-half of our territory, shrouded in the cloud of rebellion, has contributed nothing to invention or human improvement."

Together with these annual reports to Congress two very useful yearly volumes are printed, one containing specifications of the various patents, and the other consisting wholly of engraved illustrations of them.

LONDON ARCHITECTURE, AND THE CITY.

SOME few years ago, in the most prominent position in our pages, when giving attention to the features of important buildings then recently erected near the Bank and the Royal Exchange, we registered an appreciation of the architecture in that quarter of the City, more favourable than we are able generally to express concerning street-architecture in London. The fact was, we recognized, as others may have since, contrast that was great and suggestive, as between one portion of a metropolis and the rest, and between the art-produce, on the one hand, from the expenditure on particular classes of buildings by companies and by persons engaged in monetary transactions and commerce, and that, on the other, from outlay by Government and by private individuals on other kinds of buildings, and in parts of London not within the locality which we have specified. Since the date of that appreciation of the architectural movement in the City, the number of structures which evince effort after art has been increased; and we have from time to time given illustrations of some of these new works, and mentioned others. But, the period has again arrived for a review of the position of architecture in London, reinforced as it has become, by the fresh contingents of strength. The movement, in the City, still continues; indeed, now whilst we write, preparations are made for an amount of building which would seem very great, compared even with what has been done in each of the last few years. Many gaps are to be seen in the sides of the principal streets; and scaffolding and materials are in possession of courts, and of so much of footpaths and passage-ways as the watchful authorities will permit to be temporarily appropriated, and that is sometimes of all the space over the height required for passengers. Certain streets, as for example Clement's-lane, which leads from Lombard-street to King William-street, are in a state which reminds us rather of the demolitions in Paris, than of anything we have ever before seen in this metropolis. Of the street named, nearly the whole of the eastern side is down, or being pulled down.

The works now in hand, in the City, however, do not extend to a modification of the plan of the streets, otherwise than may be the case at the Cannon-street Station of the Charing-Cross and London Bridge Railway, and in the line of the London, Chatham, and Dover Railway parallel with Bridge-street and Farringdon-street, and in that of the extension of the Metropolitan Railway eastward to Tower-hill. The street-improvements about to be commenced, include those in connexion with the crossing of the Holborn Valley, and those with the street from the Thames Embankment to the Mansion House. The line of the railway through the City, to join with the extension of the Metropolitan, is, we suppose, still intended to be generally or entirely underground.

As shown in our article to which we have referred, it is very important in any treatment of the subject, architecture of the City, to note that the streets in which are the chief works, remain as they have been, that is to say, both in width and in line on plan, most unfavourable to any effort after good architecture, and in fact in many instances destructive of success. But, whatever be our regret that the pulling-down and rebuilding is not accompanied by certain improvements that might serve the art-result, and the other objects of street-communication which should be especially appreciated in the City of London,—and whilst we see that those improvements are rendered more difficult by every fresh building operation,—we are able to note the importance, if not merit, of the buildings themselves, in the architectural art-work of our time.

In Lombard-street there are as many as three buildings of great size, just now in hand; and others have been very recently completed. Each of these works is characterised by elaborate decoration, not merely of mouldings and columns, but of carved ornament in consoles and other portions of the doors and windows, and in string-courses and cornices. Not only in Lombard-street, but in Broad-street, Bishopsgate-street, Gracechurch-street, Leadenhall-street, and Cornhill; Fenchurch-street, Mincing-lane, and Eastcheap; the Poultry and Cheapside, and in more streets than we can here name, buildings are in progress, or have been lately finished. The region of the Bank and the Exchange, however, seems to be the chief location of the art-work; but that of Mincing-lane is not unimportant, so far as the fact of effort is the thing to be acknowledged. In Ludgate-hill there are some recently completed works; and the girders of the railway-bridge already span the thoroughfare: the pulling-down of the greater number of the houses on the east side of Bridge-street, and the construction of the railway-station, have made a striking alteration in the appearance there; and at the western end of Fleet-street, after a long gap, the effort after art in architecture recommences, with varying success, and turns up Chancery-lane, which narrow route is still receiving additions to its buildings of noteworthy character.

Whilst this art-movement is to be seen in the building-work in the City, it is certainly not so easily discoverable in the area of London round-about. Indeed, looking at the general architecture of the streets, at the houses in which even the possessors of wealth are content to reside, and at the majority of those which are built in the environs, it is sometimes difficult to avoid thinking that true art-architecture is retrograding. Such features as dressings to windows, and others, have become common; and if the circumstance be taken to show that there is demand for decoration, it may be deemed evidence of progress. But the buildings that are really designed, and in which the features intended to be decorative, and capable of being so, are proportioned to their situations, and are decorative, are few in comparison with the amount of building; the builder, and his assistant the cement-man, still control the work; the artist-hand governs the lines and forms in but few cases. Even where architects are engaged, their works are now characterized by so many different manners of design, that the public capacity for appreciating any art which there may be in the works, is not equal to the need: the pleasure from that appreciation is not realized; the end or aim of the *art* is not attained. But, in many cases where features are in the greatest number, there is not really any art-work: there is at best, only clever imitation. The strong doses of colour, of ornament that is merely elaborate in carving, of forms that are only novel and various, and of styles and systems of design that are totally different from one another for buildings which are of one description of use and of the same locality of site,—whilst all are of nineteenth century date,—are doing much to injure the public taste, and to weaken the power of perception of the thing which should be esteemed of greatest value in work of the time, namely the art in that work.

The smoke-nuisance, so often dwelt upon in these pages, and which we cannot discover to be at all diminished since the legislation, is operating most disadvantageously for art in architecture, and in many more ways than we have indicated. Indeed, what surprises us most of all as to the exceptional quarter of London to which we have above directed special attention,—and there, what gives us almost the only hope of future progress,—is that there should be a desire for architectural decoration, whilst the evidence stares in the face, that the work elaborated and offered to public notice must under the existing state of things be passed by, after the expiration of about five or six years, scarcely noticed at all. In the City for example,—unless to the architect who happens to look, and will take trouble to pick up the details in his observation, and to realize in his mind's eye the effect of buildings as when erected,—as much, almost every year, is lost by the smoke-nuisance, as is for the time gained by the efforts after architecture. As in some other things, so in building, there is enough spent every year in this country to attain the object twice over. To look at the amount of decorative carving, the proportion of which seems to be increasing every year, one would think there could be no need for us now to put forth the doctrine of the usefulness of the beautiful, that is, that every work designed to serve a purpose, utilitarian in the commonly-received sense, should equally be from the first designed to gratify the sense of perception of the beautiful also. Supposing the carving to be generally of high-art character, which unfortunately it is not, what a waste of labour and cost does there not seem to be in providing it for the duration of effect of only some very few years? The same deterioration is undergone in the case of mouldings, indeed of everything that can be blackened. Glazed and polished surfaces alone retain their original appearance: thus, by contrasting, they make the later effect of the building, as compared with the original effect, worse than it would have been if evenly discoloured, or at least make it further removed from what was the design of the architect. But where coloured materials are used, and not glazed or polished, no architect can satisfy himself exactly on what principle he should design. He may follow the present, and we fear most pernicious, fashion of strong colours, saying that the smoke of two or three years will tone them down: or he may make colour subordinate and a pleasing variation, instead of dominant over form; in which case, that part of his design which was expressed through the element colour, will after similar interval of time disappear altogether. In short, as we have before this, and very lately, observed, the theories once so prominently advanced, and still generally received, as to coloured materials in architecture, and which were specially advanced with reference to the architecture of towns, must be considered as by no means justified in and by

experience. It is true that there is means of renovating the appearance of a brick-building; but the work is expensive: thus it is not to be done so often as mere decorative effect would require. Now, there is a means of economically cleansing the fronts of stone buildings, used in the case of the Bank; and which has been more than once applied to the Mansion House,—the last occasion being prior to the entrance into London of the Princess Alexandra, when it was also used for the portico of the Royal Exchange. Of course, we mean by the fire-engine. We pointedly adverted to the method at the time,—when the success of the operation was complete; and we had spoken of it often before. Why the method is not in use for other buildings, as the Sun Fire Office,—the beautiful detail of which is so obscured that it contributes nothing to the effect,—and why not much more frequently for the Mansion House and the Exchange, it is beyond our power to discover, more than why it is not tried for St. Paul's Cathedral. The first sight of this latter building from any of the surrounding streets, by a stranger to London, or by any one arriving after a long absence, produces so much disgust as to interfere with the appreciation of the art that there is. Even though the observer be an architect, some part of the impression is retarded; and whatever would be put together to make the impression in the mind's eye, is fought with by that which is in actual sight. It has been argued, reasonably enough, that one of the attributes of a successful work of architecture should be the power of striking the observer at once, and at first sight. If so, we place our buildings under such conditions, either that the power is lost by the work, in half a dozen years, or that the effect is totally opposed to that which the designer intended.

The use of cement that requires colouring, or painting, has added to the evil referred to, as it has otherwise operated disadvantageously upon architectural effect. Even when all the houses of a row are painted at the same time, the result is that the whole is either shiny or of one colour and tone, instead of the reverse, or of many hues. The same reason, whatever it may be, which leads to the preference for flatted work in house-painting, apart from the question of durability, leads to that in favour of a general dead surface in external architecture; where polish or glaze is to be used only for contrast, and with due consideration of the permanence of the relation of the two forces. As to the practice of painting the different houses in a row with cemented fronts, not at the same time, whereby a pilaster is constantly to be seen divided down the middle, so much has been said of it, that the practice should long ago have come to an end by arrangement between adjoining owners. But, that practice continues, even where leases are said to contain clauses to ensure the simultaneous painting or colouring. We have not, however, now to speak of these results of the use of cement; possibly they are inevitable from the material, and from the system of combining what are really distinct houses together in one design. The matter is referred to here, only to show how much a mere depth of shade, or blackness, will prevail over and extinguish the effect sought to be produced by the forms and mouldings first designed. Two or three illustrations of this occur to us. The front of the buildings, on the western side of Trafalgar-square, belonging to the Union Club and the College of Physicians, was designed as one composition. Yet it is scarcely recognizable as such, without examination; and, consequently, there is not the impression at first sight, which has been alluded to as one required of good architecture, or that calculated upon. The last-named building is of stone, and the other is cemented; and the inevitable contrast is kept more glaring by the never-cleansing the latter building, and the periodic and somewhat costly painting of the former. Again, in the Strand, the front of Exeter Hall, and the buildings for some distance on each side of it, were originally designed as one composition. Besides the continuity of cornice-lines, there are breaks in the fronts of the houses on the one side, symmetrical with those on the other side of the entrance to the Hall. But owing to the equal blackness of the stone centre, and a portion of the cemented work on one side, and to the recent colouring of the other work, part of one side groups with the Hall, instead of the whole of both sides with it. The edge of the black occurs not where the break is; and it is curious to note that this break, which was of the essence of the design, has become undiscoverable without searching for it: its little line of shadow is lost by the overpowering contrast of the blackness elsewhere. The Royal Arcade, in New Oxford-street, when we last saw it, afforded illustration of all the defects of cementitious architecture that have been referred to. The composition includes eleven arches; and over the piers, or in the second story, are niches; whilst in the third story, over each niche, is a panel with the Royal arms. The entire front was divided into six different shades, from newly-painted cream-colour to dirty black; and each niche and panel was divided into two halves, as well as each pier and spandrel. The best-designed composition in the world could not stand against that sort of destructive treatment. It were much to be desired that delineators of Views in London, would give these things as they really appear. Eaton-square would afford a fitting subject.

Even where stone is used, the effects which result from smoke-nuisance are not confined to the general blackening, and production of a sombre appearance opposed to life in architectural effect, and to the intended expression by shaded parts and shadows. In the front of the Alliance Fire Office in Bartholomew-lane, lines of black and white, caused by soot, and rain divided into streams by the water-leaf ornament, are marked on the facia below, so as to give the appearance of bad, or painted imitation of, fluting. In the country, beyond the influence of town-smoke, buildings receive new beauty by time and weather; in London, the work of the architect is merely distorted, when it is not blotted out altogether. Even to the limit of the suburbs, or wherever coal is burnt, the fuel is alike wasted, and to the destruction of some of the calculated effect of architecture. And, of the northern and midland manufacturing towns, what shall we say? Building, or architecture, is no longer "*decori urbium*," but is the medium for exciting disgust, or melancholy, and of warring against the healthful emotions which are excited by natural scenery, and against the imagination, which affords the greatest sense of delight.

So much of the evil in one direction, as may be connected with the use of cement, is not lessening, but increasing. Portland cement seems to be of all materials, the worst for a smoke-laden atmosphere. Witness the repulsive appearance of Victoria-street; and even of the new Palace Hotel (excellent in its details, were they only stone), and some of the other buildings near to Buckingham Palace.

Thus from many causes, there is constantly being thrown away, much material which might be that of good architecture, and much effort on the part of architects. For this waste, cement and the smoke-nuisance are greatly chargeable. Cement is extending in use on many estates, as the Bedford, in a manner which there is reason to regret. Introduction of decorative mouldings and dressings is no set-off to the positive gloomy appearance, ultimately, of these cement fronts as compared even with grey-stock brickwork. Harley-street, Baker-street, and Gower-street, have been the favourite examples of hideousness, with hasty talkers; but really we prefer the old material to the new, the dingy but somewhat varied gray to the absolute black, or even tone at which the Portland cement arrives,—and no dressings, and the no result on perception of beauty, to the ready-made bad dressings, and the active operation upon the public, of a deteriorating agency.

Briefly, concerning cement, even supposed used not imitative of stone, and leaving unconsidered the question whether it leads to bad brickwork, the case is that it induces a system of the application of ready-made patterns in lieu of design, and thus helps to vitiate the public sense of proportion and fitness, and to induce disgust for the very features of old works which should be ever the most beautiful; that it is not susceptible of the weather-stains which are so valuable as variation to the effect from the right lines of architecture where stone is used; and that for smoky towns, painting only adds to the disadvantages of it which have been named, whilst clogging up all hollows and rounding off all arrises; whilst left to become black, its effect is worse after the same time, than that of stone. Concerning the smoke-nuisance, it conceals objects in nature, upon the effect of which that of architecture depends, as does even architecture in towns,—as upon the effect of sky and clouds, as well as upon that of foliage, in the same field of view, or held in recollection: it clogs up portions of the work which were calculated to have a certain force; and it so blackens the whole as to interfere with the relief of parts by shadows, and to induce disgust or melancholy, rather than to attract attention and to cause delight; it converts the very air-space between spectator and object, into a medium through which much of any beauty that may be in the work, cannot be seen; and by the deprivation of natural beauty, and the mental depression, the power to produce art, and that to appreciate it, are each injuriously affected. Thus we can have no hope that the practice or the appreciation of architecture will respond to exertions, so long as the nuisance continues; and we might go on to find that the vice of drunkenness in our towns had some connexion with the feeling or state that the appearance of these places incites, and that the aptitude of the French in art was not uninfluenced by the clearness of their atmosphere. Till the nuisance be abated, it scarcely seems that the architect is fair with the public in inducing even such expenditure as there is at present upon decoration. In Paris, where every quarter of an inch projection pencils its defined shadow, and where buildings of the time of Louis XV. are less darkened by smoke than those which have had a six years' life in London, he may reasonably claim his position; and in fact, his art *is* appreciated, whilst his own claim is allowed.

In spite of the disadvantages however, in London, and by what we must regard as an anomaly, art is putting in an appearance, and progressingly, in the building-work of the City. Some of the causes of this, or of the amount of the work, may be discovered. There is no doubt of the present prosperity of the British dominions; and in the area which is within the radius of half-a-mile, or even a quarter of a mile, from the Royal Exchange, are concentrated transactions of every part of the world. The concentration is illustrated by the necessity which lately arose for some regulation of traffic, and by the fact that railway companies have now seen fit to encounter the enormous cost of land anywhere in the City, in order to get to the skirts of the little area in question. The last few years have been remarkable for the number of the companies established. Banks, insurance companies, associations, and agencies of all kinds, have needed, and still need, premises in the City; so that, now, one company promises itself large returns by the business of building and letting offices. Any company wanting only a ground-floor, and able to obtain ground, can always calculate upon letting the floors above in a building. The ground is much of it freehold; and it is the purchasers or owners of freehold ground, mostly, who are giving to the City its now marked and distinctive character. In the search for causes to which to attribute the short-coming of architecture in London, the leasehold system has turned up often; and many have considered it quite sufficient in itself to account for any prevalence of bad art, and bad building. Though the cost of such decoration as is now indulged in is considerable, the great cost of ground makes the per-centage come out but small; and a City banking-house at least may calculate upon surviving what would have been the term of an ordinary London lease. Some sort of architectural effect may be advantageous commercially, by attracting attention; and in the case of a bank, a particular sort can help the impression of stability of the concern.

Emulation will help to keep up the movement in the future, as it has a similar one in several of the northern towns; where it happens that the case as to the manner in which ground is held, is much the same as that of the City portion of London; at least, leases for very short terms are not common.

There is one slight deduction to be made, speaking of the favourable conditions for our art in the City: some of the undertakings that become possessed of premises, are not permanent, or vacate them. The change of occupancy destroys the allusiveness of sculpture and emblems. Thus the building originally erected for the Hall of Commerce, in Threadneedle-street, is now the Bank of London; and the frieze, by Watson, is not exactly in place, as it was. The character of some other buildings has suffered by alterations required by increase of business.

The circumstance most unfavourable to the realisation and effect of good architecture in the City of London, however, is the confined

space. It is in the streets which are the narrowest, as Lombard-street, and even in courts, that the premises which are being converted into elaborate architecture, are found. This fact, and the probability now increased that these particular streets will not be widened, would seem to point to particular treatment of the architecture. Those conditions, however, have not been made to rule the compositions; and the result is, that some of the buildings, designed in a manner suitable for streets of four times the width, are less effective than they might have been made: part of their decoration, indeed, is to be considered as thrown away. Both the nature of the site and that of the occupancy, should dictate in such cases the decoration of the ground-story as principal, rather than that of the floor above. The system induced by precedent, and reflected in the common London house, may be right enough there, where the whole height of the front could be compassed in the observation, the head remaining fixed; but where the street is narrow, and the building lofty, the impossibility which there is of correctly representing the latter by a perspective view as it is seen, should be held to infer the need of special principles of design. Bold projections of features such as balconies, in narrow streets, must conceal features which are above them; and a cornice of great projection, helps to darken the street.

A peculiarity of site in the City, that is more difficult to get over, is that of the deviation from right lines in such streets as Lombard-street, where not an inch of ground is to be sacrificed. Where the line of frontage for only part of the length of the building, sweeps round, and with no regular curve, the case would seem hopeless; and we know not what architect is competent to overcome such a difficulty.

Then, the architect, with work in the City, has more than any other the difficulty of "ancient lights." The law of this question can be understood by nobody.

With the impediments of various kinds, and the time absorbed in meeting this person's surveyor, and that, and in seeing what can be done with the public authorities, it is almost surprising that the result ever is of the nature of art. But, if there were not art, there is, it must be allowed, in these buildings in the City, much of the material which should be the vehicle for it. Stone, not cement, is the material employed, with the addition often of marbles and granites; and as we have said, buildings, instead of being remarkable for the absence of architectural members, are becoming so for the opposite quality of elaboration in mouldings and ornament. In a future number we may speak in detail, of some of the chief of the recent works.

WINDSOR.

THE enamel mosaic work by Dr. Salviati in the vaulted roof of the Royal Tomb House at the east end of St. George's Chapel, is now completed, and produces a very satisfactory effect. This tomb-house was erected by King Henry VII., who intended it, in the first instance, for his own burial-place, but afterwards changed his mind, and preferred Westminster Abbey. Henry VIII. gave it to Wolsey, who began a never-completed monument in it for himself, which, during civil war, was knocked to pieces, and remained in that state, until in after time the sarcophagus was taken to St. Paul's, to form part of the tomb of Nelson. In the time of James II. the tomb-house was decorated by Verrio, and again defaced; and in the reign of George III. other decorators gave it adornment. The works now going on in it are, as our readers know, at the cost of the Royal sons and daughters of Albert the Good, and in honour of their illustrious father. At the beginning of the year we gave some particulars of the mosaic work in the vaulting then in progress, but part of that account, now that the ceiling is finished, it may be well to repeat. The roof is groined, and the spaces between the groins are filled with enamel-mosaic pictures, on gold-enamel ground. Each long panel has a half-length figure of an angel whose head is surrounded by a gold nimbus, and beneath and above every figure, there are ornaments representing foliage and clouds. The other panels along the centre of the ceiling contain the Prince Consort's crests, with the motto "*Treu und fest*," his initial, medallions, devices, and other ornaments. The roof is divided into two parts: the first we may call the *secular* or *heraldic* part, and the second (at the east end of the chapel) the *sacred*. In the whole there are 92 angels. The 64 angels of the first portion are holding shields bearing the arms of the Prince Consort and his family, and the other 28 angels of the second part hold shields with the various emblems of Our Lord's Passion. At first sight the work has a *dusty* aspect, but this wears off on examination: the foliage especially is very effective, and the whole is rich without being garish. It has occupied a little more than a year, dating from the day the first cartoons were delivered to the mosaicist,—a very short time for such a work. When the windows are filled with stained glass, the walls covered with other mosaic work and marbles, and the floor with tiles or vari-coloured marbles, as will be the case, it will form a splendid apartment and worthy memorial. We shall be glad to find on the walls less uniformity of mild expression than is apparent in the vaulting-work; some interesting story to unravel, or some powerful head to rivet attention. Much of the gold enamel is very good: that with a green tint is, as it seems to us, to be avoided, not striven for. We hail with gratification the re-introduction of enamel mosaics into England, and look to see much advantage follow it.* The lower part of the chapel walls, that below the cills of the windows, will be encrusted with incised vari-coloured marbles by another artist.

Within the Castle, men are at work under the direction of Mr. Turnbull, improving its appearance bit by bit. They are at present on the staircase, removing the stone-colour paint with which the oak roof is covered, preparatory to a more fitting decoration. The staircase, as well as other parts of the interior of the Castle, greatly needs colour. The Grand Dining-room, formerly called the Waterloo Chamber, decorated not long ago by Mr. Crace, under the special supervision of the lamented Prince Consort, shows strikingly what improvement might be thus gained. There is no denying the fact, that much of the interior is wholly unworthy of our Sovereign.

Our correspondent, Mr. Cunningham, will be glad to be told that his fear, expressed in our last issue, that not one of the rooms "of the Verrio finish" has been spared, is premature. The ceiling of the Audience Room still shows Verrio's representation of Queen Catherine of Braganza, as Britannia, attended by the goddesses to the Temple of Virtue; and the ceiling of the Presence Chamber is covered with another of the Seignior's works, for which he received in 1678, according to contract and agreement thereof made, the sum of 200*l*. How long these two out of many will remain where they are, we will not pretend to say, for the wood-work to which they are indissolubly attached, beyond divorce-court power, is said to be in a very bad state, so that ingenuity will one day be taxed to maintain them in their places. In some of the rooms whence Verrio's "saints" were torn, their loss is not compensated for by the inanities of Wyattville. Sir Jeffrey seems to have determined that nothing by any one else should remain in the modernized castle; it was to be all Wyattville; and, unfortunately, he was able to carry out this desire very completely. Who shall now tell what then found its way from Windsor to Wardour-street? How much more interesting would the pile have been had he contrived to leave in it the handwriting of the various centuries, beginning with the time of William the Conqueror, during which the Castle has been the scene of stirring events and the residence of our kings and queens, and other powerful people. Nevertheless, we must give him credit, remembering especially the period at which the work was done, for the way in which he preserved the grand external features of the Mediæval fortress. Seen from a distance the effect is glorious.

A hundred and fifty years ago Swift wrote,—"Windsor is a delicious situation, but the town is scoundrel." It has been improved since then, though still unsatisfactory, and we would confine the epithet to the hotels there, the owners whereof, with a blind fatuity, persist in making charges the report of which leads many visitors to return dinnerless to town rather than subject themselves to imposition. A sensible little company, "limited," who will open a convenient (not costly) building there, and charge moderately for the best things, will realize a good per-centage.

* The same mosaicist has in hand a ceiling for the Royal Mausoleum at Frogmore, and some mosaic work to be placed in a recess over the chancel arch in All Saints' Church, Windsor.

WOLVERTON AND CALVERTON.

THERE is considerable movement evident in these places, mainly, as it would seem, from the energetic working of the vicar, the Rev. W. P. Trevelyan, his clergy, and two or three of the parishioners. At Wolverton, where large bodies of men in the employ of the North-Western Railway are congregated, an "Institution," with large hall for lectures and concerts has been built, at the cost of about 2,200*l*. It is in connexion with the Government Department of Art, but at present art is not fully attended to. The building, erected from the designs of Mr. Street, is of red brick and stone, and has a more satisfactory appearance seen close than it has at a distance, when the roof, which is ugly, comes into view.

Internally the brick walls are left without plaster or colour, and have a comfortless aspect; at any rate, in wet weather. The same architect has been more successful in a new church hard by,—a very agreeable structure, with the tower yet to finish, and arrangement for the addition of a north aisle when needed. Near to the church some good schools have been built. A lodging-house for men, near to the station, with general kitchen, reading-room, and so forth, is well filled.

At Wolverton end, where it adjoins Calverton, a new church was consecrated a few weeks ago,—St. Mary's. Mr. Scott designed it, and Mr. Aveline built it, entirely at the cost of Mr. Trevelyan, and Miss Perceval, a power in the neighbourhood, and daughter of the late Rector of Calverton. The larger portion of the site was given by the Radcliffe trustees. The chapel, in style First Pointed, consists of nave and chancel (under the same roof) with apsidal termination; and bell gable, containing two bells, at the junction of nave and chancel. It is seated throughout with oak benches of simple design, accommodating 150 worshippers; and is paved with tiles, plain red and black in the nave, figured encaustic in the chancel, increasing in richness eastwards; the step of the foot-pace on which the altar stands being of polished marble. On the north side is the credence, and on the south the sedile. The roof of the chancel is stencilled between the rafters with different-coloured devices, and the wall of the sacrarium as high as the string-course is diapered in colours in incised stucco, the prevailing ornament being the *fleur-de-lys*. The prayers are said from one of the chancel-seats, and the lessons read from an oak lectern. The five lancet windows in the apse, are dedicated by Miss Perceval to the memory of her parents. In the nave there is another stained glass window from the Hon. Mrs. Perceval, a memorial of a daughter who died in infancy. The reredos, an offering from the clergy of the deanery, is of Caen stone. The pulpit, of Caen stone, stands at the north-east angle of the nave, and, together with the font, also of Caen stone, was the gift of the Rev. R. N. Russell, rural dean. The small window at the west end was given by the Rev. T. R. J. Laugharne, the energetic and excellent curate of Calverton, who deserves a larger sphere. The altar-cloth was worked by Miss Perceval, the cushion for the sedile by Mrs. Laugharne. Close to the chapel is a house for a curate, towards the endowment for whose support Miss Perceval gives 500*l*. Adjoining is a small schoolroom; but larger schools will be necessary.

The seats in the church are free, and open for the use of all parishioners. A collection is made, in *bags*, after each service, to defray necessary expenses for the due celebration of divine service, and the maintenance of the chapel.

THE RAILWAY BRIDGE AT BLACKFRIARS.—On Tuesday evening last an engine, with a long train of carriages attached to it, and weighted for the occasion, steamed from out of the London, Chatham, and Dover Railway station in Blackfriars-road, half-way across the new bridge towards the northern side. It is expected that another month will elapse before the whole of the way of the bridge will be ready for examination by the Government inspector, and the passenger station, to be called the "Ludgate Station," now building in Bridge-street, Blackfriars, will be ready for the public accommodation. On the same day mentioned above one of the workmen, whilst engaged under the arches for the railway bridge, fell over into the Thames, and notwithstanding all assistance from a Citizen steamboat, the poor fellow was drowned.

A RUN TO THE LAKES: KESWICK.*

THE picturesque little town of Keswick has been justly considered at once the centre and the metropolis of the English Lakes. From this point the surrounding regions are most conveniently studied. Skiddaw lies in close proximity; Scawfell and Helvellyn within easy access. Romantic valleys and mountain passes, secluded dales and deep glens, abound everywhere in the neighbourhood. A richly diversified landscape of mingled woodland and pasture is seen all around the slopes of the neighbouring hills. In the valley below lies Derwentwater, the Queen of the English Lakes: its silver water studded with green islands; and its verdant banks adorned with luxuriant foliage. It is not without reason that the poet pronounced the vale of Keswick the Elysium of the North.†

Of its early history we have almost nothing to relate. Very little can be gathered from the public records. At the period of the Roman invasion, it was probably a rude collection of British *burghs*; as it might, with equal probability, have been the seat of some early lacustrine dwellings. The progress of civilization, the mixture of races, and the gradual extension of intercourse, have done much to obliterate its aboriginal character. But a large admixture of Celtic blood is still discernible throughout the district; and it is singularly remarkable, but it is clearly established, that in Bassenthwaite and Borrowdale there are numbers of pastoral farms which are owned by the farmers themselves who can trace their lineage and their title back to the Norman Conquest. The prevalence of the ancient British language in its topographical nomenclature clearly supports the English chroniclers in their statement, that it was a place of refuge for the unsubdued Britons retiring before the Saxon and Danish invaders; and there, it is supposed, they continued. The Norman Conquest exercised very little influence on the character of the people. The contest of the great barons with the Crown, the wars of the Roses, the civil wars, the restoration, the revolution; all these convulsions produced scarcely a ripple on the surface of the lakes. It is not until we come to the year 1715 when James, the third Earl of Derwentwater, was attainted for rebellion and beheaded on Tower-hill, that we find a noticeable incident in the local history; and with this incident the history culminates. The Derwentwater estates were forfeited to the Crown, and applied to the support of Greenwich Hospital, from which they were purchased during the period of Sir James Graham's administration at the Admiralty, by the Marshalls, of Leeds, the eminent manufacturers, about-five-and twenty years ago. The fate of the gallant and chivalrous Derwentwater is a theme which poets may seldom meet with. Yet none of the Lakers, as far as we remember, have sung his *requiem* or mourned his untimely end.

Camden found Keswick inhabited by miners. Leland before him described it as "A little poor market town called Keswike, a mile from St. Herbert's Isle that Bede speaketh of." The saint referred to is one immortal in story from the circumstance of having constantly prayed that he might not survive his patron, St. Cuthbert. His prayers, we are told, were literally answered; for both these holy men died on the same day! The few records we possess of population seem to fluctuate considerably: agues and fevers, of a character now happily extinct, arising from its proximity to the swamps and undrained marsh lands, periodically carried off a large number of the inhabitants. The registers of Crosthwaite Church show that the number of interments for the year 1623 amounted to 258, probably a tenth part of the whole population of the parish at that period. Hutchison, the antiquary, writing in 1790, describes the town as it then existed in anything but flattering terms. Most of the houses, he said, were low and meanly built. The best part of the town was obstructed by gloomy and ugly shambles; and there was little appearance of trade or manufactures, excepting some coarse woollen goods and some linen. A cotton-mill had been lately erected on the river Greta. The town, he adds, has a considerable weekly market, in which is exposed to sale a variety of fresh-water fish—salmon, pike, eels, and trout; and also the finest mutton in the island of Great Britain.*

The parish of Crosthwaite,† which comprehends the township of Keswick, possesses a fine old church, beautifully situate in the centre of the vale of Keswick, about half a mile from the town. There is no record to show the date of its erection. The building consists of a nave, north and south aisles, chancel, tower, and porch. Externally the walls are rough cast, with the exception of the tower; and its interior has been handsomely restored by Mr. Gilbert Scott, at an expense of 4,500*l.*, nearly all contributed by a private gentleman in the neighbourhood, Mr. James Stanger, of Lairthwaite. In the chancel we saw an antique monument of the Ratcliffe family of Derwentwater, with an inscription in bronze admirably preserved; and right in front of the principal doorway reposes, in solemn grandeur, the magnificent recumbent statue, in white marble, of the poet Southey.

> "His joys, his griefs, have vanish'd like a cloud,
> From Skiddaw's top."‡

As for the town itself, it is rather irregularly built, consisting of one principal street, with a number of smaller streets intersected by lanes, enclosed courts, yards, and narrow passages. Most of the houses are built with the clay slate rubble of the district, and many are rough-cast and limewashed on the outside. The plan of the town, as seen in a bird's-eye view from any of the surrounding hills, somewhat resembles the three-legged figure on a Manx penny. The public buildings are small and unimportant. The town-hall is an ugly black rubble building, erected in 1813, of the Scotch Presbyterian Church type; St. John's Church, erected and endowed by the lord of the manor, Mr. Marshall, is a rather neat Early English structure, built of a light pink freestone ashlar, from the quarry near Greystoke; and the Cumberland Union Bank, which is the only other building worth mentioning, is a handsome square block, built of Borrowdale greenstone, with tasteful quoins, string-courses, window-openings, and door-posts of white sandstone, from Cockermouth. In the town-hall is exhibited Mr. Flintoff's elaborate model of the Lake district, which we strongly recommend to the study of all visitors who wish to master the topography of the country; and in Crosthwaite's Museum there is a perfect mine of mineral wealth and antiquarian relics peculiar to the district. One Roman sword and one cinary urn we saw were in a state of perfect preservation, and were pronounced by Sir E. B. Lytton to be the best specimens he had seen. The founder of this museum was the ingenious meteorologist who is mentioned in connexion with Dalton. He was the original inventor of the life-boat; of an improved species of Æolian harp; and also of a series of musical stones, composed of rough flat sonorous boulders, of the native Hornblendic slate, upon which the lady in attendance plays very pretty polkas and Scotch strathspeys. Specimens of the rocks and minerals of the district, we may mention, may be procured at this museum for a very moderate sum. Keswick also possesses an excellent grammar-school, a public library, and a mechanics' institute.

The population in Keswick in 1801 was 1,350; in 1821, 1,901; in 1841, 2,375; and in 1861, 2,610. Of course, this does not convey a proper idea of the surrounding population, which is growing more rapidly. The valuation of Keswick township in 1864 is as follows:—Crosthwaite division, 2,880*l.*; St. John's division, 4,948*l.* 10s.: total, 7,828*l.* 10s. There is a gas company (established in the year 1845), which supplies the town with gas at 6s. per cubic foot. There is also a water company (established in 1856), which derives its supply from the streams and springs on Skiddaw, and delivers it, on the constant service system, at a moderate rate—to the poorer cottages, we were told, at a penny a week. What a boon would such a thing as this be for Bethnal-green! Finally, Keswick is at this very moment being furnished with a system of main drainage, from the plans of Mr. Lawson, C.E., and at a cost of about 1,000*l.* Few every-day tourists, we dare say, care about visiting a place under the operation of drainage for the first time; but to us it awakens a feeling something like that which a tired and thirsty pilgrim in the desert is said to experience when he discovers a well which has been dug by some previous traveller.

Our predecessor in this case was Mr. Rawlinson, whose very able report to the Board of Health in 1852 is now before us. To recapitulate the sanitary condition of Keswick as set forth in that report would be to describe a condition of things which, fortunately for the inhabitants, has passed away. Twelve years have elapsed before the unwelcome truths which he told, and the unanswerable statistics which he produced, have fully done their work. But in that period Keswick has been purged from its horrible nuisances, supplied with water, and at length sufficiently drained. A physician of the district, Dr. Leitch, who was mainly instrumental in organising the preliminary inquiry and opposing the narrow and confined ideas of the local authority, deserves, we think, a public acknowledgment of his valuable services. There were lanes and alleys in Keswick at that time whose rate of mortality was higher than that of the most densely populated manufacturing districts; and he could point out, within a circuit of a few miles, localities in which scrofula, measles, small-pox, and typhus fever had left their ravages, which districts, with proper sanitary precautions, might have altogether escaped. It will be an interesting task to compare the local death-rate a year hence with that which represented the mortality of Keswick even a few years ago. And to this end we must still urge the local sanitary reformers not to abate one jot or tittle of their exertions; for a long experience of the municipal obstructive malady has taught us to be constantly careful of its tendency to relapse.

The Cockermouth, Keswick, and Penrith Railway, which is now in process of construction, is the next great improvement we must note in the district. It will connect the hitherto isolated capital of the Lakes with two important main lines, and will afford incalculable advantages in facilities of travelling, as well as in the transport of commodities. At present it costs as much nearly to convey a ton of dry goods from Keswick to Windermere, as it does from Windermere to London. This railway consists of a single line 31¼ miles in length. It is estimated to cost 300,000*l.* The engineer is Mr. Bouch, of Edinburgh. During the past week, we understand, the Government inspector, Capt. Rich, R.E., has been engaged in inspecting this new railway; and it is expected it will be opened almost immediately.

We took some notes of the local manufactures. The cotton-mill described by Hutchison had long been out of work before the supply of cotton failed. The woollen trade has dwindled away almost to nothing. The only flourishing manufacture in Keswick is the pencil-mills, which, however, it would require a separate article to describe. We may just mention that Mr. Wilson, of the Greta pencil-mills, informed us that the manufacture in Keswick employs about 100 hands; and that from 10,000*l.* to 12,000*l.* worth of pencils are annually turned out, and exported to all parts of the world. The celebrated mutton ham of Cumberland and the delicious char, which are indigenous to the Lakes (the char is chiefly potted for the London market), still constitute a considerable item of the revenue of the district.

But, after all, the greatest source of wealth in the Lake district resides in the Lakes themselves. It has been calculated by a gentleman in the neighbourhood, who gave evidence to that effect before Mr. Rawlinson, that the number of tourists visiting Keswick during a season was, on the average, from 12,000 to 15,000. Nor is there any reason to suppose that this estimate is too high. Our readers may attach any hypothetical sum to this as the average travelling expenses, and it will then be seen that a tolerable quantity of English gold is every year showered on the district of the Lakes. Tourists, we ought to point out, will do well to visit the district in May and June. There is less rain about this period; the atmosphere is clear; and the beautiful scenery is seen to the best advantage. The month of July is generally wet. After this, there is often a month or five weeks of continued fine weather (locally called "a Michaelmas summer"). Then the foliage begins to vary in colour; but the oak, birch,

---

* See pp. 330, 647, *ante*.

† The name, it has been conjectured, is derived from its site, which must have been originally a swamp abounding in sedges. *Kesh* is a local appellative for water hemlock; and *wick* in Ang. Sax. for village. Hence *Kesh* or *Sedgewick*, *i.e.*, the village by the sedges.

* Hist of Cumberland, vol. ii. p. 156.

† The word *Thwaite*, which is a very common postfix to the names of places in this quarter, signifies, according to Dr. Whitaker, "stubbed ground;" according to Ingram, "a watery, washy place." But Mr. Crosthwaite, of Keswick, who ought to know something about his patronymic, states that it signifies "a clearing,"—with the additional meaning contained of "wood grubbed up," *i.e.* "a forest made into a farm." It is curious that the corresponding Danish word has also this signification.

‡ Quoted from the inscription on the monument by Wordsworth. The statue was executed by Lough, and cost altogether, with the pedestal of Caen stone, 1,100*l.* It is said to be a faithful likeness, and is exquisitely modelled.

and other forest trees retain their leaves till the first severe frost, followed by high wind, when it occasionally happens that the whole is stripped off in a day or two, and the wintry aspect is seen at once. But even in winter, we are told, the scenery is beautiful; and the climate far from uncongenial, particularly in the valleys, which are sheltered from the prevailing winds.

We must now conclude our hurried observations. We have purposely abstained from dwelling on the picturesque beauty of the Lakes. How we climbed over the mountains during the day, and rowed on the Lakes by moonlight; fished for trout in the streams and perch in the Lakes, with other adventures of a similar kind, would probably not be interesting to those who have either visited or who mean to visit the district and find their own experience of a tourist's enjoyment. Nor is it necessary to dwell on the invigorating influences which "a run to the Lakes" is calculated to exercise on the health and spirits. We can only add, that such scenery is calculated, among other things, to awaken the highest emotions of our nature. The last view, as it happened, we had of Derwentwater, was on a lovely evening in July. The sun was setting behind Skiddaw, and gilding with a purple glory the placid and silver water of the lake. The stillness was undisturbed except by the faint ripple of a solitary oar in the distance. Suddenly the band of the rifle corps in Keswick, which separates from drill at ten o'clock, struck up the Queen's anthem, and the effect, as the sound reverberated among the hills and in such a scene, was singularly grand and even solemn. We could scarcely help the reflection, that the little town of these loyal and demonstrative subjects of Queen Victoria was also the last of the strongholds of the subjects of Queen Boadicea; that between these two periods of British history, several empires, republics, kingdoms, and principalities had sunk into oblivion; but that the little territory of those island queens was still the favourite haunt of the genius of liberty; and that it had carried its arms and its arts triumphantly through every quarter of the civilized globe!

The next morning saw us travelling through the valley of Threlkeld, on our way to Penrith, in which ancient town we took rail, and so bade adieu for the present to the district of the Lakes.

TERRA-COTTA AND LUCA DELLA ROBBIA WARE, CONSIDERED ON THE PRINCIPLES OF DECORATIVE ART.*

THOUGH warranted by the custom of the classic ages in Greece and Italy, but few attempts have hitherto been made to revive the use of colour upon statuary. Our own Gibson has had the boldness not to heed the critics, and given tints, though of the faintest, to some of his works; and a slight attempt in gilding and colour has been tried on the tympanum in front of the British Museum. Let us hope that the example in these times of him who is one of the greatest sculptors of this or any other land, may have its speedy followers: a beginning may be started in reliefs and figures in the round of hardware put up all about, inside and out, our public as well as private buildings. For the effect, I would call to mind an instance in the public hospital at Pistoja. There at every step you take in that long broad street facing which it stands, its fine entablature the frieze, in which is figured in relief and variously coloured, with groups, half life-size, setting forth the works of mercy corporal—that is, done to man's body, distinguished from those wrought for his soul,—grows upon your admiration; and, while astonished at the undimmed, unsullied freshness of its tints, all as bright and beautiful, after three hundred years' exposure to the rain and sun, as on the day they were laid on, you cannot but admit the fitness, especially under a sky like ours, of such a mode of decorative art for our buildings. In a grand public botanical garden is it that this sort of highly ornamented hardware would be at home. To every such establishment must, by necessity, belong various offices,—a theatre or large hall for lectures being one; and whether the grounds be laid out in the landscape style, like the Botanical in Regent's Park, or after the geometrical, as in the Horticultural, at South Kensington, the mass of the building is incomplete if not flanked, as at the Crystal Palace, by two high towers,—always beautiful in themselves, but here most especially needed for their utility. The perfection of a garden, with its fountains and canals, and flower-beds, and terraces, all set out after the geometric manner, is to show itself, in all its symmetry, to the eye at once. Failing to do so, it lacks its very essential property, as far as its design. In the Villa Pamfili Doria, at Rome, from the terrace before the house, one looks straight down from a good height on the geometrical garden below, and beholds the whole at once. This is still a want at the Horticultural; for, go up to the terraces, and from no one spot upon them can the eye take in the whole at one view. Walk to the south end, and upstairs to the rooms for refreshment in the late Exhibition buildings, and from no window there can you satisfactorily see the upper or northern portions of the garden. Two tall towers, one at each end of the semicircular arcades, arising up as gracefully, and quite as high as those fine old belfries at Rome, would give, far and near, new beauties to the sky-line, and admit of all the richness of decorative hardware being lavished on them, standing in glorious companionship, with the most magnificent of all fountains,—Minton's,—below them; and as you mounted up their stairs, at every story, the gardens, in all their width and length and design, would burst upon the eye in full and gathered beauty.

The hall for lectures in this (the Kensington Museum) and kindred institutions—call it lecture-room or theatre—more especially lends itself to an elaborate ornamentation in coloured burned clay. Following out the grand true principle that all good architecture is decorated utility, the architect's first thought for such an erection must be to make his building the best he can to answer its especial purpose, or that the words of the speaker as he stands in his place may be well heard at all parts. Though the law of sound in such edifices is still a riddle, yet there are some known facts, among which one is that earthenware, fashioned after certain shapes, is a great help for the clear and distinct circulation of sounds, whether of musical instruments or the human voice. During years was it a puzzle among archæologists to afford any satisfactory reason for the use of those hollow earthen vases found built into the lower sides of several old chancel-walls, till the other day, when this passage in the "Chronicle of the Order of the Celestines at Metz" for the year 1432, turned up:—"It was ordered that pots should be made for the choir of the Church of Caens, Brother Odo stating that he had seen such in another church, and thinking that they caused the chanting to resound more strongly." Coupling this with other acoustic properties that belong to burned clay, the usefulness of it, not to say need for its employment, in all sorts of theatres, wants no proof; and from the numerous fine specimens after so many kinds brought together in this Museum, its easy readiness in yielding such powerful help as a decorative art is undeniable. To my seeming, a hall intended for the utterance of British thought, for the rearing of the British youth in arts and literature, that very spot itself should show upon it, all about it, the workings of the British mind, and speak of Britain: while wrought by British hands, it ought to tell, as far as may be, of two among the other now great staples of British industry and manufacture, pottery and iron. After a stroll in the Horticultural Gardens, and gazing again and again at its glorious St. George's fountain; after wandering thence through the new splendid courts of this Museum; looking around upon what had been done, centuries ago; what was even now doing abroad and at home, in coloured burned clay; and seating myself by one of those peeps into that delicious fern-house with the afternoon's green sunshine on it, I there bethought myself of a hall for lectures. Theatral in figure, its roof, like that of St. Peter's dome, might be ribbed—here with ribs in iron gilt; if not of mosaic, the spaces could be filled in with tiles larger and finer than those round blue plates of the months in the Museum, made by Luca for Piero di Cosimo de' Medici, to put up in the ceiling of a circular study (Vasari, i., 341). Around the lantern at top would look admirably a garland, bolder and richer than any of the wreaths by the Della Robbia school: the stage, with its high tribunal-like shape and broad recess behind, should have much and thoughtful care bestowed upon it; for, in every such erection always must the stage become a striking feature. But it opens, in the present instance, a wide field for the display of our countrymen's power to put forth all those many capabilities in coloured burned clay for decorative purposes, and that, too, under the forms of highest art. Here, then, the most stirring passage, whole and unbroken, in the legend of the nation's patron saint would find a fitting place. To hide the stairs at each side, and yet afford room enough above for the lecturer and all his possible requirements, throw up a grand well-broken front of massive rock fringed with ferns and foliage; show St. George, on horseback, duly armoured, with spear in rest, and his steed properly caparisoned, bounding, full tilt, at the rageful dragon, as it hurries from its den to swallow up alive the fair princess at prayer on her bended knees hard by, with the king and queen, her parents, looking down upon their child from the turrets of their castle overhead: why not a streamlet of water, too, trickling noiselessly among the flowers? In such a place the other patrons of our empire are not to be forgotten: St. Patrick, therefore, must have his legend properly and artistically set forth; so, too, St. Andrew; so St. David, each in his own conspicuous spot. All our men of mark in the arts, the sciences, and literature, may be gratefully remembered in a bust, or statue, or a low relief. Saying, with the poet,—

> "Let merry England proudly wear
> Her blended roses bought so dear;
> On favour'd Erin's brow be seen
> The flow'r she loves of emerald green,
> Let Albin bind her bonnet blue
> With heath and hare-bell dipp'd in dew;"

with free full hand will the architect sprinkle all about the walls the peculiar floral emblems of our different peoples, so that Celt and Saxon may find shining there the flower that each loves best, and all of those symbols blended into one harmonious garland. Outside, the roof-tiles for such a building might be very fine, handsome and gay by moonlight as under the glare of sunshine: instead of the kinds hitherto in use, let them be coloured lightish blue, starred with gold, and brightly glazed. Talking of roof-tiles, what can be so unartistic, so very ugly as those now in general use upon our houses? True is it that for their thinness and lightness slates are valuable substitutes for the old heavy red tile, flat or ridged, and its colour a pleasing variety; but at best its tones are dull. If we had tiles—and for the sake of their lightness, slates—glazed of all colours, and furthermore, some of them streaked with two or three tones of the same tint,—then would the present ugliness be got rid of, and we might have roofs tiled or slated in patterns and after designs more or less elaborate; and, when dulled by dust or befouled with smuts, the first good shower of rain would make them clean and sparkling.

Till a few years back, our shops—large and small—were of the plainest with regard to their ornamentation inside and out, however valuable the goods in their windows and upon their shelves. Now, besides the splendours of large plate-glass, a few display great architectural taste; and some of these might be pointed to as little gems of elegance, especially for their internal decoration and arrangement. But very much still remains to be done among them. If a single picture can draw crowds of travellers a thousand miles to gaze upon it in the town where it happens to be kept, a man in trade may be assured that, to make his place of business inside and out as artistically beautiful as he can afford, is one of the best and readiest modes of advertising the wares in which he deals. Though the shutters be up, a fine shop-front, if well and properly designed, immediately tells the business of its owner, and, while bespeaking the favour, may secure a visit, some other day, of the passer-by. For such shop-ornamentation, nothing can be better than coloured burned clay, especially in the dust and dirt of a great thoroughfare. From many let us select but one as an example. Take a large fishmonger's, with its fine white slabs of marble. Suppose a bold wide border, composed of all sorts of seaweed, among which are lurking fish of various kinds—fish such as Bernard Palissy would have done—along with branches of coral and sea-shells. Such shops, and others like them, are often seen with all their inside walls sheathed with simple white tiling, well glazed; and most cool and cleanly do they look, besides being so wholesome for the eatables sold there. Divide the shining wide walls into panels by other flat glazed tiles, figured in colour with subjects connected with the owner's trade; give them, as a cornice, an appropriate wreath in relief, and, from being plain, the whole place becomes beautiful. Imagine, again, the master

* By Dr. Rock. See pp. 612, 644, *ante*.

of the house to be a royal tradesman, and allowed to have above his shop the royal arms: make those arms, as well as the supporters, artistically done in the round, in coloured burned clay, and the flat shield properly blazoned. A bucket of water and a sponge at the beginning of the London season will be quite enough to cleanse the whole from the griminess laid on them by the dirt of the last twelve months, and leave them as bright and glittering as ever, to enliven the appearance of the street. If nothing beyond the owner's name and trade be thought of, let it not be done, unless for an undertaker, in mournful black and white, but in gladsome tones and garlanded with flowers.

I say nothing of the numerous pretty fountains—never forgetting the poor dogs—which we might have everywhere erected; but, hastening away from our streets, and getting into our fine, wide, well-planted squares, and our lovely unrivalled parks, how many are the opportunities we find there of employing this material in all its decorative forms and beauty. In no one city in the world are there to be found such magnificent open spaces with grass and trees, as London can show in her many grand squares; yet of them all, hardly is there one as flowery as it might be with the flowers that are known to stand a London atmosphere; not one among them can boast of the slightest adornment saving a solitary statue, and that as black as smoke can make it. Suppose one of these squares dotted all about with busts and statues, having its fountains, and in the middle of it an open domed erection for shelter and for shade. To the crowds of little ones, and their elders who have the right of going thither, how recreating, nay useful, would this be in summer; and for all, even the humblest foot-passenger as much as to those who dwelt in the houses around, how pleasing to have such objects, all executed in coloured burned clay, to look upon, even through the dreary dulness of a foggy mizzling day in November. Going into the parks, instead of that heavy lump of over-strength in the shape of a suspension-bridge to a foot-way across the water in St. James's Park, we might have had another, light, elegant, and adorned in a manner fitting the situation, and this with the help, in the ornamental part, of burned clay; for why not have the spandrels of arches in a bridge—this one, for example; but as a better instance, that over the Serpentine, Kensington Gardens—filled in with hollows holding busts, or with reliefs, in coloured clay? Why not, too, have the latter's parapet surmounted by statues in the same material? The refreshment-room close by would be better arrayed, artistically speaking, in a third-rate suburban tea-garden, and is far beneath the dignity of the place in its appearance, which, at a small outlay, might be made to change its actual shabbiness for elegance and beauty. While in these so admirably kept and charming gardens, it would almost seem a wilful omission not to cast an admiring look upon that small though beautiful building, with its wide enclosure, for the waterworks and fountains at the Bayswater end of the Serpentine. At a glance one perceives that what scant ornament it has, was given it by an able master of his craft, and the hands that wrought it seem to have been meddling rather with the softest wax than with stone, so nicely and so smoothly is everything chiselled; yet to my eyes, one element of the beautiful, to render it still more beauteous, is wanting to it—colour soberly applied. Put upon its roof, a tiling in light green, or blue, or pale pink; let in, here and there, reliefs in quiet tones; and methinks we should have in a work which, as it stands now, is justly entitled to our applause, a stronger claim upon our admiration. What life and variety are thrown into every kind of park, if a bust or statue, a fountain, or any erected ornament that catches the white light, be set up midway, and so be seen at each end in the green avenues and shaded alleys formed by trees. Take, as an instance, the trivial thing in the centre of that little sunk garden, once a hollow filled with water, at the east side of Hyde Park, near those lovely flower-borders running, a long way, parallel with Park-lane. Many are the great names we have to be proud of, now forgotten to the people; yet, while we thus commemorated our country's worthies, much beauty, at small cost, would be added to our public walks.

Among those various purposes to which the material under notice may be easily applied, none is there where it would be more suitable than in a decorated dairy. Who has not heard of the many instances in which a fond husband has so contrived that, during a short absence from a favourite home, on her return, an agreeable surprise should be waiting to welcome back his well-beloved wife. Those who have seen that little gem of elegance and high artistic taste at Windsor Castle,—that small chamber there, the whole fitting up of which and every ornament in it, even the hinges to the doors, had, for such a work of love, been planned and wrought after the designs and sketches done by the late Prince Consort's own hand,—will understand my meaning. Let us imagine such a purpose, and that it so happens that the lady's baptismal name or names have a floral significance,—that she is called Rose, or Margaret (Daisy), or Lilian,—the latter for example. This circumstance may be turned to good account. For the building of his dairy, the architect will look about him for a little grove of trees to shade it well in summer. If, for the outside walls, instead of stone, he may have bricks, he will get them of several tones in greyish white, and, to save his elevation from the reproach of tameness, he will checker it with the sober use,—but not streaky,—of red bricks, they, too, in different tones. For the reliefs, in plain burned clay, to be let into the entablature, when cows at pasture or being milked are thought of, a good artist can have no difficulty in selecting subjects; and for the caps of pillars, our English meadow-flowers, and our English woodlands will furnish appropriate types of ornament. For the roof, the tiles will be green, and fashioned to the shape of our native water-lily leaf, slightly crisped at both edges, as it often is when a gentle breeze is curling the water where it grows. Here and there among the leaves a water-lily with its many-petalled head may be put; but the cresting all along the roof will be a row of these flowers, made large and in the round. Thus the whole, with its pan-tiles in ridges glazed in green, and its white flower-crest, besides colour, will have given it the additional charm of light and shade. Inside, its coved ceiling, its walls, its pavement will be all tiled, and with tiles for the floor as white as morrow milk; for the walls, of the tone of Witsun cream; for the ceiling, of the softest yellow buttercup. Made to gurgle by the roughness of its rocky bed nicely sunk in the floor, down all its length will run a stream of clear spring water, overhung by a border on each side of ferns, forget-me-nots, but most especially of the various flowers of the water-lily tribe. Upheld by large, bold brackets, in the shape of lily-stems, the shelves will be thick slabs of white glazed clay, bordered with a wreath of lilies of the valley, tulips, fritillaries, and other kindred flowers, not raised but painted; and of the same material, and in the same style, will be the milk-pans resting on them. Instead of the common-place lattice-work over its many windows, hang wreaths, like Luca's, there, but so contrived, with spaces between the leaves, as to freely let in plenty of fresh air in summer; and let these drooping garlands be made up of all the milk-wort family of flowers, to which must be added the bugloss (*Anchusa tinctoria*), and the graceful arnatto, those two flowering-plants which give the English dairy-maid the colouring for her cheeses.

If not already warned upon the subject, I would put you on your guard not to sink, in those of your works that are meant to stand the outside weather, any hollows which can hold water. If you do, the likelihood is that the first winter they are exposed they will be severely hurt by frost. While becoming ice, water crystallizes, and with such mighty action that, no matter the smallness of the quantity, nothing can withstand its strength; and as the ice after is larger in bulk than the water before freezing, the hollow being too small—too narrow for it in its new state—cracks; and when the thaw sets in, the broken piece falls off, and thus many a valuable production is deformed. In Mediæval architecture, not a moulding but one holds water; and in that one which does, the shallow is of such lines that, in freezing, the water has room enough, while outspreading itself, to rise upwards. Hence comes it that, although hundreds of harsh sharp winters have gone over them, those splendid monuments of our forefathers' munificence and wary thought, exuberant though those buildings be in deep-cut mouldings, roving crockets fashioned like leaves and flowers, and bunchy finials, still remain in wonderful preservation.

Turn we now from suggestions to realities, and let us see what has been done—what is now doing—with this material, in all its several branches.

Without needing to go further than this Museum and its neighbourhood, we come upon various interesting instances respecting decorative unglazed burned clay. Some works in white, done by Mr. Blanchard, of Blackfriars-road, possessed by the Museum, as well as those sharp, well-brought-out casts from the bronze flag-stands before St. Mark's, Venice, doing the same duty now in the Horticultural Gardens; but more especially the ornamentation in red upon the western wing for the residential houses attached to this establishment, tell us loudly how admirably an Englishman of the day can execute anything asked of him after this fashion. But a masterpiece of English pottery in high art is the life-size statue of the great James Watt, that came from the hands of the same able manufacturer. Red clays, in a variety of tones, from a deep to comparatively a light one, can be got, and so nicely graduated as, when wrought together, to give a most powerful effect to an elaborate design. Had Mr. Blanchard availed himself of such an artistic colouring help upon his otherwise fine work in the west wing, just now noticed, all of it would have been much more telling, and stronger renderings given to all the lines in its ornamentation, which is somewhat too small to have all its beauty seen and appreciated at its present height. The large statue of Galileo Galilei, from the workshops of Signor Boni, of Milan, besides a section of an elaborate architectural elevation from the same artist, in red clay, show us what Italy can produce. In this latter admirable piece, the ornamentation is sharp and distinct in all its outlines, and those beautiful and exquisitely modelled busts, in the round, come forth well. The whole is so managed as, though very ornate, its parts are not too small, and its surface not crowded, but everything is boldly but not overmuch, thrown up so as to be advantageously beheld from below, and at a distance, having thus a light and shade of its own,—properties to be wished for everywhere, but more especially in a land like England, with its often overclouded sun, and beneath a sky that, months long, darkens London.

Signor Boni's works remind us of Milan, and Milan, of its magnificent hospital, about which we have before spoken, so beautifully fraught with burned clay ornamentation. But if Milan may justly boast of an erection as one of the finest of its kind at the period, London can show a building in progress which, when finished, with all its decorative burned clay upon it, will not only stand, for grandeur, beauty, and vastness, before the Milan hospital, but anything else after that manner that has been done since. What the great Hospital at Milan is to Italy, we foretell the South Kensington Museum will be, not to England only, but to Europe, one of the finest among the fine erections in that style; and the man who built it, Captain Fowke, will take a high place upon the roll of England's distinguished architects; and his name, along with that of Mr. Sykes, who made the drawings and models for the decorative parts in burned clay, as well as that of Mr. Blanchard, who executed them, will go down to admiring future ages.

In the front of the late International Exhibition, towards the Horticultural Gardens, burned clay, as far as it is called upon for help, is very efficient, and constitutes the most pleasing feature upon that building, which might have been much improved by a more extensive employment of its enrichments. All about the Horticultural Gardens themselves burned clay architectural ornamentation is brought in, and more especially upon the inside of its noble conservatory, but by no means as much and as artistically as might have been. In such a wide and favourable field, still open to the adaptation of our national pottery in all its several branches as a decorative art, let us hope to behold, ere long, its employment there in garlands, friezes, busts and reliefs, and statues,—all, like its thus far unrivalled fountain, in artistically wrought and beautifully coloured clay. Nothing would better show the world what may be done in this material.

Going to hardware glazed and variously coloured, we find that, for walls and flooring, the tiles produced by Minton, by Maw, and others, are what we want. Those especially with a pattern deeply sunk, manufactured by Minton after Pugin's designs, are admirably adapted for walls upon which a diapering like any of those beautiful ones we admire so much in Westminster Abbey, Canterbury Cathedral, Selby Church, and Lincoln Minster is required.

The productions of M. Devers, a Parisian manufacturer, are very good both for their mo-

delling and their smooth, even, well-chosen colour; but the bust by another French artist, of Luca della Robbia, is sadly at fault regarding costume, and most egregiously so in its garish colours, daubed upon it so blotchy.

For all ornamental domestic purposes, Minton's pottery has won for itself not only an English, but a European reputation, so that it is needless to point out the many fine specimens of it in this Museum; but as we began, so will we end this lecture with the mention of that man's name, and that, too, in connexion with the largest and most elegant work of its sort ever produced in this or any other country, that splendid fountain now in the Gardens of the Horticultural Society. The land that wrought this great work could, we are sure, if asked, send forth still mightier works of the kind. On looking on that splendid figure of St. George, and all the several accessories of so diversified a character around him, confident are we that the hands that modelled, coloured, and fired everything there, are well able to people our squares, our streets, our edifices, public and private, to the world's delight and instruction, with thousands of statues in coloured burned clay.

All through this lecture I have tried to guard myself against the use, while dealing with my own words, of such terms as terra-cotta,—enamelled terra-cotta,—encaustic tiles,—Luca della Robbia ware,—and for the reasons following. Always are such expressions outlandish; and, though such hard words, with their learned length, may astound the crowd the more they are not understood by them, those very words fail in their object, which is, or ought to be, to afford people information: quite wrong in their application to hardware, they mystify the better educated, whom they lead astray respecting the various and oftentimes totally different methods and materials which art employs in her several productions. Take, as an instance, the term "encaustic." This means, and among the ancients was assigned to, quite another craft and process essentially apart from that of colouring and firing tiles or any other kind of pottery. For true enamel, other ingredients are required; and are laid upon metals, not clay. Again, the making of figures out of earth, giving to them a coloured glaze, and fixing it by fire, belongs, of right, to the early Egyptians far more than to Luca della Robbia or to Minton: nay, as much as priority of time in use or invention can bestow a title, more fittingly is such an appellation of honour rendered to that ancient people than to the Italian or to the Englishman, of whom neither the one nor the other can with fairness attach his name as the originator of that specific sort of hardware.

When old Chaucer, in sketching his pilgrims, tells us of one of them "cleped Hubert," and how:—

> "Somewhat he lispèd for his wantonnesse
> To make his English swete upon his tonge,"

we laugh, like the poet, at this foolish limitour's childishness and silly affectation; but ought we to smile or frown the while we read the catalogues to some of the national museums, and find page after page bespattered with words and phrases borrowed, and without the slightest need, from French and Italian, as if it were the advertisement of a Parisian curiosity shopkeeper, or the bill of fare of a Neapolitan pastry-cook. Of a truth, our dear old mother-tongue, while it has about it the strength of iron, can take the burnish and the brightness of glittering steel, and be made as bendable as the wants of any pen can need. If English undefiled was able enough for a long and large race of men who have by their writings "in words that burn and thoughts that breathe"—raised our literature to be among the finest that mankind either ever had or has, surely it ought to be good and full enough to answer all the wants even of the compilers of our art-museum catalogues.

For the description of art-works, ancient and modern, I am aware, a particular set of terms—a phraseology of its own—is required; but it easily can, and ought to be, in unmistakable English for English folks, of whom not the thousands only, but the millions, know nothing of any foreign language, words borrowed from which are so much gibberish to them,—and not to them only, but to the better educated. As, among a crowd of others, I happened, a few weeks ago, to be looking at a collection of antiquities labelled by one of those who have adopted the modern style of wording, a gentleman of classical acquirements—an Oxford, M.A.,—asked why a small piece of stone figured with Egyptian hieroglyphics should be called "an Egyptian plague?" There was a laugh, and he was told it was an Egyptian "placque:" the second and, as far as the label spoke, correct reading, that was meant to scatter, only thickened, the mist upon this scholar's mind.

If a cure for such a vanity is to be wrought, it must be begun by a department which is bound up with science and education, as well as art; and among those who work under it there are those who might very soon draw up a fitting set of terms in pure good English, for the description of anything of an artistic nature that could possibly find its way to our museums. Then, instead of, as now, taking at second-hand, more especially from France, terms which the best French writers reject as unfitting and inadequate for their purpose, we should have an art-language of our own, as clear and as expressive as it was English, and to be understood by all. Not unoften do our smatterers in art-words bring to mind the poet's Madame Eglentine, of whom he says,—

> "And Frenche she spake ful fayre and fetisly
> After the scholé of Stratford-atte-bowe,
> For Frenche of Paris was to hire unknowe."

Having these appliances within easy reach, it remains with our patrons of art to ask for, and with our artists to make themselves able to quickly answer such a call for their employment. Augustus was wont to say that he found Rome of brick, and left it of marble. For myself, I would much rather behold our houses built of brick, yet with all that ornament upon them which those very bricks themselves can have, along with the other various beauties that burned clay, uncoloured and coloured, can so easily bestow, than witness large blocks of marble, bought at great cost, heaped up into so-called palaces, and unartistically adorned. The sentiment of that good old English monk, Matthew Paris, who, while setting down the works done for the abbey church of St. Alban's, by the handicraft of his brother monks there, and telling, as it might be, of a silver frontal for the altar, a jewelled shrine for the patron saint, or a golden image of the blessed Virgin Mary, says, *In quo divus materiam superabat opus*,—holds good here. It is not because a house is made of marble that we should at once admire it, or think little of another built in brick: our admiration ought to be for the art-work bestowed upon its materials, whatever they may be—slabs from Hymettus and Carrara, or clay from the potteries.

It was the boast of Cicero that his country-houses, small as they might be, were the gems of Italy,—*ocelli Italiæ, villulæ meæ*. This could only have been from the artist's handicraft judiciously applied to these residences. Let every Englishman, with wealth enough at his command, try and make his house one among the ornaments of his country in the provinces; and however small it be, one of the stars in the square or street in London where he lives, and thus show that, like the old Roman, he is glad to lend new beauties to his native land, and solace to his fellow citizens.

The good result of this will be, that our most dingy streets, our dullest thoroughfares, will put on an everlasting look of gladsomeness; and those who have every day to walk them,—if in health and happiness, will be still more cheered; if in sickness and in sorrow—and sorrow and sickness betide us all—will not be still more saddened by their appearance: instead of our present rather wide-spread meanness, we, too, shall have, everywhere about this vast metropolis, "our streets of palaces and walks of state,"—palaces not merely so because they are the dwellings of nobility, but palaces of literature, or arts, of sciences, and of trade. With our roofs all tiled in tiles well glazed, various in colour, starred in gold, or diapered in a pattern and artistically set out, we shall have, instead of grimy miles of dull red tiling and ugly chimney-pots, something beautiful to gaze upon as we look down from the top of Hampstead-hill or Highgate over the vast city sparkling beneath the sunshine, or as it twinkles in the moonlight as if it were all overspread with glass like some huge crystal palace.

Not long ago we had the New Zealander among us. When next he comes again,—when century after century he comes,—it will be, let us hope, each time to find London—England—richer, greater, more adorned, than before. Instead of becoming the fulfiller of Macaulay's dream, and seeing in the shattered dome of St. Paul's a picturesque ruin to sketch from a broken arch of crumbling London Bridge, it will be to discover fresh splendours all about him there. Standing on now new Westminster Bridge, wide and beautiful as it is, he will observe that, above and below it, others wider and more stupendous are bestriding our noble Thames. Instead of shivered cupolas and mouldering walls, he will behold, as fitting objects for the drawings he wishes to take back with him, the magnificent streets, the splendid palaces, the glittering roofs, the artistic gardens, the majestic buildings of renovated and architectural London.

But to this important end I must recall to mind that soul-stirring, noble charge which Nelson, just before meeting the foe, and his glorious victory over him at Trafalgar, is said to have sent round all the fleet, in this short sentence,—"England expects every man to do his duty." Wishful that the cry I here utter may go forth hence and reach the ears of English, Irish, Scotch, and Welsh noblemen and gentlefolks, and awaken them to take their part in this great national work; remembering, too, that of my audience there may be present individuals from every quarter of the empire, I fain would somewhat vary Nelson's wording and say,—"Britain expects every man—ay, every woman, too,—to do their duty." I say *woman*, for I believe the instincts of woman are quicker than man's in spelling on the face the feelings of the hidden heart; I believe her light hands better able than his to write upon the clay her own keen readings of our humanity; and we know what a few good strokes, however slightly made, can do in bringing out all the truth and all the beauty of expression. Genius, like the soul, is of no gender; and at all times there have been women who excelled in all the arts and sciences. As a witness of his own days, Vasari, in his life of Madonna Properzia de' Rossi, observes,—"There are women who have not disdained to contend, as it were, with us (men) for the vaunt and palm of superiority in a different arena (of literature), and have set themselves, with their white and delicate hands, to mechanical, or, speaking more exactly, to manual labours; forcing from the rigidity of marble, and from the sharp asperity of iron, that fame which was the desire of their hearts, and succeeding in the attainment of its highest eminence, as did our Properzia de' Rossi of Bologna, a maiden of rich gifts, who was equally excellent with others in the disposition of all household matters, while she gained a point of distinction in many sciences well calculated to awaken the envy, not of women only, but of men also (Lives, ii., 238). Within our own remembrance, there have been many distinguished lady-artists. Princess Mary of Orleans gave to the world that beautiful statue of the famous but unfortunate maiden warrior, Joan of Arc, which she not only modelled, but chiselled, too, with her own hands in marble. Miss Hosmer, the pupil of our Gibson, lately charmed us all with the exhibition of her fine statue of Zenobia. Among our aristocracy there are high-born dames who, I know, can model exquisitely. Lady artists, you belong to an ancient, an illustrious, a noble sisterhood; for you it is, in these our days, to lengthen this brilliant succession, and add, by your artistic talents new glory and fresh honours to your honourably and highly honoured pedigree; and, ladies and gentlemen, as I say farewell, let me bid God speed to the great, the glorious, the national work before you.

THE COLOURED DECORATION OF CHURCHES.

THERE is, perhaps, no department of the Gothic revival in which we are so behindhand as in the knowledge and practice of the application of decorative colour to the interior of our Gothic buildings. In the course of our restorations during the present generation, we have so generally found traces of decorative colouring on the walls and arcades of the churches which have been wholly or partially stripped of their accumulated coats of whitewash, that we may take it for granted that it was the usual, if not the universal custom, of the Mediæval architects,—our masters in the art. The public would not tolerate the want of decent finish in the plain plastered walls of our churches; architects would not submit to the want of additional force which a little judicious colouring would give to the architectural details of their buildings, if we had not all been brought up in the school of whitewash. Perhaps we should have been further advanced in the restoration of decorative colour if some of the early experiments in it had not been so unfortunate as we must admit they

were. These experiments were usually the work of enthusiastic amateurs, who, finding traces of the ancient colouring on some portion of a church, or on some item of its furniture, set to work incontinently to restore it; and the result was commonly anything but satisfactory.

We are free to admit that we have studied a good many such examples of the ancient polychromy of churches and their furniture with a great deal of perplexity of mind, and are prepared to confess honestly that we do not always appreciate them. That they did not look harmonious and pleasing when surrounded with all their Mediæval accessories, we hesitate to say; but we venture to say that many of them look very strange and *bizarre* now; and, when they were coarsely and crudely restored, and the glaring patch of colour was seen amidst the plain stone and whitewash of the rest of the church, they were so utterly incomprehensible and gaudy that they discouraged the experimenters from any further essays in the same direction, and created a public outcry against the very notion of attempting to revive the Mediæval system of decorative colour.

But the fact remains that our ecclesiastical buildings, with their unrelieved stone and plain surfaces of plastered wall, are unfinished and unsatisfactory; and it is high time we took it in hand to try to ascertain what are the principles on which we may obtain the relief and finished effect which we cannot doubt that colour, rightly applied, would give to the interiors of our churches. Notwithstanding what we have thus frankly admitted, as to the failure of experimental attempts to restore bits of ancient Gothic colouring, we venture to assert that the first step towards any serious endeavour to discover a system of colouring which shall be satisfactory to our modern taste, is to ascertain more thoroughly than we have yet done, what was the general system on which the Mediæval architects applied colour to their buildings. We know, if only from their stained-glass windows and their illuminated MSS., that they were great masters of the art of arranging positive colour so as to produce a harmonious effect. We all admit that they were great masters in the art of architecture, and we should expect, *à priori*, that men who were such architects and such colourists, would know better than to spoil their buildings by a barbarous application of crude inharmonious patches of colour. We should expect that even if we found it necessary to modify their system to suit our modern taste, we should at least find some valuable principles as a basis for the development of a modern system, and a good many suggestive hints, which would help us in the details of our designs. We submit that at present we have not evidence enough before us to form an opinion upon. All that has yet been published on the subject of polychromatic decoration is of small portions of the building, or special items of its furniture, or the scraps of wall painting which have been engraved in the transactions of our various archæological and architectural societies. We want more evidence, especially of the few lines and touches distributed over the whole building, which helped to bring the spots of more elaborate colour into a general system. Having ourselves collected some evidence of this character, much of which is hitherto unpublished, we propose to lay it before the reader as our quota towards a more thorough examination of the subject. A considerable proportion of the notes which we shall be able to give will be fragmentary; if others will contribute to the fragmentary notes out of their own sketch-books, we shall probably find ourselves in possession of fragments enough to afford the data for some general conclusions. But in one or two instances we shall be able to give indications of the whole system of decoration in particular churches; the systems will be found to be of the simplest kind of decoration; but perhaps they will not be the less valuable for our purpose on that account; since we shall be the better able to understand the more complex systems of colouring when we have once mastered a few examples of a simpler kind; and because it is the simpler application of colour that we want to begin with in any attempt to introduce it in our own practice.

We first of all look through the whole series of examples which lie before us, in order to ascertain if they will fall into any natural arrangement or classification. We see at once that there are two great classes into which we might divide the whole series. In one class the painting is merely decorative: it is applied to give emphasis and additional enrichment to the principal architectural features of the building, viz., to the pillars and arches of the arcades, and to the doors and windows; to bring out the details of the moulded and carved features with greater distinctness, and give them the heightened charm of colour; and to break the monotony of the plain wall spaces by bands and diapers. Into another class we may place all the painting which contains pictures of divine and saintly personages, and Scriptural and legendary subjects; though these pictures were probably always combined with painting which was merely decorative.

If, again, we arrange our examples chronologically, we do not observe any very striking differences of style corresponding with the architectural styles, the Norman, Early English, Decorated, and Perpendicular. There are some peculiarities in the earlier examples, which embrace those of the Norman and extend some way down into the Early English period of architecture. The rest of the series, down to the end of the Perpendicular period, does not seem to present any differences sufficiently characteristic to justify us in attempting to break them up into different styles; for though the details vary in fashion, the principles of treatment are very much the same throughout the pure Gothic period. It is only when we arrive at the Jacobean period that we find a really new style of decoration introduced.

The earliest style of decorative colouring seems to have extended over the Norman period, and some way down into the Early English period of architecture, viz., to about the time of Henry III. The change in the style of colouring does not, therefore, coincide with the change in the style of architecture. In glass-painting we find the same thing, the Norman style of windows extending some way down into the thirteenth century. It might, perhaps, have been expected *à priori*, that there should be this correspondence between glass-painting and mural-painting, since it is very likely that the same class of artists designed both.

The walls are very commonly covered with lines in imitation of the joints of masonry. The lines are sometimes single, and these are nearly always dark red. Sometimes the lines are double, and then not uncommonly one line is light and the other dark red, or one is red and the other black. Some of our readers may be disposed to cry out against this mode of treatment as sham masonry; but though the pattern is undeniably derived from masonry jointing, there is no attempt to deceive the beholder into the belief that the walls are of fine hewn stone, and the pattern seems to be used honestly as a simple diaper pattern, for the sake of relieving the monotony of the plain plastered surface. Often an ornament is introduced in the middle of each rectangle of the pattern, which very much enriches the effect. There is an example of a Norman pattern of this class on the walls of the church of St. Cross Hospital, Winchester; another, from the staircase of the crypt in the church of St. Radegonde, Poitiers, is here engraved. (Fig. 1.)

A glance at any extensive series of drawings of mural paintings is enough to show that the use of this "masonry pattern," with and without the central ornament, is common in the plain wall spaces of every period of Gothic architecture. But in this first Norman period the effect of masonry is also aimed at in the decoration of the arches and other architectural features of the building, particularly of masonry in which different coloured stones are used. It looks as if the decoration had been designed to satisfy eyes which had been accustomed to the constructive colour obtained by the use of different coloured stones and marbles. It would be natural to us in colouring a circular arch to treat it like a great bended bow, and carry continuous lines of colour or ornament round it. If there were mouldings carved round the arch, we should certainly take them as the *motif* of our colouring; and if there were not, we should probably imitate the effect of continuous mouldings by continuous lines of light and shade, or of contrasted colour. But in the Norman artists picked out the arch in regular voussoirs, and very frequently painted the voussoirs of different colours. Even when there are carved mouldings running round the arch, the arch is still often picked out in different coloured voussoirs, the colour of each voussoir running through the whole suite of mouldings carved upon it. And where there is a projecting hood moulding over the arch, the hood is also picked out in short lengths, and each length is painted of a colour which contrasts with that of the voussoir with which it is in contact.

The system of colour is very simple. The walls are generally prepared with a coat of fine plaster, of a pale buff colour, which forms the ground of the ornamentation. The lines which mark out the stones are usually red, the voussoirs are usually pale buff, yellow, dull red, and black; a little further decoration is sometimes added, in which a brighter red and blue and green are sparingly used.

These are some of the examples of this style of decoration which have come under our notice. In Rochester Cathedral, the whole of the Norman work seems to have been covered with colour, the stones of the shafts and arches being alternately red, green, and yellow, regardless of the mouldings upon them. There is a Norman arch in the south transept of this cathedral covered with plaster, which is picked out in alternate voussoirs of green, red, and yellow; while the label moulding is picked out in similar short lengths of colour which contrasts with that of the voussoir with which it is in contact: thus, if the voussoir is green, the bit of label over it is red or yellow. The arches of early Norman date at Winchester Cathedral have a coat of plaster over the masonry which retains indications of colour. On the side of one of the arches that faces eastward are radiating lines to represent voussoirs, and in each voussoir are intersecting bands of red, which form a kind of cross pattern, which bands are dotted with spots of a deeper red. The opposite side of the same arch is ornamented with a different design, of the same colour, with a scroll pattern running round parallel with the arch. Again, on a screen at Winchester Cathedral against the south wall of the lady-chapel which has triplets of shafts, the centre shaft of each triplet is painted alternately red and black, while the shafts on either side are of the contrasting colour; and there is no relief of the whole colour except that there is a black band round the red shafts at about every foot of their height.

At St. Alban's Abbey Church we are so fortunate as to have a considerable number of Norman arches in the nave, in which the original decoration may still be traced; and they afford us an extensive and valuable series of examples of design in this style of decoration. They have only lately been discovered, and are, we believe, yet unpublished: we therefore describe the whole series as well as we can with the assistance of two illustrations.

The piers and arches on which the decoration appears are of the work of Paul of Caen, 1077-1088, and are built in great part of the Roman bricks obtained from the adjoining ruins of Verulam. They are covered over with fine plaster, of the usual pale-buff colour, which forms the ground of the decoration.

Each arch is plainly recessed, of three orders, which we shall describe as the outer angle, the middle angle, and the soffit angle. In No. 1 the original colouring of the outer and middle angle seems to have been effaced, and we have only the decoration of the soffit left, which, however, is interesting. The angles are marked off in voussoirs by dark-red lines, the stones being alternately buff and yellow; the remainder of the face of the soffit is marked out with a masonry pattern, and further ornamented by the insertion of dark-red ornaments in the middle of each rectangle, the ornaments are a star on each stone of one row and a circle surrounded by dots in each stone of the alternate row.

The capitals are also ornamented with colour. Under the abacus is a broad stripe of different colours, grey, yellow, brown-red, yellow and grey, each $\frac{3}{4}$ in. wide; then 3 in. deep of red bounded by black.

The second pier (Fig. 2) has its decoration more perfectly preserved. The outer angle is divided into voussoirs, which are alternately white and yellow. The middle angle is divided into voussoirs, which are yellow, white, and *black*, alternately. The soffit angle is divided into voussoirs of the same colours as the middle angle, and arranged in the same order, but of unequal size, so that they do not coincide with them. The face of the soffit is divided into masonry patterns, as in No. 1, and each stone is ornamented with a flower, which is set on a curved stalk which springs from the base of one of the jointing lines. We give the flower in the margin to a larger scale; the stems are red, the flower lavender, strongly outlined at the base of each petal with black; the effect of the pattern is very pretty.

THE COLOURED DECORATION OF CHURCHES.

Fig. 1.—From St. Radegonde, Poitiers.

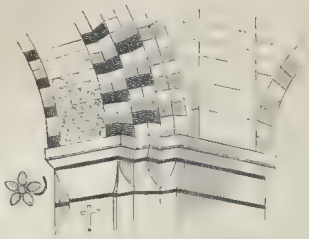


Fig. 2.—St. Alban's Abbey Church.

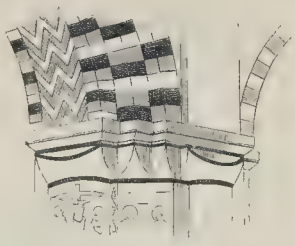

Fig. 3.—St. Alban's Abbey Church.

Fig. 4. Window Decoration: St. Alban's Abbey.

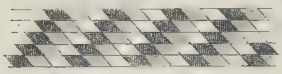

Fig. 5.—Wall Pattern: Carlisle Cathedral.

Fig. 6.—Norman Doorway from Cloister Court, Fountains.

No. 3 (Fig. 3) has the outer edge of white, yellow, and black voussoirs, the middle edge of the same colours, but differently arranged, viz., white, *black*, and yellow, and the soffit edge of white, yellow, and black again; the voussoirs coincide all through. The soffit is ornamented with a double chevron pattern, alternately white and red; the chevrons meeting on the apex of the arch in a double lozenge. In the capital of this pier, the band of colour used in the abacus divides, as shown in the cut, and the lower portion (which is red) hangs in loops on the segmental faces of the cushion capital.

In No. 4 the outer edge is of white and yellow voussoirs, the middle edge of white, yellow, and *black*, the soffit edge again of white and yellow; but the stones do not coincide. The soffit is ornamented in a way which may be described heraldically as lozengy, the rows of lozenges being alternately white and yellow.

In No. 5 the outer edge is of yellow and white voussoirs, the middle edge of red and white, the soffit edge of *black* and white, and the face of the soffit is ornamented with large thin chevrons, alternately white and red, which form a St. Andrew's Cross at the apex of the arch.

No. 6 has the outer edge of white and yellow voussoirs, the middle of red and white, the soffit edge of *black* and white, the face of the soffit of chevrons as in No. 5, but turned in the opposite direction, so that they form lozenges where they meet in the centre, as shown in the margin of the woodcut. In all these examples the spandrels between the arches have been picked out in a plain masonry pattern; in some of them, *e. g.*, on the north pier nearest the transept, the pier itself has been picked out with angle voussoirs of white jointing lines on a yellow ground, while the face of the pier has been picked out in masonry pattern in red lines, like that on the face of the soffit in No. 1, only that the stones have no central ornament.

In the south transept we find some other varieties of ornament. In the arcade on the east side, between the transept and the chapel, in the pier and arch nearest to the tower pier, the voussoirs are more elaborately jointed. The stones themselves are yellow, the joints between are white, and the lines which mark out the stones are black on two sides, and red on the other two, as indicated in the woodcut. Over the arch is a band of ornament, in a white pattern on a dark red ground. The other two arches in the same arcade have red voussoirs with wide white jointing lines. The plain masonry pattern is marked out with red lines as usual.

Two other fragments help us still further to the attainment of the complete scheme of decoration. One is a fragment of decoration round the window next to the north-west pier in the transept, which is represented in Fig. 4. The ornamentation is entirely in black. Again, under a south window in the nave, is a long band of colour, 30 in. wide, which looks like a kind of stringcourse, carried under the nave windows.

An example (Fig. 5) in the south transept clerestory of Carlisle Cathedral will illustrate the masonry wall pattern, and the division of the arch into regular voussoirs, of which we have spoken above. In the small side arches of the triplet the painting proceeds a step beyond the mere division into voussoirs. The right-hand arch, for example, is really composed of two stones. The ray-like lines are scratched on the stone with a chisel, and then painted with red. But this triplet also gives us an example of the way in which the capitals of pillars often have their carving brought forward and heightened in effect by the use of colour. The plain part of the capitals is coloured red, and the carving of the lower part of the capitals is brought out with red, as indicated by the tinting of the woodcut. A line of red is also run in the quirk of the abacus, and of the base, and of the imposts of the jambs.

At Rochester Cathedral, in the triforial arches of the nave, we have also some traces of this more ornate style of decoration. The sculptured enrichments which fill the spandrel spaces between the double arches and the containing arch are picked out in different colours. In the recent restoration of Carlisle Cathedral, some painted stones, parts of the Norman building, which had been built up into the wall of the Early English north transept, were brought to light again, and supply us with additional examples of elaborate Norman painting. Of these examples of the chevron moulding round an arch, the first has the chevron coloured yellow upon a ground of red, the *fleurs-de-lys* and pellets being white; the second is a more elaborate example: the middle part of the stone has a claret-red ground, the roll-moulding on it is orange, with central stripe of blue, in which the beads are white; the plain roll at the angle of the stone has red ovals edged with orange, on a ground of blue. At Fountains Abbey there are traces of painting on one of the Norman doors from the cloister into what is now called the "brothers' room," which supply us with another example of a different kind, and is represented in the accompanying wood-cut. (Fig. 6.) It will be observed that the points of the chevrons on the hood do not coincide with the edge of the moulding, but fall upon the face of the chamfer. The broad face of the arch is picked out into voussoirs by red lines, which do not coincide with the actual joints of the masonry. On the walls of the room into which this doorway leads are traces of red, which seems to be the ground-colour of its painted decoration. In addition to the two capitals from the clerestory of Carlisle already mentioned, another larger example, from the tower pier, in which the plain upper portion of a common cushion capital is enriched with a painted pattern. At St. Alban's is a loose Norman capital lying in the south transept, on which two animals are carved; the ground has been painted red, so as to throw up the carving; and this seems to be a common mode of relieving bas-relief architectural carving.

Our Norman examples have hitherto been taken from cathedrals: there is an example of the same style (though, perhaps, late in the style), at East Ham, near London, from which we may, perhaps, gather the whole scheme of the original decoration of an apsidal chancel of a little Norman church. The apse is lighted by three round-headed lights. Under these windows runs a broad stripe of brown, which looks as if it had been painted over again in modern time. Beneath this stripe there are indications of a plain masonry pattern in red lines. Round each window is a red line parallel with the edge of the window splay, leaving a margin of 3 in. or 4 in. wide, which is divided by double red lines into alternate long and short: the smaller stones are coloured red, the others left of the buff colour of the ground. Within the splay another line runs round parallel with the edge of the splay, and 3 in. or 4 in. from it, so as to leave a plain margin,* and all the rest of the splay is covered with a plain masonry pattern of red lines. The rest of the wall space is also covered

* One is inclined to suspect that this margin must have been originally divided into red and buff stones to match the adjoining outer margin.

CHAPEL OF THE RUSSIAN EMBASSY, WELBECK STREET, LONDON.—Mr. JAMES THOMSON, ARCHITECT.

with a masonry pattern, but enriched with a red sexfoil ("voided" of the ground colour), on each stone. A scroll foliage pattern runs round the top of the wall, and gives an appropriate finish to the wall decoration. The chancel arch has the margins of its soffit treated like the outer margin of the window, and within these margins runs a scroll foliage pattern of Early English character, with a rudely drawn head in the apex of the arch. Mr. G. Buckler, who saw these paintings when newly discovered, says that these marginal squares were filled with some pattern now so indistinct as not easily to be recognised, and that the predominating colour in the border was verditer green. There were also life-size paintings of figures on the spandrels of the chancel arch, which have now been obliterated. There is another example of early decoration in the little village church of Little Braxted, Essex. It is a picturesque little Norman building, with a semicircular eastern apse. A slight difference in the thickness of the wall, on the north side only, serves to show that a rather large proportion of the building was divided off for a chancel. It seems to have had originally three small round-headed lights at the east end, and a large one on each side of the apse. A Decorated two-light window was subsequently inserted for an east window; and all the rest of the windows are irregular insertions of later date than the walls; but at the west end are two original pointed lancets with a plain round window over. In the course of recent restoration three different dates of wall-painting were brought to light. The first was probably coeval with the building. The walls had been washed over with a thin coat of buff-coloured plaster, and then painted with masonry pattern in double lines of dark red colour. The pattern was continued in the splays of the original windows, the lines converging in the arch of the splay. Of the same date, no doubt, were two dedication crosses, which still remained under the two original windows at the east end. These crosses were of the form called *botonnée* within a circle. The cross was of dark red colour; the circular margin is now of a dirty neutral tint, which, perhaps, was blue or green; and the ground is of a slightly pink tinge.* Over this appeared another wall decoration, which had been done subsequently to the blocking up of the two round-headed original lights on each side of the eastern triplet, and was, perhaps, coeval with the insertion of the Decorated windows at the east end, and elsewhere. It consists of a diaper of large flowers, of a very dark red colour. The flowers were not disposed with any very great care to keep them in horizontal lines or at equal distances. How far the pattern extended could not be ascertained; the most considerable remaining portion of it was on the east wall. A third series of painting consisted of texts in black letter, with ornamental borders of Jacobean character.

In the ruined and since destroyed church of St. Mary Magdalene, Doncaster, there were traces of decorative painting on the Norman arches of the nave. The cushion capitals were relieved with red, and there were scroll patterns round the chancel arch and other arches, of which a drawing is given in the plates of a work on the church by the Rev. J. E. Jackson.†

CHAPEL OF THE RUSSIAN EMBASSY, WELBECK-STREET.

THIS chapel has lately been rebuilt, under the direction of Mr. James Thomson, architect. It has some points of special interest, not only on account of being one of the only two places in the metropolis devoted to divine service according to the Greek ritual, the other being in London-wall; but also in a class of architecture of which we have fewer examples than of most others.

The style is Byzantine, and the distinctive feature it aims to embody, is that of firmamental expanse, as contradistinguished from the flat ceilings of the Latin or pointed roofs of Gothic churches. This is effected by means of arched ceilings throughout, the centre having a domical roof or cupola superimposed upon a polygonal tambour. It is true all this is attempted on a small scale, it being a sort of private chapel belonging to the embassy; but it is not without its results, and the initiative is due to a suggestion received from St. Petersburg. Mr. Thomson has embraced the idea, and contrived to manage both the practical difficulties of a confined position and space, with the obligations of the Metropolitan Building Act, and also in details to work out features which characterise the style.

The chapel consists of a parallelogram, not exceeding 50 ft. by 24 ft. including walls, and of a height varying from 20 ft. to 40 ft. The length is divided into three compartments, of which two are devoted to the auditorium, and the third, formed into an apse, is limited to the sanctum. This latter is raised and approached by three circular steps, on each side of which is a small platform for the choristers, the whole being enclosed with a dwarf metal railing. Between this and the altar is erected an ornamental screen formed of solid masonry, with carved mouldings and marble pillars, having alabaster caps and bases: this, while on the one hand it represents the veil of the temple, separating the body of the chapel from the "Holy of Holies," serves also as an Iconostasis, not for *sculptured* images, but for *paintings*, which are the production of Russian artists of considerable talent. They are chiefly reduced copies of some of the most celebrated pictures in the Cathedral of St. Izaak, and in the chapel of her Imperial Highness the Grand Duchess Marie, who has taken great interest in the work.

The pictures in niches severally represent the Saviour, the Virgin, St. Nicholas (the patron saint of Russia), St. George, and the archangels Gabriel and St. Michael, and in the crowning panel of the screen is a picture of the Holy Supper, after the eminent Russian painter, Bruloff. The centre of the screen has elaborately-carved and gilt folding doors, the panels of which are filled with small paintings of the four Evangelists and the Annunciation of the Virgin. The base of the screen has mosaic panels formed of alabaster, marble, and polychromatic tiles.

On the flank walls of the chapel, are to be placed pictures representing St. Mary Magdalene and St. Alexander. The whole of the paintings and screen are the gift of H. Basil Gromoff, a Russian gentleman of high position and esteem in St. Petersburg. Behind the screen doors, will be the customary curtain of damask silk, which, when drawn aside, displays the sacred altar and its insignia.

The Russian mode of worship being wholly a standing or kneeling service, there are no pews or stall seats provided, but a plain solid oak bench skirts the side of the chapel for the use of those worshippers whose age or infirmity may claim that relief.

The cupola is constructed of iron, and contains twelve lunettes 5 ft. high, in which it has been suggested to have glass paintings, representing figures of the four great prophets, Isaiah, Jeremiah, Daniel, and Ezekiel, and eight of the minor prophets; above these, in mural painting, heads of the twelve Apostles, upon gold discs. The ventilation is effected by an aperture 2 ft. in diameter, in the centre of the cupola, the covering of which is acted upon by a balance-weight connected with a coronal or chandelier for lighting the chapel.

The chapel, could it have been seen, would have assumed an architectural exterior; but as it is placed in the rear of the residence of the Very Rev. Eugène Popoff (the priest), that has not been attempted. It is approached through the house by a corridor and circular vestibule, terminated by an arched doorcase of freestone, for which a pair of elaborate and massive bronze gates have been prepared. It is ultimately proposed to erect a suitable porch in Welbeck-street, to identify the entrance to this place of Russian worship. The interior of the building is in progress of painting and decoration, from drawings prepared by Mr. Thomson, jun., under whose personal superintendence they will be carried out, so that the chapel may be ready for service at an early day.

The building is provided with a hot-water apparatus for warming, by Messrs. Bailey. The bronze gates are by Mr. Potter, the iconostasis by Mr. Field, and the rest of the work by Mr. Howard, the builder.

* Similar dedication crosses have been found elsewhere, and of different dates—*e.g.*, at St. John's, Winchester; Wiston, Suffolk; Coggeshall, Essex, &c. all of the same pattern and colours

† To be continued.

WATER SUPPLY FOR PARIS. The municipal authorities in Paris are just about to undertake the supplying of the city with pure water. To this end a reservoir, capable of supplying 40,000 cubic feet of water every twenty-four hours, is now being constructed at Menilmontant, at an expense of 40,000,000 francs. The water is to be brought from the Marne.

ARCHÆOLOGICAL MEETINGS.

Somerset Archæological Society.—The sixteenth annual meeting of this association was held at Burnham on this occasion. A temporary museum was opened, but the collection was of a very limited character. An interesting contribution was sent by the Rev. J. Yatman, of Winscombe-hill. In pulling down the walls of Rowberrow Church, which were in a dangerous state, the remains of an old churchyard cross were found, of the very oldest type of architecture found in Britain, resembling the intertwining serpents' tails which are found in monuments only of Irish, or Manx, or Welsh origin. These remains are said to be nearer to the well-known urn at Carew Castle, Pembrokeshire, and of the date of 800 or 900, or even earlier, resembling the Scandinavian carvings of a later date, and very much resembling the Mexican antiquities discovered by Stephens and others in Central America. They are ruthlessly cut up by restorers, who, in the sixteenth century, "restored" this church. The carvings were curious, and attracted some attention. The proceedings of the day commenced with the annual business meeting, after which, the Rev. T. Hugo read a paper "On the History of the Religious House of Whitehall, at Ilchester," and Mr. Serel one "On the Wellesley Family and Somersetshire," written with the view of showing that there was good ground for believing that the family of the Duke of Wellington was connected with Somerset, and especially with Wells. "The Duke" had a farm in the county, took his title from Wellington there, and always spoke of himself as a Somerset man, though born in Ireland. Mr. Roach Smith read an address upon the antiquity of man, illustrating his remarks by drawings of the head of the *Bos Primigenus* and flint implements, bones found in some caves at Tenby, and by quotations from the works of many eminent writers. In the middle of his address the company rose to visit Burnham Church, Mr. Smith to finish his paper at the evening meeting. On arriving at the church the party inspected the various parts of the building, and explanations were given by Mr. E. A. Freeman, the Rev. T. Hugo, and Dr. Giles. At the evening meeting Mr. Smith concluded his paper, and there was some discussion on it. Next day an excursion was made by sixty or seventy of the party to South Brent Church, Brent Knoll, and East Brent; also to Lympsham Church, Mr. Freeman and other gentlemen describing the buildings. Brean Down was then visited. On the return it was intended to visit the churches of Braen and Berrow; but the lateness of the hour and approaching darkness prevented this being done. In the evening some papers were read; and on the following day a second excursion took place, when Burtle, and the sand banks, the Abbot's Way, Wedmore, Mark, and other places, were visited.

Beds Archæological and Architectural Society.—The members of this society made their usual summer excursion on the 25th ult. The starting point was Marston Station, and the party visited the churches of Millbrook, Steppingley, Flitwick, Westoning, Flitton, Maulden, and Houghton Conquest.

Bucks Architectural and Archæological Association.—The annual excursion and meeting of the members of this society was held in the district including Waddesdon, Quainton, Denham Court, and Doddershall. The "meet" was at Waddesdon Church, where a restoration has lately been effected. The annual meeting was held in the hall of Doddershall House, where a paper on Doddershall was read by the Rev. C. Lowndes, who also read a paper by the Rev. W. H. Kelke on "Ancient Stone Crosses," with especial reference to those in the county of Buckingham. Stone pillars (Mr. Kelke observes) bearing the figure of the cross, appear to have been occasionally in use among the unconverted Romans; but in such cases it is generally apparent from the devices on them, or from other indications, that they are of Pagan extraction. Christian crosses may be divided into the three heads of churchyard, wayside, and market crosses. The churchyard cross is probably the earliest form known in Britain. The first missionaries usually erected a cross to mark the place where they assembled the congregation; and these places, being inclosed by a wall or ditch, constituted open-air sanctuaries. Churches were often built within these inclosures; but even after the first wooden crosses had decayed, others were erected, sometimes two in the same churchyard, either to afford additional kneeling-room, or being special

memorials of eminent persons, or perhaps dedicated to some particular saint. Some were not more than 3 ft. high: others towered above the church. Some were quite plain; others richly ornamented. Buckinghamshire still possesses remains of these crosses at Hillesden, Wing, Boarstall, Mursley, and Dinton. Market crosses, as they are commonly called, were erected during the Mediæval period in every town, and almost every village, in some conspicuous place. The paper was illustrated by several drawings of crosses in various parts of the country, by E. J. Payne, of High Wycombe. A discussion took place on the subject of the paper.

The Rev. W. F. Norris then read a paper, by the Rev. H. Roundell, on "The Civil War in the Neighbourhood."

SUSSEX SQUARE AND SUSSEX GARDENS.

IN these days of thoroughfare reform, it is singular to find, in a fashionable neighbourhood, two localities greatly needing a touch of the improver's wand, so strangely passed over from year to year, as Sussex-square, Hyde Park, and the road from Sussex-gardens eastward.

In the former, from some antiquated prejudice, iron gates have been allowed to obstruct the principal entrance into the square (and the readiest access to all the adjoining streets and squares) from the park and the high road. Surely it is time for people to become more liberal in their ideas, than to imagine they have any right, for their own private convenience, to hinder the accommodation of some hundreds of their fellow-creatures. By this gate being closed, the inhabitants of numberless surrounding houses, including those of Sussex-square itself, have to drive every day out of their way, either to the right-hand or to the left, to get into the park and the Oxford-street road.

Just now, the offensive gates are out of repair, having been partially thrown down, probably by some cart driving against them. They are half-boarded up, and look most deplorable. *Now* would be the time to urge their removal, before any money or trouble is spent upon restoring them. Surely the *Builder*, which is so powerful in reforming abuses, can raise its trumpet voice, and blow a blast strong enough to sweep away this useless obstruction to circulation.

The second reform needed in the neighbourhood is, as I have said, in the road leading from Sussex-gardens eastward from Westbourne-terrace.

On one side of it lies Cambridge-terrace, and on the other Sussex-terrace. Between these two rows of houses run *three* roads, *four* footpaths, and *two* narrow strips of shabby, mangy, disreputable-looking garden. The gardens are never fit to be seen, being too narrow for any other purpose than as receptacles for orange-peel, waste paper, stray straws, old bottles, and such like: the foot-paths are narrow and ill-paved,—two of them; and two are gravelled and are very wretched to walk upon: the central road is not sufficiently wide for the traffic upon it; and the two supplementary side-roads are solely for the convenience of the two rows of houses, being blocked up at intervals by iron railings. A public thoroughfare is for the use of the public, and must not be treated as private property. When this part of town was laid out, and population was scanty, it mattered little how the road was filled; but, now that we elbow our neighbours on all sides, as much space as possible must be given us, or we shall fall out and fight.

The alteration I propose seems very feasible, and could scarcely be costly. First, the iron railings on each side of the "mangy gardens" are to be cleared away; and as there must be about a mile of them in all, they being four rows deep, they might be sold, and the proceeds would help to defray the expense of the alterations. Next, every tree, and every stick that can now, or may some day, claim to be a tree, to be carefully preserved; but all ragged bushes and shrubs to be cleared away; the ground under the trees to be levelled, and either flagged, laid with asphalte, or gravelled, as may be thought best, to form pathways, in exchange for the two footpaths now bordering the central road, and which are to be thrown into the road to widen it, as required. There would still be a spare slip of ground from the gardens, that would serve to widen the two side-roads, which must be opened all along and made available for general traffic; and they, in their turn, could then spare a few inches to the paved footpaths under the houses, to render them a convenient width for foot-passengers, which they are not at present. The whole road would then have somewhat the appearance of the foreign boulevards, and it would be quite a novelty—and a very charming one, too—amongst English streets. If well carried out, it would no doubt start a new fashion in what may be termed our landscape-street-gardening.

AN OLD INHABITANT OF PADDINGTON.

WORKING MEN'S SHAKSPEARE MEMORIAL.

A MEETING of working men was held on Monday evening last, at the Whittington Club, for the purpose of bringing before the public the scheme set on foot by the working men of London, to erect a memorial of Shakspeare, on Primrose-hill. Mr. R. Moore was called to the chair. Resolutions approving of the steps taken, and appealing to the public for subscriptions of 1d. and upwards, were proposed and seconded by Mr. Bainbridge, Mr. Linnæus Banks, Mr. Dunning, Mr. Howell, Mr. Wheeler, and Mr. Hoppy, and carried unanimously; Mr. H. Marston, Mr. Godwin, and Mr. George Cruikshank, at the invitation of the committee, supporting the several propositions. We cordially approve the proposition, and hope to see it carried out satisfactorily. We will take an early opportunity to recur to the subject.

STATE OF THE RIVER WENSUM AT NORWICH.

THE city surveyor, Mr. T. D. Barry, C.E., has reported to the local Board of Health on this subject. The report says as to the river:—"It is my decided opinion that, so far as it is subjected to the reception of sewage and other fluid or deposited matter, it is *thoroughly* and *irremediably polluted*, presenting all the features of a large sewer, without any available means of being cleansed. . . . . Next, with regard to the cause, it chiefly consists in the deposits of mud and inorganic and insoluble matter in the bottom of the river from sewers and other sources, and in the products of those deposits. . . . . Feeling most confidently that no efforts short of taking the whole of the offensive matter away from the river will satisfactorily remedy the present evil, I consider it my duty to recommend the council to provide two intercepting sewers, of sufficient size to receive the whole sewage, &c., of the district, and to carry the same to the marshes into proper depositing tanks prepared for that purpose. I am now engaged on the plans and levels of the two routes which I have in contemplation."

The report is accompanied by another report by Mr. F. Sutton, F.C.S., London, on the chemical nature of the pollution of the river from various factories, &c.; and the reporter also states that the only remedy is to divert the sewage from the river, which is a sluggish one, the channel and banks of which are grossly polluted as well as the water itself.

OLD VERULAM.

A WALK of half a mile along the banks of the Ver will conduct our visitor, by way of the boat-house, to the ruins of Verulamium. Built as the city was on the old Watling-street which led from London to the north, it is not to be wondered at that, even in the desolation of their present ruined state, they bear on their fronts abundant testimony that they were erected at a date as early as the commencement of the Christian era, though any inquiry, as to their locality, addressed to the country people, is generally met by a vacant stare of wonder and ignorance, which shows that our English rural population is far less poetical than practical. But alas! when we arrive at Verulamium, how shattered are all our previous bright imaginings. The red brick carcases of five small cottages and those huge masses of grey stone all overgrown with ivy, do these constitute all that remains of that once great Roman town? Did Caius, and Lucius, and Publius, and Marcus, and Quintus, inhabit these miserable hovels? The floors are overgrown with weeds: the walls are dilapidated and roofless; yet still it is somewhat strange to remember that the Romans, whom we know only in history, were actually living men and women when these walls were built, just the same as we who now look at them, after nearly two thousand years, are living men and women. And perhaps that archway in the long wall attracted the eyes of Julius Cæsar in the same way that it now attracts the eyes of Mr. and Mrs. John Smith. It is almost needless to add that Roman coins and pieces of tesselated pavements have been found in Verulamium in great abundance, and that antiquaries have discovered *in situ*, close to St. Michael's Church, the entire outlines of a Roman amphitheatre. These remains were opened some few years since under the auspices of the St. Alban's Archæological Society, but, having lain open for some time, were filled in again. Perhaps the day will come when we shall see exhumed the ancient Thermæ, and the floors of Roman mansions, as has been the case at Wroxeter; and let us hope that if such a day should come, the necessary researches may be carried on with equal public spirit and equal success.—*Once a Week.*

ACCIDENTS TO PROPERTY AND PERSON.

WE have a considerable "chapter of accidents" to record this week.

At Barking Creek, a stonemason employed at a stone-preparing yard was engaged in raising a stone 10 ft. long, and weighing *two tons*, but failed to put a particular support under it. Finding that it was falling, he put his back under it to keep it up, but he was instantly crushed to death beneath its weight. His ribs were broken and driven into his lungs, and, according to the medical evidence his body was "smashed to atoms." The foreman of the works was also knocked down by the stone, and with difficulty escaped with life. The coroner's jury returned a verdict of death by misfortune.

In Lime-street Ward, where a serious fire has occurred, the walls of a building fell in while the firemen were engaged in extricating iron safes from the premises. Fortunately they had just brought out one, and thus escaped otherwise certain death.

The Lewisham chalk-cutting accident has resulted in a verdict—"That the deceased men lost their lives by an accidental and unforeseen fall of earth on the line of railway between Deptford and Lewisham; and the jury wish to express their regret that, on this occasion, no inspection was made of the top by the foreman or ganger, to ascertain the true condition of the work, or if any danger existed."

At Weaman's-row, Birmingham, a perilous accident has occurred in the removal of between twenty and thirty old houses, to make way for an extensive range of new shopping. The back wall of a number of these houses was left standing, as it formed a boundary. Against this wall was some shopping which was used as stamping shops. The foreman of the works had scarcely given orders for the cessation of work, at the dinner-hour on Saturday, and the men had only moved a few yards from the spot, when the boundary wall fell. The whole length of wall had fallen inwards, bringing with it the range of shopping erected against it. Had the accident occurred a few moments earlier, several men would in all probability have been killed; or had it taken place a few minutes later, a number of boys, playing among the newly-made foundations, would doubtless have been severely injured by the *débris*.

At Friar's-green, Warrington, a great portion of a factory premises has fallen. The building was six stories high, but it had not been occupied as a factory for fifteen years. About twelve months since it was occupied as a store warehouse, but, it is said, not heavily loaded. The whole building will require to be re-erected. The accident occurred during the night, when no one was in the building, in which about a dozen men usually worked. A telegraph pole had been affixed to the top of the building the day before.

At Liverpool a female penitentiary, in Mason-street, Edge-hill, has been destroyed by fire. About forty or fifty inmates were with difficulty rescued. The fire is supposed to have originated in the laundry, where clothes were drying through the night.

The Castlegate Church of St. Mary, at York, has been struck by lightning, which travelled down the conductor the whole length of the steeple, passed thence from *a breakage therein* into the stonework of one of the buttresses, breaking and to some extent displacing it, but

doing no material damage to the edifice. It seems then to have entered the church and broken one of the windows, and in a singular manner to have lifted one of the bricks of the floor, and removed it some short distance. As the church is very old and dilapidated, considerable apprehension was excited as to the safety of the steeple, which, however, is reported to be unharmed.

At a smithy, near the Bradley Colliery, there has been an explosion from gunpowder, which killed the blacksmith, who had actually kept a chest of gunpowder in his smithy, and within reach of the sparks from his forge! A witness at the inquest stated that "deceased was filing a red-hot iron bar, and the sparks were flying in the direction of the iron chest which contained the blasting powder," which at length exploded. The butty's son who had the powder removed into the blacksmith's shop, was informed by the coroner that "a little more evidence would have warranted his committal to Stafford to be tried for manslaughter."

THE NEW BANK IN HUDDERSFIELD.

THE West Riding Union Banking Company have taken down the old banking-house in Huddersfield, on account of its insecure condition, and erected on its site a new building for their business. Mr. Cocking was the architect. The general character of the structure, which stands in the market-place, is of the modern Italian style. The ground or principal floor has six fluted pilasters, with carved Corinthian capitals and Aberdeen granite columns, and a carved and moulded entablature, upon which rest the podia of the five first-floor windows. This story is composed of panelled pilasters, with carved capitals, and stonework suited to the design. The second floor has five elliptical arch-headed windows. The whole is surmounted by a modillion and dentilled cornice, upon which rests a balustrade divided into compartments by pedestals and vases. The masonry is executed in white ashlar. The entrance is through a vestibule laid with Minton & Co.'s encaustic tiles. The banking-room is 40 ft. by 24 ft., and 16½ ft. high. The ceiling is finished with eight compartments or sunk panels, with ornamented cornices, oval centre flowers, and relieved with colour. There is a private room leading to the board-room 18 ft. by 16 ft., with cloak-room, closet, and lavatories on the ground floor. The strong-room is 14 ft. by 12 ft., and 16 ft. high, with solid ashlar walls, with firebrick floor and ceiling, with intermediate perforated iron floor and shelving. The iron doors to this room are case-hardened, and secured with Price & Co.'s thief and powder-proof locks. All the windows on the ground floor are fitted with Bunnett & Co.'s patent iron revolving shutters. The ground floor and floor over bank-room are fireproof—wrought-iron beams and firebrick arches. The following were the contractors for the works:—J. & W. Radcliffe, masons; J. Christie, joiner; H. Garton, plumber and glazier; D. Tunnacliffe, plasterer; Manvers & Ingle, of Leeds, stone carvers; G. Brighouse, painter; W. Goodwin & Sons, slaters; R. Armitage & Co., ironfounders; G. Schofield, smith's work; mahogany fittings, by W. H. A. Roebuck. The whole of the works have been carried out under the superintendence of the architect.

THE BUILDING TRADES MOVEMENT.

Chester.—The strike of joiners, plasterers, and labourers in Chester still continues, the employers rigidly adhering to the determination not to yield to the demands of the men, and the men being unwilling to accept the masters' propositions. Meetings have been held by both parties, but apparently without any satisfactory result. At a meeting of the masters and the delegates of the workmen, the deputation on behalf of the men stated that they were willing to resume their work conditionally, viz., that the half-day be granted them on Saturdays in six weeks from that date. The employers, however, finally determined not to yield to anything but a three months' notice, and issued the following resolutions:—"That we, the employers of the building trades, give to the operatives the half-holiday at one o'clock, and that half-holiday to commence in three months from the date the operatives accede to these terms."

Hartlepool.—As was anticipated, after the master builders had acceded to the demands of the masons at West Hartlepool, by giving them an increase of wages, the Irish labourers and others who assist the masons have now struck for a rise of 2s. per week. Of late their wages have been 20s. It was said the masters will have to give the advance, as there is a scarcity of labourers in the district.

Reddish.—Government have expressed their desire to co-operate with the local authorities in endeavouring to discover the accessories to the late murderous assault by brickmakers on Thos. Wild at Reddish, and have accordingly offered a reward of 50*l.* to any person who shall give such information as will lead to the conviction of any of the four men concerned, and who are still at large, as well as a pardon to any accomplice, excepting either of the two already in custody, giving like evidence.

THE SEWAGE QUESTION.

REPORT OF THE COMMONS COMMITTEE.

HAVING fairly and fully established a public opinion in favour of sewerage, house drainage, and water-closets, sanitary reformers must now turn their attention energetically to the cleansing of our rivers, and the final disposal of town sewage as manure upon the land, since no other way out of the present difficulty presents itself. The efforts of sanitary reformers are now reinforced by the result of the examination of a great many witnesses, and of much consideration, on the part of the select committee of the House of Commons, during the months of May, June, and July last, on the various plans proposed for dealing with the sewage of the metropolis and other large towns, with a view to its utilization in agriculture. The report says:—

"Your committee have come to the conclusion that it is not only possible to utilise the sewage of towns, by conveying it, in a liquid state, through mains and pipes to the country, but that such an undertaking may be made to result in pecuniary benefit to the ratepayers of the towns whose sewage is thus utilised.

The benefit may, in a few years, be greatly increased; for the amount of artificial manures is even at present insufficient, and the sources whence some of the most important are obtained will, in a few years, be exhausted. Other means of fertilising land must therefore be resorted to.

Your committee, having examined the chairman and engineer of the Metropolitan Board of Works, are of opinion that more might have been done by that Board towards the profitable use of the sewage of London; and that the completion of the outfall sewerage of the Metropolis ought, at the earliest possible moment, to be followed by the adoption of a system which may convert that sewage from a nuisance into a permanent and increasing source of agricultural fertility.

There can be no doubt as to the injury which results from the practice of conducting sewage and other refuse matters into the rivers, from whence numerous towns, villages, and country populations derive their water-supply.

It is imperatively necessary that such a practice should be discontinued. No efficient artificial method has been discovered to purify, for drinking and culinary purposes, water which has been once infected by town sewage. By no known mechanical or chemical means can such water be more than partially cleansed: it is always liable to putrefy again. Processes of filtering and deodorisation cannot, therefore, be relied upon to do more than mitigate the evil. Water which appears perfectly pure to the eye is sufficient, under certain conditions, to breed serious epidemics in the population which drinks it.

If the sewage of towns is no longer to flow into rivers, the only alternative which remains is to dispose of it on the land.

The removal of house refuse to the land would now be much easier and cheaper than it was formerly, because carriage by suspension in a liquid is the cheapest mode of transport.

Dwelling-houses in the metropolis and many parts of England have already been freed, which has caused the increasing pollution of rivers. This latter evil is becoming worse every year in proportion to the adoption of a better water supply, of a more perfect system of house drainage, and the increase of the population. Dr. Acland and other witnesses believe that rivers can be effectually freed from pollution only by extending the Local Government Act to entire watersheds. They furthermore hold that it should be the duty of the Home Secretary to see that the law as to the pollution of streams is strictly enforced by these Watershed Boards.

We recommend that the important object of completely freeing the entire basins of rivers from pollution should be rendered possible by general legislative enactment, enabling the inhabitants of such entire districts to adopt some controlling power for that purpose; but it should include a provision for compelling Local Boards to render the sewage of their districts innocuous by application to the land for agricultural purposes. The case of the valley of the Thames (where the purification of the river, which has been sought by the expenditure of enormous sums, is to a considerable extent, counteracted by the increased discharge of sewage from towns higher up the stream) requires special and immediate attention."

Engineers of great experience and reputation combined in explaining the machinery required for the purposes in view, and the charge likely to be entailed. Not only was there nothing impracticable in the process, but nothing forbidding in the expense. The work could be done even at the present time with an actual profit rather than a loss on doing it; and as the demand for the manure became greater, and the system was improved, the profit would be materially enhanced. The committee, indeed, are of opinion that the great metropolitan drainage scheme must be regarded as defective in so far as it omits the utilization of the sewage, but that this imperfection can probably be remedied without much difficulty when once the demand has been established, and the system of supply arranged. The first object should be the discontinuance of mischief. If it be found that the ratepayers of a town experience a pecuniary benefit in addition to a sanitary gain, so much the better; but the first thing is to restore our streams to their natural purity, whether without positive money profit, or even with an actual money loss, which latter, however, there seems to be no reason to fear.

FROM IRELAND.

Sligo.—At a special meeting of the Town Council, Mr. Haighe, the architect, whose plan for a new town-hall has been selected, entered into a minute explanation of the details of his plans, and concluded by expressing his opinion that the building could be erected for 5,000*l.* After some conversation, a building committee was appointed to collect subscriptions and confer with the architect. Mr. Doherty said that the mayor should write to Sir John Benson respecting Sir John's professional charges. The mayor said that Sir John was engaged professionally, but doubtless, was aware that there are no funds to pay him at present. There was a vote of thanks passed to Sir John.

County Down.—The committee appointed by the late Grand Jury of the County Down to arrange as to the erection of a new district Hospital for the Insane, have held a meeting for the purpose of considering the tenders of the several contractors for the erection of the proposed hospital at Downpatrick, and the various alterations suggested by the local authorities on the plans of Mr. Smith, the architect of the new institution.——The Downpatrick Gas Company have declared a dividend of 6 per cent. for the last year.

Drogheda.—The local *Argus* complains that, although Mr. Whitworth has subscribed 9,000*l.*, being one-half the probable cost of waterworks for Drogheda, while the remainder is forthcoming from other sources, leaving only about 4,000*l.* to be subscribed; and although the Act for carrying out the works has been obtained; still the whole affair seems to be now in abeyance.

FROM SCOTLAND.

Glasgow.—An underground railway on the London plan has been projected in Glasgow. The intended line will be nearly 7 miles in length, and by branches to the harbour and otherwise, will have a large amount of goods and mineral traffic. It is urged that the construction of a line running east and west through the city will afford a ready outlet to the populous and fast-increasing suburbs, and enable many to live in these suburbs who are now confined to the more densely-built parts of the city. The course of the proposed line will also admit of branches being thrown out to connect the north and south railways, and likewise, if circumstances invite, the formation of a central terminus.

Cathcart.—The foundation stone of a new place of worship in connexion with the Free Church—the first in the district has been laid at Cathcart. The church is being built on the right of the public road leading from Glasgow, within some minutes' walk of Cathcart village, and also within comparatively easy access from Mount Florida and other rising suburbs. It is in the Early English style, and remarkably plain in detail. The plan is cruciform, the east end having an apsidal termination, and the west being surmounted by a timber belfry. The interior will be fitted up with wide passages and pews. The pews rise considerably towards the end, and the gables of transepts, and the floor of the pulpit, will only be raised about 3 ft. The church will be seated to accommodate about 500, but provision will be made for the erection of galleries in the transepts hereafter if required. The session-house and vestry are to be at the west end. The architect is Mr. Honeyman, of Glasgow; the contractor, Mr. A. Fraser; and the clerk of works, Mr. J. M. Robertson.

Kelso.—The works connected with the town

drainage and the introduction of water from the Tweed, the first of which has been, at intervals, in operation for nearly two years, have now been completed. The plans for both were supplied by Mr. Brunlees, of London, C.E., a native of Kelso. The drainage works will cost upwards of 4,000*l.*, while the cost of the introduction of the water is estimated at about 3,000*l.*; the half of which latter sum is, however, to be saved to the burgh by a donation of 1,500*l.* from the Duke of Roxburghe. The supply of water is taken from the Tweed at a point near the head of the town, where it is pumped up by a force-engine into a tank capable of containing upwards of 60,000 gallons, whence it is distributed through the town. Regarding this source of supply, some dissatisfaction prevails. The pipes are taken into the Tweed on the Kelso side of the river, and it is supposed by some that they have not been laid far enough into the bed of the river, so that it is feared that the water will not be received so free from the river-side impurities as is desirable.

Railways in the Highlands.—The Highlands and Islands of Scotland are now within twenty-four hours' distance from London, whence so many now make a run to the far north in summer. There is every prospect, it appears, that before the close of another year there will be an iron road literally from the Land's End to John o'Groat's. By the extension of the Aberdeen and Inverness Junction and the Inverness and Perth Railway from Perth, where they both converge, there is direct communication with Dingwall and Tain, the two principal towns in Rossshire; and it is now proposed to carry forward the coast line on the one hand to Wick, and to make a new line from Dingwall direct on through the western district to the Isle of Skye. The eastern line will bring the great fisheries of the Caithness coast into proximity with all the southern markets, while the western line will open up the whole of the West Highlands, and enable the sheep farmers and graziers to send their stock to London and intermediate towns. The fisheries of Skye and the West Highland lochs will also be developed by this new means of conveyance. The principal portion of the required capital has already been raised, and chiefly by the landlords through whose property the lines will pass. The estimated cost of the railway is under 6,000*l.* a mile. All the railways in the north of Scotland are single lines, but have hitherto been entirely free of accident.

PROVINCIAL NEWS.

Beckenham (Kent).—A great many houses of respectable appearance have been built, and are now building, in this parish. Those now in course of construction on Fox Grove Farm are on the spot, or very near to it, on which, three centuries since, potatoes were first cultivated by Sir Walter Raleigh, whose residence was close by where Fox Grove Farmhouse now is. A great part of the moat which once, in all probability, surrounded it, still remains.

Ledbury (Worcestershire).—It is in contemplation to erect a corn exchange in this town, on a site in the High-street occupied at present by houses. Mr. J. Hartland, land agent, has had plans prepared, and a limited company is to be established. The front of the design is of a composite character, the Gothic style prevailing, with a roof somewhat after the manner of the Louvre. There will be two windows on the ground floor, with shafts of red granite, surmounted with Corinthian capitals in Bath stone, and two windows on the upper floor. The front will be of brick, dressed with Bath stone, to be carried up in three pointed gables, the middle one doing duty as a clock tower. The elevation from the street to the crest of the roof will be about 55 ft. The cost of purchasing the site and erection is estimated at about 2,500*l.*, which it is proposed to raise by a capital of 3,000*l.* in 300 10*l.* shares.

Beverley (Yorkshire).—The construction of the new cattle-market will be completed in a short time. It occupies a site in Morton-lane, and is in close proximity to the railway station. The market is inclosed on the east side of a wall, and the several main and intersecting roads, which are nearly finished, have been prepared with chalk foundations. The drainage is nearly complete, and the posts and inclosure for the pens are now being erected, provision being made, according to the original plan, for about 500 head of cattle, and upwards of 3,000 sheep. The cost of the land amounted to about 1,000*l.*, and the estimate for construction expenses was about 2,000*l.*; making a total cost of—say 3,000*l.*

Jarrow (Durhamshire).—A new mechanics' institute has been opened at Jarrow. The building was intended to serve the various requirements of the people as a mechanics' institute, with its necessary adjuncts,—a public lecture-room, and a coffee and reading room. Mr. Charles M. Palmer headed the list of subscriptions with 500*l.*; Sir Walter James gave a site for the new building, in Ellison-street, at a merely nominal rate; and Lady James promised to bear the expense of fitting up a public clock in the tower of the building. The plans for the new building by Mr. A. Dunn, architect, Newcastle, were selected; and the foundation-stone of the new edifice was laid by Mrs. Palmer. The building is entirely of brick, in the Elizabethan style, which has been modified so as to give abundance of light. The building, which is of two stories, is about 100 ft. in length by 34 ft. in width. The entrance-hall stands out 11 ft. beyond the line of the rest of the building, and it is carried up, forming the basement of the clock-tower, which rises to a height from the ground of 150 ft. The ground-floor of the building is divided into two by a wide passage, running from the entrance-door right across the building. To the left of this passage is a room, 41 ft. by 42 ft., which will be occupied as a public reading-room and refreshment-room; and behind it is the kitchen, filled with all the requisite utensils. The portion of the building to the right of the passage has been divided into three rooms,—a library-room, 18 ft. by 34 ft.; a public-room, 20 ft. by 16 ft.; and a committee-room. The lecture-room occupies the whole length and breadth of the building. At the south end is a sort of stage, with retiring-rooms adjoining. The gas-fittings of the room consist of three lights, each carrying forty burners. Above the flat rises the clock and bell tower. The clock was fitted up by Mr. Cook, of York. The bell was supplied by Messrs. Warner & Sons, of London, and weighs 16 cwt. To the rear of the building are hot and cold baths, with other conveniences. The builder is Mr. Kennedy, of Jarrow. The total cost of the building is about 2,000*l.*, of which only 1,200*l.* have yet been obtained.

CHURCH-BUILDING NEWS.

Watford.—The church of St. Andrew (New Town), Watford, having become far too small for the rapidly-increasing population of the district, it was resolved to enlarge the building by the erection of a south aisle, and thus to provide additional accommodation for upwards of 200 persons. The estimated cost of the alteration is 1,000*l.*, but the amount of the subscriptions already given or promised shows that there will not be much difficulty in defraying the expense. The contract of Mr. G. Allen, of Watford, builder, was accepted, the architect being Mr. T. Bury, who superintended the building of the schools. The improvements now being made have long been needed.

Bury St. Edmund's.—St. James's Church, which has recently been restored under the direction of Mr. G. G. Scott, has been re-opened for divine service. The principal feature of the restorations is a new oaken roof, which consists of nineteen pairs of principals (corresponding in number with the pillars on each side of the nave), hammer-beams, wall-pieces, moulded collars, purlins, ribs, and ridge-braces. The cornice consists of six enrichments,—viz., 1st, a plain moulded wall-piece; 2nd, three designs of ribbon and ragged staff mouldings; 3rd, embattled moulding; 4th, Strawberry-leaf ditto; 5th, pierced trefoliated moulding. The strawberry-leaf moulding is continued round the hammer-beams, and every alternate one has a carved angel, supporting an emblematic shield, bearing the devices of St. James and St. John, to both of whom we believe the church is dedicated, such as the pilgrim's staff and wallet, the cockleshell, &c. The spandrels between the collars, king-posts, and ridge, are also filled with tracery of varied design. The clerestory windows, six-and-thirty in number, have all been re-filled with designs in Messrs. Heaton & Butler's stained glass. The gable at the east end is partially filled with a three-bayed window, given by the executors of the Rev. G. J. Haggitt, the late incumbent, which is to be filled with stained glass as a memorial of Mrs. Haggitt. There was already a memorial window to Mr. Haggitt in the chancel. After the new roof had been finished the committee obtained leave to take down the west gallery; and after two or three months the same fate awaited the north gallery and all the pews on the floor of the church. The whole of the stonework was thereupon cleaned and restored, and the interior walls stuccoed throughout. In many places the botels were cut entirely through to receive the memorial tablets on the walls, which have been re-fixed in other positions. The whole of the old pavement and soil of the church have also been cleared away to the depth of one foot, and an entirely new floor has been laid, the aisles being covered with Minton's 4-inch black and red tiles, whilst battened flooring has been laid beneath the sittings. A clear space has been left around each of the pillars of the nave, and also laid with Minton's tiles. The sittings themselves consist of oaken benches, with carved open ends and close-boarded backs. With respect to the exterior of the church the east and west gables have been carried up to the height of the high-pitched roof, with new coping and stone crosses, &c. The roof is covered with green Welsh slate, and above the great west window is a stone niche corresponding with those on either side of the doorway. The whole of the restorations have been effected under the direction of Mr. Scott, who has been represented by his assistant, Mr. J. D. Wyatt. Mr. Darkin, of Bury, has acted as general superintendent of the works. A restoration of the organ having been decided on, the contract for the work was taken by Mr. J. Last, and the instrument has been re-built by Mr. J. W. Walker, of London, at a cost of something like 700*l.* The total expense has been very nearly 5,000*l.* The old gallery and pews produced 100*l.* The contract for the first portion of the roof was taken by Mr. Farrow, at 1,290*l.* 1s. 4d., and the second half at 1,197*l.* 10s. 4d. The benches were contracted for by Mr. Tooley, at 700*l.* The tiled portion of the floor has cost 289*l.* 2s. 6d., and the boarded portion and joists, 209*l.* 17s. 6d.; the scraping and stuccoing, 186*l.* 11s. 4d.; the two buttresses supporting the chancel arch, steps to chancel, refixing of monuments, making good the columns of the nave and other stonework, additional tile flooring round the columns, and sundry other work, about 400*l.*; stonework for window over the chancel arch, 110*l.*; the lobby, 80*l.*; concrete for floor, 60*l.* The total receipts were about 3,611*l.*, leaving a deficiency of something like 1,400*l.* to be met.

Leintwardine.—The ancient church of St. Mary Magdalene, Leintwardine, is to be restored, according to the *Hereford Journal*. The roof is in a bad state, and in the windows the stonework is going to decay. It was proposed that the whole should be surveyed by Mr. Nicholson, architect, of Hereford, and that advertisements for tenders to do the work should be made. A subscription was immediately entered into, and about 90*l.* were subscribed, the parish agreeing to pay 90*l.* by rate. A meeting has since been held in the vestry to receive the tenders. There were five sent in; the highest 2,375*l.*, the lowest 1,625*l.*: the latter was accepted, being the tender of Messrs. Merrick & Taylor, Hereford. The church is to be new-roofed with lead; all the pews and galleries taken out, and to be repewed, the one-half to be free sittings; all the windows to be fresh glazed, and the stonework restored; the walls, pillars, and arches, to be clear of mortar, whitewash, &c.; the whole to be heated with hot air. The works to be commenced as soon as agreement, &c., are signed. The old chancel was taken down about four or five years ago, and a new one built at the expense of Mr. A. J. R. B. Knight, and last year the churchyard was enlarged. It is hoped that some of the gentry in the parish will present a window or two of stained glass.

Sale (Cheshire).—St. Ann's Church has been re-opened after the completion of alterations and additions, comprising a new aisle to the south side of the nave. The alterations have been carried out uniform with the church. Additional accommodation has been obtained for about 200 persons, at an outlay of about 600*l.* The contract has been executed by Messrs. Davis & Mawdsley, builders, Manchester, under the superintendence of Mr. John Lowe, architect.

Odd Rode (Cheshire).—A memorial church here, erected in remembrance of the late Mr. Randle Wilbraham, has been consecrated. The new church is dedicated to All Saints. It occupies a site near to Rode Park, at the angle of the cross lane, leading to the Wilmslow and Lawton turnpike road. The edifice has been built from designs by Mr. Scott, in the Early Decorated style. It consists of a nave 66 ft. by 24 ft. 9 in.,

and a chancel 33 ft. by 18 ft. 6 in., each of which has an aisle on the south side,—that in the nave being for the accommodation of the congregation, that in the chancel being for the use of the Wilbraham family. The chancel is separated from the nave by an arch, with deep stone carvings of vine foliage, which also adorn the capitals of the two marble columns of the arches dividing the chancel from the family chapel. The east window is filled with stained glass (by Mr. O'Connor), the gift of the Hon. Catherine Arden. It represents the Adoration of All Saints. The floors of the aisles are inlaid with Minton's tiles, and the high pitched roof is of pine timber. The seats are all open, and rest on a boarded floor. The main entrance to the church is by the west door, and there is also an entrance through a stone porch on the south side. The font is of alabaster, and has been executed by Mr. J. B. Phillips, of London. The west gable of the church is surmounted by a double bell-turret. The carving of the church, both inside and out, is the work of Mr. Farmer, of London. Externally the building is composed of Kerridge stone, with Mow Cop stone dressings; internally, of Hollington stone and dressings of Mow Cop ashlar; the chief part of the marble used in the internal ornamentations being Derbyshire marble. The contract was let to Mr. Gallimore, of Newcastle, for 5,000*l.*; but the elaborations that have been added since will probably raise that amount to 6,000*l.*, nearly the whole of which has been defrayed by the Wilbraham family. The edifice will seat nearly 500, and, together with the burial-ground surrounding, occupies an area of about 1a. 20p. of land.

Southport (Lancashire).—The peal of bells made by Messrs. Mears & Co., of London, has been hoisted into the steeple of Christ Church. The tenor bell, which is in the key of G, weighs 10 cwt. 4 lb., and the weight of the entire peal is about two tons. There appears to be plenty of room in the interior of the tower, so that the six bells will all be hung on one level. The cost of the bells is calculated at 450*l.* A good portion of this amount is already subscribed.

Lazonby (Cumberland).—The parish church of St. Nicholas, Lazonby, is about to be rebuilt. Not a very long time ago the edifice was renovated, but it was the desire of the late Colonel Maclean that an edifice more in accordance with modern ideas of comfort and convenience should replace it, and his widow has carried out his desire. The new church, the design for which has been prepared by Mr. Salvin, of London, will be considerably larger than the old one; and the whole work has been intrusted to Mr. W. Grisenthwaite, builder, Penrith. The foundation stone has been laid by Mrs. Maclean, of Lazonby Hall.

RAILWAY MATTERS.

A MANCHESTER man, Mr. Turner, has obtained provisional protection for improvements in communicating between one part of a railway train and another. The principle is that of the gutta-percha speaking-tube. A whistle gives warning, and the ear applied to the other end of the tube enables the person addressed to hear the message. Mr. Turner proposes to apply the tube on the same plan as the Lancashire and Yorkshire Railway Company convey their gas.

The new station of the Stockport and Timperley railway, at Tiviot Dale, is progressing. The preparation of the site has been a work of some magnitude; over 100,000 cube yards of earth and rock having been removed. The station is in the Elizabethan style. The architect is Mr. Mangnall, of Manchester. The stone, brickwork, and excavating have been undertaken by Mr. Forrester, of Stockport; and the other part of the work by Mr. D. Cochrane, of Manchester. The building, it is supposed, will cost about 8,000*l.*

The traffic receipts of railways in the United Kingdom amounted, for the week ending the 27th of August on 11,440 miles, to 703,876*l.*, and for the corresponding week of last year, on 11,001 miles, to 642,314*l.*, showing an increase of 439 miles, and of 61,562*l.* in the receipts.

The total working expenses of the railways of England and Wales, in 1863, amounted to 12,653,618*l.*, against 12,050,581*l.* in 1862; of the railways of Scotland to 5,618,204*l.*, against 1,520,056*l.* in 1863; and of the railways of Ireland to 760,412*l.*, against 679,772*l.* in 1862. The aggregate for the United Kingdom was thus 15,037,234*l.* in 1863, against 14,268,409*l.* in 1862. The length of line in operation at the close of 1863, was 12,322 miles, and at the close of 1862, 11,551 miles. The ratio of expenses to receipts appears to have been reduced last year to 48 per cent., against 49 per cent. in 1862.

The number of train miles run on the railways of the United Kingdom continues to increase year by year. Thus in 1860 the aggregate distance accomplished was 102,243,692 miles; in 1861, 105,141,440 miles; in 1862, 108,061,797 miles; and in 1863, 116,592,161 miles. As the earth is 95,000,000 miles from the sun [the distance was shortened two or three millions last year by the astronomers, it may be recollected] it follows that the aggregate number of trains run last year would, if each had started where another stopped, not only have reached the great centre, but have got nearly a fourth of the way back again. The English and Welsh railway trains ran last year 97,424,179 miles, against 89,329,482 miles in 1862; the Scotch trains, 12,559,048 miles, against 12,309,443 miles in 1862; and the Irish trains, 6,608,934 miles, against 6,422,872 miles in 1862.

There are at present ten railways in India either opened for a portion of their whole distance or in process of construction, and some of these have branch lines. Two lines, the Scinde (114 miles) and the Eastern Bengal (115 miles), are finished their whole length. The total length of line now opened for traffic is 2,687¾ miles, and 2,100 miles yet remain to be constructed before the system, as far as sanctioned, will be completed. Since the 1st of January, 1863, 358¼ miles have been finished and opened up to January last. Last year, 279 ships carried out from this country 106,850 tons of goods, valued at 1,285,464*l.*, for the railways, while nearly a like quantity was sent during the previous twelve months. The shipments of railway materials to India from this country have altogether amounted to 2,764,781 tons, of the value of 5,128,856*l.* Most of the servants of the companies are at present Europeans, of whom there are now 2,800; but it is thought that in process of time the natives may be brought to discharge many of the duties, which will tend greatly to facilitate the more economical working of the line.

The *Corriere dell' Emilia* of Bologna says:—"On the evening of the 31st of August there only remained 10 metres of the tunnel beneath the Apennines to be pierced. The passage will therefore be completed about the 10th of September, but from thirty to forty days more will be necessary to terminate the widening of the gallery and the masonry. The works on the southern slope of the mountain are so far terminated that the engineers of the company have been able to run down the incline in small waggons set in motion by their own weight. The line is expected to be opened about the 1st of November. Tuscany will then be united, not only to Bologna, but to Milan, Turin, &c."

Extension of the Metropolitan Railway to Tower-hill.—The preparatory works for this extension have been commenced. The ground scheduled for the Finsbury extension to Little Moorfields has been cleared, with the exception of a small portion between Whitecross-street on the eastern side and Moor-lane on the west, and a few houses in the Pavement. In order to enable the contractors for the making of the extension to proceed across Finsbury-circus, it has been found necessary to deepen the sewers considerably in Fore-street and Moorgate-street, near the Albion Presbyterian Chapel. When this work, which is progressing under the contractor, Mr. J. Jay, on the part of the railway, and Mr. Lidstone on the part of the City Sewers Commission, is completed, the extension of the Tower-hill line through Finsbury-circus, will be proceeded with as rapidly as possible.

GAS.

THE Manchester Corporation have resolved to reduce the price of gas within the city, from 3s. 6d. to 3s. 2d., large consumers paying a trifle less, and consumers beyond the city a higher rate. "The plan of lowering the price gradually," says a local paper, "has worked exceedingly well, for with each successive reduction the income has increased. A profit of nearly 60,000*l.* was made last year, and of this sum about 28,000*l.* will be devoted to improvement purposes."

The West Ham Gas Company have declared a dividend of 4 per cent. for the six months ending 30th June last, in addition to ½ per cent. to make up for deposit dividends previously paid by the company. The report states, that during the past six months three millions of cubic feet of gas had been consumed more than in the corresponding period in 1863. The new offices are now nearly completed.

The annual meeting of the Sherborne Gas Company has been held for the first time in the company's own building. Although the report shows a profit of 468*l.*, and a 7½ per cent. dividend absorbed only 300*l.*, the report is not so favourable as last year. The balance of profit and loss, however, was so large last year, that 1,000*l.* were transferred to capital account, new shares to that amount being distributed among the proprietors. The usual dividend of 7½ per cent. was declared on both old and new shares, and a balance of nearly 100*l.* will then be carried over. The company are laying down a new main, and have announced a reduction in the price of gas from 6s. 3d. to 5s. 10d. per 1,000, with a discount of 10d. per 1,000 off for cash.

The Hanley Gas Consumers' Company (Limited) are making progress towards the establishment of gas works. The question of a site for the works is being discussed.

Books Received.

Nesbitt's Practical Land Surveying. Edited by William Burness, F.R.A.S. London: Longman, Green, & Co. 1864.

THIS excellent book needs no commendation from us. Ten editions have been sold, and this, the eleventh, now before us, is an improvement on all that have gone before. Mr. Burness has revised and enlarged the book, especially in the parts devoted to railway surveying, to which the treatise works up gradually from definitions and descriptions of instruments required. There is no part of the subject that is not treated of in this book, and the man who masters it has mastered the art of land-surveying.

Mathematical Exercises. With Tables, Formulæ, Answers, and References. By S. A. Winter, F.R.A.S., Military Tutor. London: Longman & Co. 1864.

THESE exercises comprise 3,500 examples in the various branches of pure mathematics, statics, dynamics, and hydrostatics, and are taken from military, civil service, and other examination papers, used at Woolwich, Sandhurst, &c., and collected and arranged in sets for the use of students preparing for examination. This volume, therefore, differs from any with which we are acquainted, and must be of especial utility to students about to undergo examinations in which they will encounter similar questions arranged in the same way.

VARIORUM.

The current number of the *Art Journal* contains an illustrated paper by Professor Ansted, on "Cyclopean Structures in Sardinia and Italy." The writer attributes them to the same predecessors of the *Greeks* who erected similar works in Ithaca and Cephalonia, at a period concerning which we have no written record. The engravings in the number, especially one by Lightfoot, after O'Neill's "Foundling," are very good. The subject of Mr. Dafforne's chapter on "British Artists," is Miss Osborn, of whose excellent works three examples are given.—— "How I won my Spurs; or, a Boy's Adventures in the Barons' Wars," by Mr. J. G. Edgar (S. O. Beeton), is an amusing tale, of the G. P. R. James class, very fully illustrated, and including a number of views of old buildings referred to in the story.——"The New Gymnastics for Families and Schools. By Dio Lewis, M.D., Boston. Tweedie, Strand, London. 1864." Though an American treatise, this volume has been reprinted for the London publisher from the sixth American edition, with an introduction by Mr. Tyler, who is styled "Principal of the London School of Physical Education." The volume, besides gymnastics, contains subdivisions on the dumb-bells, and what is called the Pangymnastikon. There are no less than 300 illustrations. The peculiarities of Dr. Lewis's system consist in the use of light and simple apparatus; and he does not approve of any but light and moderate exercises, as the muscular system may be cultivated into "a magnificent shell" at the cost of the vital and cerebral functions. The movements on this system are regulated and stimulated by music, and it is an object to excite the spirits as well as the body, and to render the

system attractive and promotive of cheerfulness and good humour in its practice. Mr. Tyler seems to have been a pupil of Dr. Lewis, and he speaks of him as "the leader of a great gymnastic reformation in America, as distinct, as profound, as memorable, as that of Ling in Sweden, or of Jahn in Germany."—"The History and Antiquities of Northamptonshire. By the Rev. Thos. James, M.A., late Vicar of Sibbertoft. London: Murray. 1864." This small volume is reprinted from the *Quarterly Review*, and has been before noticed in the *Builder*. It is well written, and contains an interesting account of Northants. We may quote a short passage on its sanitary condition as an example of the book:—"Remarkably free from epidemics, its high average elevation makes it a trying climate for pulmonary complaints. Consumption and rheumatism are its prevalent scourges. A subsoil of stiff clay and the abundance of grazing land foster damp. 'Cold singly, or damp singly,' says Dr. Robertson, the great medical authority of the county, 'may be successfully resisted by the human frame, but when they act in concert they constitute the pestilence that walketh in noon-day.' The extensive system of drainage which is being adopted in every direction, and for the outlet of which the ground is remarkably favourable, will soon reduce the latter of these two evils. The writer of the 'Magna Britannia,' in 1738, assigns as a reason for the healthiness of the country, one which would hardly be accepted in these coast-frequenting days. 'The air of Northants is exceedingly pleasant and wholesome, the sea being so remote that it is not *infected with its noisome fumes.*'"——A Dictionary of Chemistry and allied Branches of other Sciences, founded on that of the late Dr. Ure. By H. Watts, B.A., F.C.S., editor of the *Journal of the Chemical Society*, assisted by eminent contributors. Part XIX. Lactucarium—Leucates. London: Longman & Co. 1864." The part now before us of this valuable dictionary contains an elaborate account of lead, both as a chemical substance and as an article of manufacture, with engravings of apparatus for the conversion of ores into metal, oxides, &c. The work is now pretty well through, this being the nineteenth monthly part, many of which nineteen were double or 5s. parts, while the remainder of the thirty-three parts, of which the work consists, are only half-crown parts. It still sustains its character as a work destined to form a standard dictionary of chemistry and allied sciences.

Miscellanea.

BRITISH ASSOCIATION.—The congress of the British Association was formally opened at Bath on Wednesday evening last. Sir Charles Lyell, the president of the Association, delivered the inaugural address. Commencing with an allusion to the hot springs of Bath, he went at length into an account of the changes which have occurred, from time to time, in the condition and arrangement of the globe.

NORTHAMPTON TOWN HALL.—In our mention of the opening of this building we omitted to state that the builder was Mr. John Watkin, of that town. At a dinner given last week by the corporation to the workmen who had been employed in the erection of it, the mayor in the chair, the toasts to the health of the architect and the health of the builder were drunk with much warmth. Mr. Peebles, too, clerk of the works, was not forgotten.

DEATH OF MR. RISHTON, THE BUILDING SURVEYOR TO THE LIVERPOOL CORPORATION.—We regret to hear of this well-known gentleman's death. The mayor, in announcing it to the council, said Mr. Rishton had been a faithful servant of the corporation for about thirty years: he had come in contact with a great number of individuals of a peculiar class: he had always endeavoured to discharge his duties efficiently, faithfully, zealously, and well; and he felt quite assured that the council would consider it nothing more than due to a servant of tried capacity to express their regret at the melancholy circumstance of his death, and to convey a statement of that regret to the family of Mr. Rishton. Various members of the council endorsed the encomiums passed on the deceased by the mayor, and it was arranged that he should write a letter of condolence to Mr. Rishton's family.

SCULPTURE FOR THE SULTAN'S HAREM.—Several of the first artists in Paris are busily employed in sculpturing a collection of beasts, destined to be placed in the gardens of the Harem at Constantinople. Twenty-two animals are already completed,—crocodiles, porcupines, tigers, and serpents, "so lifelike one scarcely feels safe in their neighbourhood."

FALL OF A SUSPENSION-BRIDGE.—The suspension-bridge over the Oise at Verberie gave way a few days ago, and a loaded waggon with five horses and the driver were precipitated into the river. Two of the animals saved themselves by swimming ashore. The bridge has been built twenty-eight years, and must have been in a very bad condition, as the weight of the waggon under which it gave way was only from 5,000 to 6,000 kilogs., which is much less than the limit of weight fixed by the engineers.

THE EXHIBITION OF MEDIÆVAL ART AT MALINES.—The recommendation in the *Builder* to Englishmen interested in Mediæval art to visit this exhibition is justified, it appears, by a Fellow of the Society of Antiquaries, who writes from Brussels to draw attention to this "magnificent exhibition," as he calls it, and which will be open till the 25th of this month. The exhibition is especially rich in ecclesiastical relics of Mediæval art; and there are many that are historically interesting.

THE NORTH LONDON INDUSTRIAL EXHIBITION. As recommended by the opening committee, the opening ceremony will take place on Monday, the 17th of October, at three o'clock, in the Agricultural Hall, the directors of which have acted in a liberal manner as to the holding of the Exhibition in the large hall. There will be music and other ceremonial observances at the opening; the charge for admittance to which will be half-a-crown for the body of the hall, and one shilling for the galleries. After the opening ceremonial, and on the same day, the charge will be one shilling.

PROPOSED NORTH LONDON SCHOOL OF ART.—We are sorry to hear that the endeavours which were made some time ago to raise funds for a building for this purpose have not proved successful, and that the honorary secretary, Mr. Houle, having lost several of the most active members of the committee by illness and otherwise, finds himself compelled to abandon the undertaking after expending, himself, nearly 70*l.* in the attempt. This is much to be regretted; and, considering the extent of the district, and the interests involved, is not creditable to the inhabitants and proprietors. Lord Granville, it will be remembered, took the chair at a public meeting held to promote the scheme.

RESTORATION OF WORCESTER CATHEDRAL.—The appeal made to the public at the recent public meetings held at Worcester, Warwick, and Birmingham, in the diocese of Worcester, has resulted in a very liberal sum being raised towards the completion of the restoration of this cathedral. The amount estimated to be required, in addition to the 30,000*l.* already spent, is 32,000*l.*, and there has already been subscribed one-half of that amount, 16,223*l.* 19*s.* being the present amount of subscription. The estimate of Mr. Hughes, of Bristol, for the restoration of the tower was accepted, and the work will be proceeded with forthwith.

BURNHAM BEECHES.—Such of our readers as know the picturesque and weird-like scene the Burnham Beeches present, will be interested with this paragraph, by a writer in *Notes and Queries*:—Some years ago I stumbled on an interesting *souvenir* when visiting this fine bit of forest land. In the middle of a noble natural amphitheatre, around which the trees had grouped themselves, so as to make it specially secluded, I found a simple white stone, inscribed, "F. M. B.," with a date, and some verses commemorative of the many gifts and graces, intellectual and moral, of an eminent musician. I at once recognised the lamented Felix Mendelssohn Bartholdy as the subject; and, on inquiry, I found that this spot had been the favourite haunt of the poet-musician when visiting at the neighbouring seat of Mr. Grote, the historian of Greece; and that the erection of this memorial, and the lines which it bore, were the feeling tribute of that well-known friend of musical genius, Mrs. Grote. Certainly no fitter place could have been chosen to inspire the "wood-notes wild," which Nature taught her favourite child, and which of all his strains he loved best to utter.

A NEW LIVERPOOL THEATRE.—Operations for the erection of the Alexandra Theatre at Liverpool will be at once commenced. Its site is in Lime-street, almost immediately adjoining the terminus of the London and North-western Railway, and facing St. George's Hall.

ROOFING BRIDGES WITH GLASS.—The Mersey Dock Board, following the example of the arrangements at the Birkenhead Ferry, have in contemplation to roof with glass the bridges which at present communicate between the piers and the St. George's landing-stage on the Liverpool side.

TYNE BRIDGE.—The removal of the premises at the Newcastle end of Tyne Bridge, for the purpose of approach to the temporary bridge, during the pulling down and rebuilding of the present structure, is being proceeded with. By the demolition of the buildings immediately west of the toll-house, a portion of the old bridge, on which the toll-house seems to have been built, has been exposed to view, and is worth looking at by the curious, as it will very soon disappear

SAFETY IN RAILWAY TRAVELLING. -Two or three gentlemen wish us to tell the public they have invented much better plans for communicating between guard and passenger than any yet set forth. We will wait and see if they be so. Mr. T. M. Feist, of Brighton, on the other hand, sends us full particulars of an invention with the same end in view. It seems, however, much too elaborate. A quite simple arrangement will suffice.

THE FLINT GLASS MAKERS.—The United Flint Glass Makers' Friendly Society extends throughout England, and to Scotland and Ireland, and is gradually accumulating a large sum of money. After having just added another thousand pounds to three thousand which they had funded last year, they still possess a fifth thousand which is kept in hand for "trade purposes." Their organization is mainly devoted to "protective" objects, though, as the secretary observed at the recent Stourbridge meeting, there has not been a strike in the trade for some years past.

CROYDON WATER SUPPLY.—During the past week a series of testings have taken place at the new well, Mr. Docwra, the contractor, having completed the undertaking, the depth of the boring being 150 ft. It has been ascertained that a continual supply of water, amounting to about 840,000 gallons can be obtained in the space of twenty-four hours, and this without in any way interfering with the yielding of the old well, from which, at the same time, one million gallons and a half per day can be supplied.

HOW TO DESTROY ANTS.—An agriculturist, M. Garnier, has just announced an infallible method for getting rid of ants. In a corner of his garden infected with legions of these insects he placed four saucers containing sugar and water, with the tenth of its weight of arsenic in the mixture. A number of ants immediately invaded the saucers, but were soon after perceived staggering away, as it were, and some being even engaged in dragging their dead comrades away. From that moment, they disappeared from the garden, and on the following day not a single one was to be seen. How and whither this immense population emigrated in so short a time is a mystery which M. Garnier has been unable to clear up, and is inclined to attribute it to some mysterious instinct.—*Paris Letter.*

NEW PROCESS FOR HARDENING TIMBER.—A native of Russia has discovered a process by which timber, though newly felled, may become so hard as to resist the influences of the most trying climate for an almost indefinite period. The most curious part of the invention is, that it does not involve the use of chemicals of any sort, such as steeping in creosote, &c., and that the process is applied to the tree while growing. The inventor is now making arrangements for the supply of his timber to railway contractors in England, and will not require any remuneration further than the amount which would be paid for ordinary timber, until the period shall have elapsed beyond which the ordinary railway sleepers, telegraph-poles, &c., require to be replaced. The best railway sleepers require renewing at intervals of from four to six years; but the inventor of the new process of preparing timber asserts that he will supply an article which need not be disturbed for fifty years.

TRACES OF LAKE DWELLINGS.—Dr. Lioy has discovered the remains of habitations in the old bed of the Lake of Fimon, four miles from Vicenza. A number of flint implements, others made of bone, the remains of stags, and other animals which have now disappeared from those parts, have also been found.

THE BIRKENHEAD STREET RAILWAY.—Birkenhead, which resembles many American cities in having the advantage of a street railway system, is to be subjected to law, for this reason. Mr. Gough, hotel proprietor, and Mr. Evans, omnibus proprietor (whose traffic the street railway interferes with), have intimated that, unless the line of rails in Bridge-street is at once taken up, they will take such steps to enforce their removal as the solicitors acting for them may advise.

PROPOSED NEW TOWN-HALL FOR MANCHESTER.—The erection of a new town-hall for Manchester has long been regarded as indispensable, and a sub-committee, appointed in November last, to consider the subject, have reported in favour of Albert-square as the place best adapted on all grounds for the proposed new building, and their recommendation will be taken into consideration at the October meeting of the city council. The cost of the land and buildings which will have to be purchased in the event of this site being chosen will be about 127,000*l.*, but one-third of this will be incurred in widening Princess-street and in the completion of Albert-square.

NON-LIABILITY FOR NEGLIGENCE OF WORKMEN.—The defendant in the case of Williams *v.* Jones had employed a carpenter to make a signboard for him out of some wood which he had bought of the plaintiff; and thereupon the plaintiff gave the defendant permission to use his shed, with a carpenter's bench which was in it, for the purpose of this work. The carpenter accordingly proceeded with his work in the plaintiff's shed, and while doing so he lighted his pipe, and set fire to some wood shavings, which set fire to the shed, which was thus totally destroyed, and other damage was done. The jury found,—First, that the shed was lent to the defendant, and that the carpenter used it as his servant; and, secondly, that the fire was caused by the carpenter's negligence. The Court of Exchequer, under these circumstances, held that this action could not be maintained, the negligence not being that of the defendant, nor an act of the carpenter within the scope of his employment by the defendant.

THE STEEPLE OF ST. NICHOLAS'S CHURCH, NEWCASTLE-UPON-TYNE.—The dispute between the council and the churchwardens still goes on. The churchwardens "decline to do or concur in any act calculated to cast the very serious responsibility and heavy burden of repairing the steeple of St. Nicholas upon the parishioners," as "their predecessors were advised by counsel that the corporation of Newcastle are liable to make the repairs, the corporation having from time immemorial repaired the steeple." The council, after some discussion on the subject, have written to the churchwardens, not denying what they say, but asking "whether they agree to have the question of liability settled by a joint case for the opinion of the Court of Queen's Bench; or in case they decline that proposition, whether they will contribute, and to what extent, to any general subscription for the repair of the steeple. The council, we understand, would contribute 500*l.* The estimated cost of repairs is about 1,600*l.* It is to be hoped that while the parties are disputing, the steeple will not come down.

LIMOGES ENAMELS.—The late Sir F. E. Scott's bequest to the Midland Institute, at Birmingham, has now been placed in the cabinet designed for the fine collection of enamels, chiefly painted, of which this valuable bequest consists. There are twenty-one specimens, mostly plaques. Sir Francis Scott having not only a love of art, but also a practical knowledge of its many branches, saw how important it might be to Birmingham if this art of enamelling could be revived, because as a means of decoration it is peculiarly applicable to many of our manufactures. It is frequently attempted in our jewelry, but hitherto not with much success. Should a taste for it arise, there are many branches of our manufactures in which it might be profitably used. No greater boon could, from this point of view, have been conferred upon such a town as Birmingham, than this gift of Sir Francis Scott's, which contains some of the best examples of the art.

AN ODD FACT.—A shock of earthquake was felt in the neighbourhood of Hankelow, in Cheshire, lately, the inhabitants feeling it so distinctly as to be shaken in their beds. On the following morning, says a local paper, a farm servant, passing with some horses, heard a noise in a small plantation; and, in going to the place whence it proceeded, he discovered a large volume of water issuing from an orifice in the ground in a spot where there never had been water before. The opening was 12 in. or 14 in. in diameter, and the water spurted out to about 6 in. from the ground, and continued running into an adjoining rivulet.

MONUMENT TO THE BROTHERS VAN EYCK.—An interesting ceremony recently took place at Maeseyck, in Belgium, on the occasion of the inauguration, in the presence of King Leopold and the Count de Flandre, of a monument to the brothers Van Eyck, the well-known painters. The sculptor is M. Wiener, and the group, which is in white marble, represents the brothers at the period of the discovery of painting in oil. Jean Van Eyck has just terminated his first picture by the new method, and has submitted it for approval to his brother Hubert, his master. The king, in congratulating the sculptor, made him an Officer in the Order of Leopold.

OPENING OF BARROWS IN CAITHNESS.—Mr. Laing proposes to explore certain mounds in his neighbourhood; and, to begin with, has been excavating at two of them, called the Birklehills or Castles Singlass. The remains of a human skeleton, a great many bones of various animals, and a curiously-formed piece of old red sandstone, of an oval shape, with a groove an inch wide cut round its edge, were soon found. These mounds, and others near the castle, are to be further explored. The *John o'Groat's Journal*, while speaking of these explorations, alludes to ancient refuse-heaps in Caithness, with sea-shells, chiefly limpets and periwinkles, *of larger size than now exist on the coast*, which is *many miles* from the refuse-heap; and states that fragments of very large bones, such as those of a whale, were also found. The writer wonders at the ancient people who produced those mounds travelling so many weary miles to the sea to gather shell-fish when short of those animals of the chase which they killed with such flint arrows and sling-stones as were also found associated with them. But did they travel so many miles for such a purpose? Did they drag whale-bones so far inland? Is it not more likely that the sea then travelled inland to them?

STABLE VENTILATION.—Stables should have plenty of ventilators in the ridge of the roof, and a number of openings in the walls above the horses' heads: the heated air would then escape by the highest openings, and cold air enter by the lower ones, and immediately take the place of that escaping above, thus not blowing down on the horses at all. If this plan were thoroughly carried out, I think it would be sufficient; but where, from a loft being over, this plan cannot be adopted, and you could not conveniently carry ventilators through the loft, try two rows of holes in the walls, both above the horses' heads; and if this is not sufficient, holes must be made along the bottom of the walls furthest from the horses. Do not be afraid of the draught: it has been proved that animals in a state of nature require very little more than food and shelter to preserve them in a healthy condition; but go into almost any stable you please, and what do you think of it? I suspect you will find more than shelter there: it probably is so warm and stifling that you can hardly breathe. You look at the ventilators, if there are any, and you will find them stuffed with straw, and every crack or hole in the wall or window effectually closed, for fear the horses should take cold. Continue this, and you will continue to have influenza, coughs, ophthalmia, and a variety of other diseases in your stables, and perhaps employ me to cure them; but if you wish never to have a case of the kind, take my advice, and thoroughly ventilate: far better have too much air than too little. You must have plenty of pure air at any sacrifice: however inconveniently the ventilators may be placed, they are better than none. I would rather have a stable full of cracks and holes, what you call tumbling down, to preserve the health of a horse, than the majority of stables throughout the country. There are times when, from the heat and stillness of the external atmosphere, the ventilation becomes stagnant: in such case of course you must have adventitious aids, opening all your doors, windows, &c.—*Lecture by Mr. Willis, V.S.*

TENDERS.

For building a villa residence at Chertsey, for Mr. H. Wetton. Mr. T. Wonnacott, architect:—

Elliott	£2,307 0 0
Duke	1,215 0 0
Forster	1,135 0 0
Chappell (accepted)	900 0 0

[Some strange mistake here!]

For new Baptist chapel (the Surrey Tabernacle), Walworth. Mr. Edgar P. Loftus Brock, architect:—

T'Anson & Co.	£10,170 0 0
Simpson	9,447 0 0
Carter & Son	9,325 0 0
Coleman	9,105 0 0
Rider	8,880 0 0
Newman & Mann	8,766 0 0
Harding	8,710 0 0
Myers & Co.	8,653 0 0
Wells	8,600 0 0
Colls & Co.	8,445 0 0
Perry & Judson	8,363 0 0
Sharpington & Cole	8,333 0 0
Downs	7,963 0 0
Manley & Rogers	7,917 0 0
Sawyer (accepted)	7,771 0 0

For house, at Worcester Park, for Mr. W. Maxwell. Mr. Alfred Smith, architect. Quantities furnished:—

Clemence	£6,312 0 0
Macey	6,281 0 0
Mansfield & Sons	5,530 0 0
Hill & Sons	5,510 0 0
Gammon	5,359 0 0
Nicholson & Sons	5,330 0 0
Patman & Fotheringham	5,258 0 0
Woodward	5,105 0 0
Foster	4,970 0 0
Adamson & Sons	4,899 0 0

For house and shop, in the Wandsworth-road, for Mr. Surman. Mr. Peacock, architect. Quantities not supplied:—

Green	£360 0 0
Booth	395 16 0
Owen	375 0 0
Ott	368 0 0
Lathey, Brothers	323 0 0
Eastman	265 0 0

For roads and sewers on the Lambeth Freehold Estate, Thornton Heath, for the Croydon Local Board of Health. Mr. Baldwin Latham, engineer:—

Pattern Sheets, and all information, may be had of E. LANGLEY, Agent, East Cowes-park, Isle of Wight.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of the plan are two fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

NORWICH UNION FIRE OFFICE.—THE BONUS YEAR.
THREE-FIFTHS of the Profits of the Company are periodically distributed as a Bonus to parties insuring, who have thus from time to time received from the Society sums amounting in the aggregate to nearly 440,000l.
A FURTHER BONUS of 52,057l. has now been declared, and will be paid on the renewal of existing Insurances at Michaelmas, 1864, and the three following Quarters.
EXAMPLES OF PREMIUMS REDUCED BY THIS BONUS.

No. of Policy.	Sum Insured.	Annual Premium	Reduced Premium for 1864
	£	£. s. d.	£ s. d.
441,411	22,540	222 4 4	120 19 2
451,191	12,000	61 0 0	25 0 0
484,174	6,340	35 14 0	19 16 8
500,367	3,000	7 10 0	4 6 4

THE RATES OF PREMIUM ARE IN NO CASE HIGHER than those charged by the other principal offices giving no Bonus to their Insurers.
No charge is made for the Policy or Stamp when the Insurance exceeds 200l. or for Insurances transferred from other Offices.
The Business of the Company exceeds Seventy Millions, and, owing to the liberality with which its engagements have been performed, is rapidly increasing. The duty paid to Government for the year 1863 was 84,142l. 11s. 9d.; the amount insured on Farming Stock was 10,942,0?.
The Norwich Union Fire Office is the LARGEST OFFICE making a return to its Insurers.
For Prospectuses, apply to the Society's Offices, 29, Fleet-street, E.C.; and Surrey street, Norwich.

FOR WATER, OIL, AND TURPENTINE.
CATTLE TROUGHS, GIRDERS, CART BODIES, &c.

Omnibuses from Limehouse Station, Blackwall Railway.

THE FURNISHING OF BED-ROOMS.
HEAL & SON have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed room Furniture than is usually displayed, and that to judge properly of the style and effect of the different Kinds of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large and additional Show-rooms, by which they are enabled not only to extend their Show of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete suites of Bed-room Furniture in the different styles.
Japanned Deal Goods may be seen in complete suites of five or six different colours, some of them light and ornamental, and others of a plainer description. Suites of Stained Deal Gothic Furniture, Polished Deal, Oak, and Walnut, are also set apart in separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.
Bed Furnitures are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.
A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.
The Stock of Mahogany Goods for the better Bed-rooms, and Japanned Goods for plain and Servants' use, is very greatly increased. The entire Stock is arranged in eight rooms, six galleries (each 120 feet long), and two large ground-floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.
Every attention is paid to the manufacture of the Cabinet-work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their own immediate care.
Their Bedding trade receives their constant and personal attention, every article being made on the premises.
They particularly call attention to their Patent Spring Mattress, the Sommier Elastique Portatif. It is portable, durable, and elastic, and lower in price than the old Spring Mattress.
HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free by Post.—196, 197, 198, Tottenham Court-road, London.

DESACHY'S FIBROUS PLASTER.
GEORGE JACKSON & SONS,
HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN
DESACHY'S FIBROUS PLASTER,
Beg to call the attention of Architects to its Capabilities.
It is adapted for the speedy and economical production of any coffered or circular work, waggon-headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), fluted and plain columns, panelled dados, all kinds of dosser, &c.; for the linings of walls and ceilings, and for all purposes of ornamental plaster.
The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made; it has been used (under the direction of Owen Jones, esq.) for the ceiling of St. James's Hall; at Messrs. Osler's, Oxford street; Mr. Hancock's, New Bond-street; the Crystal Palace Bazaar; the House for the Aged, South Lambeth, and at various other Works.
SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.
DESIGNS MADE FOR ANY WORKS.
LITHOGRAPHED DESIGNS OF CEILING FLOWERS, &c, SENT FREE ON APPLICATION.

SHIPMENTS ON THE SHORTEST NOTICE.

HYDRAULIC LIME and ROMAN CEMENT, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Liverpool Docks, Manchester, and various waterworks, collieries, and mines throughout the country, being so long celebrated for its strong cementitious and connecting powers for masonry in water. Can be supplied by rail or water to any part of the kingdom, either in lump (loose), or ground, and in barrels and bags. The Limestone can be had in full cargoes, also their Cement in barrels, which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference. Apply at the Works; or to R. & W. AARON, Agents, 66, South John-street, Liverpool.

BURHAM BRICK, LIME, and CEMENT COMPANY, BURHAM WHARF, BELVIDERE-ROAD, LAMBETH.—The public are informed that the Company have taken the above Premises, and have ON SALE, GAULT BRICKS, TILES, POTTERY, DRAIN-PIPES, GREY STONE LIME, PORTLAND and other CEMENTS, and BUILDING MATERIALS of all descriptions. Architects and Builders are respectfully informed that goods of any pattern or design can be manufactured at the Company's Works, erected on the banks of the Medway by the late Thomas Cubitt. They would also call the attention of the public to the very superior quality of their Portland Cement.

PURE HYDRAULIC LIME, Manufactured from the best HALKIN MOUNTAIN LIMESTONE, same as supplied for the construction of the Liverpool and Birkenhead Docks.
The HOLYWELL LIMESTONE COMPANY are prepared to deliver the above, in lump or ground, packed in bags, into waggons, at the Holywell Station of the Chester and Holyhead Railway, or on board vessels at Greenfield Wharf, Chester River.
Prices and particulars furnished on application to Mr. EVAN EVANS, Manager, Parry's Mine Works, Holywell, Flintshire.
The Company guarantee the quality of the Lime to be equal to that used by the Engineer of the Liverpool and Birkenhead Docks.
Agents wanted. No applications attended to without a banker's reference.

ABERTHAW BLUE LIAS LIME COMPANY,
WORKS near NEWPORT, Monmouthshire,

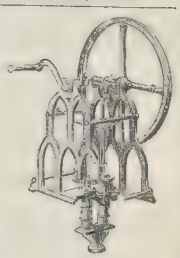
GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving-bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractibility and uniformity of substance, their non-susceptibility of injury from contact with oils, grease, sands, steadies, or water; and the facility with which the only joint required can be made in bands of feet 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pumpbuckets, Fire buckets, Bosses, Universal Joints, Flasks, Bottles, Bowls, Teapot-trays Curtain-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta Percha Company, and sold by their Wholesale Dealers in town and country.
THE GUTTA PERCHA COMPANY, PATENTEES,
WHARF ROAD, CITY ROAD, LONDON.

J. TYLOR & SONS' PATENT REGULATOR WATER-CLOSETS.

Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the flow of water, perfect flushing is insured. Any number can be supplied from one cistern. No stop-valves, cranks, or screw-pipes required. Full details in Illustration at the Manufactory, and list of testimonials forwarded on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

J. TYLOR & SONS' PATENT BATH APPARATUS.



The bath and boiler may be fixed in the same or separate rooms, anywhere below the level of cold-water cistern. Open to view for pleasure. No brickwork setting for boiler required.
Estimates given from architects' drawings, or by inspection of buildings.
Catalogues, containing Nine Illustrations of different models of heating baths, sent on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate street, London.

SALES BY AUCTION.

CLAPTON PARK ESTATE, Lower Clapton, Middlesex.—Eligible Freehold Building Land, finely timbered, and admirably adapted for villa residences; land-tax and tithe free.

MR. TAYLOR is instructed to SELL by AUCTION, at GARRAWAY'S COFFEE HOUSE, Change-alley, Cornhill, London, on TUESDAY, the 20th of SEPTEMBER, at TWELVE for ONE o'clock, 50 Lots of FREEHOLD BUILDING LAND, in Clapton-road, near to St. John's Church, Hackney, within a few minutes' walk of the Hackney Railway station, suitable for the erection of detached or semi detached villas. Nine-tenths of the purchase money may remain on mortgage or contract, at 5 per cent to be paid by quarterly instalments; but the whole or any part of the balance may be paid off at any time without notice. Particulars and a plan of the estate may be obtained at the Premises in Clapton; of T. W. ROGERS, Esq. Solicitor, 70, Fenchurch-street; at Messrs. HAMMACK & LAMBERTS, 59, Bishopsgate-street; at the Place of Sale; and of the Auctioneer, 70, Fenchurch-street, London.

PIMLICO IMPROVEMENTS. Fourteenth Sale of Building Materials.

MR. GEO. HAINES announces for SALE by AUCTION, on the PREMISES, on MONDAY, SEPTEMBER 19th, at TWELVE o'clock, the whole of the valuable block of five large family DWELLING-HOUSES, with back buildings, the corner of Upper Eaton-street and Grosvenor-street West; comprising many thousands of prime stock bricks, tiling and slating, large sound timbers in roofs, the usual fittings of two numerous rooms, clean lath and plaster throughout, mahogany and other doors, sash and plate glass doors, staircases with mahogany handrails, marble and stone chimney pieces, large quantity of lead, iron and stone work, fixtures and fittings. May be viewed. Catalogues of Messrs. HAINES & SON, Auctioneers, Moorgate-street, City; and at the Auctioneer's Offices, Grosvenor-street West, Eaton square, and No. 12, High-street, Kensington.

PURLEY, near Croydon, contiguous to the Caterham Junction Station, on the main line of the Brighton and South Eastern Railways, about 1¼ mile from the South Croydon Terminus, and 12 miles from London, which is reached in half an hour by rail.

MESSRS. BLAKE will SELL by AUCTION, at the GREYHOUND INN, Croydon, on THURSDAY, OCTOBER 13, at FORTY-FIVE o'clock, Twenty Valuable FREEHOLD BUILDING PLOTS and Two Cottages with Gardens, being a portion of the Purley Lodge Estate, the whole having capital frontages to the turnpike road, and to a new and spacious private road. The land has a substratum of gravel and chalk, and is in a delightful rural and healthy situation. The proximity of the railway station, and ready means of communication with the metropolis, render the land of a safe and sterling character for the carrying out of extensive building operations.—Particulars, with plans, may be had at the Greyhound Inn, Croydon; at Garraway's Coffee-house, Change-alley; of Messrs. WEST & KING, Solicitors, 3, Charlotte-row, Mansion House; and of Messrs. BLAKE, Croydon.

DUPPAS-HILL, CROYDON.—Important Sale of valuable Freehold Building Land at Duppas Hill, offering attractive Building Sites.

MESSRS. CRISPE & DRACOTT and CHARLES SMITH & SONS (who are jointly concerned on this occasion) will OFFER by AUCTION, at the GREYHOUND HOTEL, Croydon, on TUESDAY, OCTOBER 11th, 1864, at THREE for FOUR o'clock, Forty-four Plots of FREEHOLD BUILDING LAND, delightfully situate upon a beautiful elevation near the flourishing market-town of Croydon, within two minutes of the Waddon Station, an easy distance from the East and West Croydon and Addiscombe Stations, and about twenty minutes from London. These charming sites for villa residences have south and such lovely aspects, and are open to Duppas Hill, which has been appropriated by the Board of Health to the purposes of a public park. The soil is gravel and sand, the drainage is perfect, water and gas are laid through, and sewerage will be very shortly completed, and the whole of the land is free from tithe or rent charge. The Auctioneers strongly recommend this property to the notice of the public, as the healthful and picturesque situation, its contiguity to the railway, and the charming walks and drives in the neighbourhood, render it particularly desirable for families from the metropolis. The terms of payment are the most liberal, offering an unusually favourable opportunity for the profitable employment of capital. Particulars, with plans and conditions, may be had shortly at the Inns in the neighbourhood; at the Place of Sale; of C. FRANKISH, Esq. Solicitor, 23, Parliament-street, Westminster; and of the Auctioneers, CHARLES SMITH & SONS, 2, Broad-street-buildings, London, E.C. and Messrs CRISPE & DRACOTT, Auction and Land Agency Offices, 141, High-street, Croydon.

Railway Co.'s Horses, Brick and Rubbish Carts, Timber Carriages, Stone Trucks, &c. (in consequence of completion of the Thame and Oxford Railway) Mr R. Brotherhood (the known contractor) has instructed

MR. J. GOWER to SELL by AUCTION, at his REPOSITORY, Barbican, on FRIDAY, SEPTEMBER 23, THIRTY first-class young CART HORSES, among them are powerful shafters and active nippers; nearly new 30 and 1,000 brick carts, timber carriages, stone trucks, harness, &c. On view two days prior.

SOUTH KENSINGTON, INTERNATIONAL EXHIBITION, CROMWELL ROAD.—Important and Unreserved Sale of Van and Cart Horses, Vans, Timber Carriages, &c. By direction of Messrs Keck & Lucas, the eminent Contractors,

MR. J. GOWER will SELL by AUCTION, on the PREMISES (as above), on THURSDAY, the 22nd of SEPTEMBER at TWELVE o'clock, SIXTY first-class young active CART or VAN HORSES; twenty-two nearly new vans, timber carriages, &c.; chill and chain harness. Have been employed removing materials from the late Exhibition to Alexandra Park, now completed. The stock is worthy the notice of builders, contractors, and others. The horses, universally admired, selected with every care, regardless of cost; the vans, of light and heavy construction, built expressly for this contract, within the last few months; the whole of unreserved sale. On view two days prior. Catalogues on the Premises, and of the Auctioneer, at his Repository, Barbican.

HORNSEY, near the Railway station and Church, and in close proximity to the Alexandra Park. Very valuable and desirable Building Estate, adapted for the erection of first-class villa residences, and presenting to Land Societies and others a profitable and extensive building scheme.

MESSRS. NORTON, HOGGART, & TRIST have received instructions to OFFER FOR SALE, at the GUILDHALL COFFEE-HOUSE, near Guildhall, in the city of London, on FRIDAY, the 7th of OCTOBER next (unless previously sold by private contract), a most important and valuable FREEHOLD BUILDING ESTATE, of about 14 acres in the whole (the free and land tax redeemed), situate adjoining the property of F. Fletcher and H. Wood, esqrs. and glebe lands, in the rural village of Hornsey, at the foot of Muswell Hill, close to the church, only seven minutes' walk of the station on the Great Northern Railway, and within half an hour's ride of the metropolis. The property, which includes part of some nursery grounds, with the greenhouses and buildings thereon, is capitally adapted for a villa road from the Guildhall Coffee-house; and of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad street, Royal Exchange, E.C.

EARLY SALE at ELEVEN for TWELVE o'clock, on account of the LIMITS of LOTS.—To Timber Merchants, Builders, Cabinet Makers, &c.

MESSRS. LEREW will SELL by AUCTION, on the PREMISES, Camden-terrace, Camden-town, near the Old Eagle, on MONDAY, 26th SEPTEMBER, at ELEVEN o'clock, nearly 150 Lots of Capital STOCK, comprising Twenty loads of dis square, 1,500 planks, deals, and battens, flooring, 3,000 feet mahogany, larch, lime tree, beech, elm, dry cut pine, mantels, doors, useful stuff, 8 marble chimney-pieces, scaffolding, ladders, building materials, &c.—Auction Offices, 3, Cardington-street, Hampstead-road.

Vulcan Works, Church, near Accrington and Blackburn.

MR. KIRK is favoured with instructions from the Assignees of Mr Lupton, roller maker, machinist, & carriage catalogue, to OFFER by AUCTION, under a deed of assignment, for the benefit of the creditors, on WEDNESDAY, THURSDAY, and FRIDAY, the 21st, 22nd, and 23rd days of SEPTEMBER, the whole of the valuable TOOLS, Utensils, Plant, Machinery, Steam-engines, Boilers, Stock-in-Trade, &c. in the works, foundry, fitting-shops, smiths' shops, stores, &c. on these extensive works.—Full particulars of which will be given in detailed catalogues, which are being prepared, and will be ready shortly; and may be had of Messrs. HALL & BALDWIN, Solicitors, Clitheroe; or of the Auctioneer, at his Offices, 8, Essex-street, King-street, Manchester.

By Order of the Liquidators.—Preliminary Announcement.—Patent Alkali Works, St. Helen's, Lancashire.—Large Sale of Buildings, Materials, &c.

MR. KIRK respectfully announces that he is instructed to Catalogue and SELL by AUCTION, on WEDNESDAY, THURSDAY, and FRIDAY, the 28th, 29th, and 30th days of SEPTEMBER, the whole of the BUILDINGS, of every description (in order that the whole may be taken down, removed, and the ground cleared), forming the extensive Works known as the far-famed PATENT ALKALI WORKS, at St. Helen's, Lancashire, including extensive ranges of substantial brick buildings, to be slated roofing of the very best Welsh blue slates, rafters, joists, beams, planking, &c. immense in quantity and excellent in quality; cast and wrought iron work in columns, girders, tie rods, &c.; lead flashings, gutterings, shoots, &c.; flags, tiling, &c. Also a 2-horse condensing beam engine, 3 upright cylinder waterwheels, together with a vast assortment of valuable materials and effects.—Full particulars in future advertisements, and detailed ones, which are in course of preparation, will be ready shortly; and, in the interim, address the Auctioneer, at his Offices 8, Essex-street, King-street, Manchester.

Contractors' Plant, Machinery, Four Portable Steam-Engines, and Effects

MR. GAIRDNER is instructed by Messrs. Brassey, Ogilvie, & Harrison, having nearly completed the works of the Northern Mid Lever Sewer, to SELL by AUCTION, on the PREMISES, in Bishopsgate-street (adjoining the Great Eastern Railway), on MONDAY, the 26th SEPTEMBER, at TWELVE, FOUR portable 10-horse power STEAM ENGINES, tunnel pumps, mortar mill, Woodford's patent riveted skips, ten portable offices, engineer's observatories, and store-houses, fourteen brick and rubbish carts, timber in balk and plank, ladders, stacks of fire-wood, scrap and old iron, gas-pipes, sinks, drain-pipes, York paving, and numerous effects.—On view two days prior. Catalogues forwarded per post, and at Mr. GAIRDNER'S Offices, 159, Tottenham court-road, W.

H. FREEMAN & CO Brokers, 3, Crooked-lane, Cannon street, E.C.

BUSHY PARK ESTATE, Upper Teddington, abutting on the Royal Park.—About ten acres of most valuable Freehold Building Land in this favoured locality

MESSRS. GADSDEN & ELLIS will SELL by AUCTION, at the GUILDHALL COFFEE HOUSE, near the Guildhall, Gresham-street, on THURSDAY, OCTOBER 13, at TWELVE for ONE (unless an acceptable offer be previously made by private contract) in one lot; but if not sold it will immediately be offered in several lots, as shown on particulars, a CAPITAL TEN ACRES of FREEHOLD LAND, handsomely timbered, adjoining and overlooking Bushy Park, on the road from Teddington to Hampton. Immediately opposite are several fine mansions of the first class, containing highly ornamental architectural features, enclosed and finished regardless of expense to ensure the superior character of the neighbourhood. A new church also is in course of erection adjoining the estate. Spring water is readily obtained, and gas and water are laid to the property. The site is most convenient to City or West end, by the Hampton Railway.—Particulars may be had of CHARLES LAWS, Esq. Architect, 11, Bucklersbury, E.C. and Park road, Teddington; of Messrs. PALMER, PALMER, & BULL, Solicitors, 14, Bedford-row; at the Guildhall Coffee-house, Gresham-street; and of Messrs. GADSDEN & ELLIS, 18, Old Broad-street, E.C.

KEMPTON PARK ESTATE, Hampton, on the high road to Sunbury, and adjoining to the River. Twenty-four Acres of Freehold Building Land, unsurpassed there is the finest brick earth in the district, and has good main drainage.

MESSRS. GADSDEN & ELLIS are instructed to SELL by AUCTION, at the GUILDHALL COFFEEHOUSE, near the Guildhall, Gresham street, on THURSDAY, OCTOBER 13, at TWELVE for ONE, in 1, 2, or more lots, TWENTY FOUR ACRES of FREEHOLD LAND with road formed, and ready for immediate building operations, and unsurpassed in the upper and lower road from Hampton to Sunbury, and within the district walk of the station on the Thames Valley Railway, which will be open almost immediately. The land has been let to several eminent residences and gardens, and commands fine views over the Thames and surrounding scenery, and is well deserving the attention of capitalists and builders.—Particulars may shortly be obtained of CHARLES LAWS, Esq. Architect, 11, Bucklersbury, E.C. and Park road, Teddington; of Messrs. PATERSON & LONGMAN, Solicitors, No. 3, Winchester-buildings, Winchester-street, E.C.; at the Guildhall Coffeehouse, Gresham-street; and of Messrs. GADSDEN & ELLIS, 18, Old Broad-street, E.C.

TWICKENHAM PARK, near RICHMOND.—Most Eligible BUILDING LAND TO BE LET on Lease, for Ninety nine Years, in Large or Small Plots. Money advanced, if required. For particulars, apply to W. BACKHURST, at the Estate Office, Twickenham; or to EDWARD GUILLAUME, Esq. 14, George-street, Mansion House, London.

SURBITON.—TO BUILDERS and OTHERS.—LAND TO BE LET, on building leases, five minutes' walk of the station, and 20 minutes from the City, at a rent less than 50s. a year rent. A portion of the money will be advanced if required. Apply to MR. MUDIE, Victoria-road, Surbiton.

LAND TO BE LET, by Tender, on the 29th SEPTEMBER, by the Fishmongers' Company, on a BUILDING LEASE, for ninety years, site the on the east side of Pudding-lane, in the centre of the fruit market, containing a frontage of 36 feet 6 inches to the said lane, and a depth of about 76 feet, fit for suitable fruit warehouses, shops or other business premises. Apply to Mr. W. B TOWSE, Fishmongers' Hall, London Bridge; or to Mr. RICHARD SUTTON, Architect and Surveyor, No. 25, Gracechurch-street, where plans and particulars may be seen. Tenders to be delivered before TWELVE o'clock on the 30th SEPTEMBER, 1864.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 50 feet in length; eleven best bedrooms; stabling for eight horses and coach-houses for four carriages; suitable servants' offices; extensive ornamental grounds, with greenhouses, in all 28 acres; gravelly soil; near Sunninghill Station, South Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. BOWEN MAY, Esq. Solicitor, 67, Russell square.

FREEHOLD LAND TO BE LET, on Building Leases, at low ground-rents, on the estate of the Carpenters' Company, at Stratford, Essex, close to the Station and the High-street; one portion with river frontage, for the erection of manufactories, and another for small houses or cottages.—For plans and particulars, apply at the Clerk's Office, Carpenters' Hall, London-wall.

TO LET, the GALLERY of the SOCIETY of BRITISH ARTISTS, consisting of five large Rooms, until the end of February.—Inquire on the Premises.
THOS. ROBERTS, Secretary.

BUILDING LAND TO BE LET, situate at Vauxhall, Lewisham, and Camberwell.—For particulars apply to Messrs. DRIVER & CO. 4, Whitehall, London, S.W.

RAMSGATE.—To BUILDERS, CAPITALISTS, and OTHERS.—TO BE SOLD or LET, several valuable Plots of FREEHOLD LAND, situate on the East Cliff, and adjoining the site of the proposed new Hotel.—Apply to WALLER & SON, 4, Lyall-street, Belgrave square, London; or of Messrs. FRIEND & VINTEN, House-agents, Ramsgate.

WIMBLEDON.—Valuable FREEHOLD BUILDING LAND, in a beautiful and notably healthy situation about a mile from the Putney Station, and only a pleasant drive from Richmond Park and the West End of London, TO BE SOLD as a whole or in plots, offering a selection of choice sites to any gentleman desirous of building for his own occupation; whilst as a building speculation it presents unusual advantages from the constant and increasing demand for houses in the neighbourhood, which is one of the most favourite within so short, convenient, and accessible a distance of town. The land affords ample space for the erection of about thirteen detached residences, or a greater number of semi detached villas, and the chief part is land tax redeemed.—Messrs. DEBENHAM & TEWSON, 80, Cheapside.

WHARF PREMISES TO BE LET, on the Regent's Canal (N.W.), close to the London and North Western Goods Depôt, well situated for a Slate Depôt, &c. A long lease would be granted to a suitable tenant.—Address, D. F. Office of "The Builder."

WATERSIDE MANUFACTURING PREMISES, at the West end.—TO BE SOLD, the LEASE of a WHARF and PREMISES, held for an unexpired term of about seventeen years, at a low ground rent. The above premises have been fitted within the last two years with all new machinery, which, together with the rolling stock, must be taken at a valuation. The proprietor withdraws solely in consequence of his having entered into contracts abroad, which will require all his attention. Part of the purchase money may remain on mortgage.—Address, A. Messrs. Simpson & Cullingford, Solicitors, 81, Gracechurch-street.

TO ENGINEERS or ARCHITECTS.—TO BE LET, a FIRST-FLOOR, well adapted for a Gentleman's Private Office or Residence. Rent moderate.—Apply at N. BAILEY'S, Tailor, 13, Cannon-row, Westminster.

FREEHOLD LAND TO BE SOLD, or TO LET on Building Leases, in Old-gravel-road, Old Kent road. And also near Forest Hill Station. Also, FREEHOLD WHARF, on the Surrey Canal, near Old Kent road.—Apply to Mr. MAY, Acorn Timber Wharf, Old Kent-road.

TO BRICK and TILE MAKERS and OTHERS.—TO BE LET, for a term, BRICK KILN, FOREMAN'S COTTAGE, and LAND, containing stock earth, at Sunninghill, Berks. There is a great demand for bricks, in consequence of the formation of the Railway from Sunningdale to Cambridge Town, and also to carry on building operations in the neighbourhood, therefore the Owners of a large Estate at Sunninghill are prepared to Let part of their Land, with Kiln, and Foreman's Cottage, for Brick and Tile making. The use of a private siding on the Staines and Wokingham Railway, very near the ground, and other advantages, will be accorded to any one taking the Land.—For particulars, apply to Messrs. DRIVER & CO. Surveyors, Land-agents, and Auctioneers, 4, Whitehall, London, S.W.

FREEHOLD LAND, near the City, a corner piece, containing over a quarter of an acre, five minutes' walk from Old Broad street, TO BE LET, on a Building Lease. It is suitable for a lasting frontages on wide streets, and is adjacent to one of the main arteries of London; and its situation and shape render it extremely eligible for a manufactory or warehouse.—For particulars, apply to Mr. WILLIAM EVE, Surveyor, 3, Union court, Old Board street, E.C.

TO BUILDERS.—PLOTS of LAND adjoining the most beautiful part of the River Thames and within 400 yards of the Taplow Station, thirty five minutes from London, TO BE LET on Building Leases, at low ground rent. Villas of 1,000 a year or more. In great demand. Advances of 70 per cent. to responsible builders.—Apply to R. A. WARD, solicitor, Maidenhead.

GOLDEN SQUARE, Regent-street.—TO BE LET, on Lease, from Midsummer, 1865, together or separately, those very Eligible PREMISES, Nos. 3 and 4, Upper James-street, Golden-square. A plan of the property, and other particulars, may be seen on application to the Vestry Clerk; and a Committee of Estates of the Parish of St Sepulchre, London, will meet in the Vestry-room of the Church, on FRIDAY, OCTOBER 21, 1864, at TWELVE o'clock at Noon precisely, to receive TENDERS. The Committee do not bind themselves to accept the highest or any Tender.
STEP. JNO. JONES, Vestry Clerk.
No. 1, Church-porch, Skinner-street, Snowhill.

GOLDEN SQUARE, Regent-street.—CROWN TAVERN.—TO BE LET, on LEASE, for twenty-one years, from Midsummer, 1865, the very eligible PREMISES, known as the Crown Tavern, close to the corner of Silver-street, Upper James-street, Golden-square, in the midst of a thickly-populated district. A plan of the property, and other particulars, may be seen on application to the Vestry Clerk; and a Committee of Estates of the Parish of St. Sepulchre, London, will meet in the Vestry-room of the Church, on FRIDAY, OCTOBER 21, 1864, at TWELVE o'clock at Noon precisely, to receive TENDERS. The Committee do not bind themselves to accept the highest or any Tender.
STEP. JNO. JONES, Vestry Clerk.
1, Church-porch, Skinner-street, Snowhill.

GOLDEN SQUARE, Regent-street.—TO BE LET on Lease, for twenty-one years from Midsummer, 1865, those very eligible and extensive PREMISES (now and for many years past in the occupation of Messrs. Bridwood & Sons, Pianoforte Makers), situate at 1, Rupert-court, on the eastern frontage in Bridle-lane, near to Golden square. A plan of the property and other particulars may be seen on application to the Vestry Clerk; and a Committee of the Estates of the Parish of Saint Sepulchre, London, will meet in the Vestry-room of the Church, on FRIDAY, the 21st OCTOBER, 1864, at TWELVE o'clock at Noon precisely, to receive TENDERS. The Committee do not bind themselves to accept the highest or any Tender.
STEP. JNO JONES, Vestry Clerk.
1, Church-porch, Skinner-street, Snow-hill.

TO BUILDERS.—A SMALL CITY BUSINESS, with excellent connexion, TO BE DISPOSED OF, together with the PLANT and STOCK. The ill health of the proprietor is the sole reason for relinquishing it. Address, A. B. C. at C. H. May's Advertising Offices, 5, St. Benet place, Gracechurch-street, E.C.

TO BUILDERS.—TO BE DISPOSED OF, on account of the death of the Proprietor, an excellent old-established BUILDER'S BUSINESS, for many years successfully carried on by the late Mr. ROBERT CRISP, at KINGSTON. For particulars apply to Mr. S. FLETCHER, Auctioneer, Kingston, Surrey.

A TRUSTEE for some ladies wishes to INVEST a few thousand pounds in small HOUSES, to pay a good per centage. As the money can be had at once, fix particulars and lowest price must be sent to Mr. COUSENS, 63, Charlotte-street, Caledonian-road.

London:—Printed by CHARLES WYMAN, Printer, at the Printing-office of COX & WYMAN, Nos. 74 and 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," No. 1, York street, in the Parish of St. Paul, Covent garden, both in the County of Middlesex.—Saturday, September 17, 1864.

BY ORDER of the SECRETARY of STATE for INDIA.

DESIGN FOR COMPETITION.—PRESIDENCY COLLEGE AND SENATE HOUSE.

The Madras Government are prepared to receive DESIGNS for a new PRESIDENCY COLLEGE, and for a SENATE HOUSE, to be built at Chepauk, Madras

A schedule of measurements, together with a plan of the proposed site, can be had on application to the UNDER SECRETARY of STATE for INDIA, India Office, Westminster.

The rates on which the work is to be calculated will also be furnished at that Office. The gross estimate is not to exceed Rupees 2,50,000 for the College, and Rupees 1,50,000 for the Senate House

The buildings will be erected on contiguous sites, and both should therefore be planned in the same style of architecture

There must be ample provision for proper ventilation, and the walls must be protected, as far as possible, from the direct rays of the sun.

The designs are unrestricted, firstly, as to the style, provided it is suited to the climate, and to the use to which the buildings are to be devoted; and secondly, as to materials, provided they are procurable in Madras, at prices which will admit of their being used in the buildings as designed

The designs must include,—

1st.—Ground-plan, and plan of each story.

2nd.—Elevation of each of the four faces, if not alike.

3rd.—Transverse sections.

The plans and elevations to be on a scale of 8 feet to an inch. A specification, in sufficient detail, to accompany each plan, to enable the Judges to decide whether the plans can be carried out within the sum allowed.

A prize of Rupees 3,000 will be awarded for the best design, provided it fairly fulfils the above conditions.

If the best designs, in an artistic point of view, fail to fulfil any of the above essential conditions, the Judges will be empowered to reduce or withhold the prize; and no prize will be awarded to a design merely because it fulfils the conditions, if otherwise conspicuously deficient in artistic merit.

The drawings and estimates, &c. should be sent in on or before the 1st of JANUARY, 1865, in the usual manner with motto on envelope, containing the name and address of the artist to the Secretary to Government, Public Works Department, Madras, by whom the envelopes will be opened after the prizes have been adjudged

It would be well and to Government to avail themselves of the services of the author in altering or executing the design selected, and that design will remain the absolute property of Government.

The design will be selected and the prize awarded by a Committee consisting of,

The Secretary to Government, Public Works Department.

The Director of Public Instruction.

The Chief Engineer, Madras Railway Company,

who will be asked to aid Government in the adjudication.

Unsuccessful designs will be returned to the authors if claimed by them, or by their authorized agents, within one month from the period of adjudication.

April 21, 1864. (Signed) CHARLES A. ORR, Colonel, R.E.
Secretary to Government.

India Office, September 21, 1864.

BY Order of the Secretary of State for India

in Council.—NOTICE is hereby given, that TWENTY-FIVE APPOINTMENTS in the Upper Class of the ELECTRIC TELEGRAPH DEPARTMENT in INDIA will, in the year 1865, be open to PUBLIC COMPETITION

A COMPETITIVE EXAMINATION will, accordingly, be held in this Office in the month of MAY next.—Full printed particulars of the conditions on which candidates will be admitted to the examination, and also respecting the nature of the appointments to be competed for, may be obtained at this Office, on application, either personally or by letter, addressed to the "Under Secretary of State for India," India Office, London, S.W.

India Office, 1st July, 1864.

PROVIDENT INSTITUTION of BUILDERS' FOREMEN and CLERKS of WORKS, 9, Conduit-street, Regent street, W.—H. LEE, Esq. Governor.

THE ANNIVERSARY DINNER of the Members and friends of the above Institution will take place at the London Tavern, Bishopsgate-street, on TUESDAY, SEPTEMBER 27th, 1864 JOSEPH TAYLOR, Esq. in the chair. Dinner on the table at SIX o'clock precisely. Tickets Half-a Guinea, exclusively of wine.

JOSEPH KAY, Secretary.

THE NATIONAL ART TRAINING SCHOOLS at SOUTH KENSINGTON, for Male and Female Students, will RE-OPEN on MONDAY, the 3rd day of OCTOBER. For information respecting fees, &c. apply to the Schools, or to the Secretary, Science and Art Department, South Kensington, W.

By order of the Lords of the Committee of Council on Education.

LAMBETH SCHOOL of ART.—This School will RE-OPEN on MONDAY, the 3rd of OCTOBER, and the Distribution of Medals, Prizes, &c. will take place on THURSDAY, the 27th.

WEST LONDON SCHOOL of ART, 204, Great Portland-street, W.

President—A. J. B. BERESFORD HOPE, Esq. M.A. D.C.L. &c. &c.
Treasurer—PETER GRAHAM, Esq.

The School RE-OPENS for the Winter Session on OCTOBER 3; after which date admission cannot be guaranteed to new students.

THE ARCHITECTURAL MUSEUM, SOUTH KENSINGTON MUSEUM, W.

The following PRIZES to ART-WORKMEN are now offered:—

For Wood-carving, 2*l.* and 1*l.*

For Silver Work, 10*l.* and 5*l.* 5*s.* (the latter given by Mr H. Heather Bigg, of Wimpole-street).

For Transparent Enamels, 10*l.* (given by the Ecclesiological Society and Mr. Beresford Hope).

For Opaque Enamels, 10*l.* (given by Mr. Ruskin).

Smaller Prizes will be added at the discretion of the Council.

Full particulars may be had either by a letter to the Honorary Secretary, at 13, Stratford-place, London, W. inclosing a directed and stamped envelope; or of the Attendant at the entrance to the South Kensington Museum; or at the Office of "The Builder," York-street, Covent-garden.

A. J. B. BERESFORD HOPE, President.
GEO. GILBERT SCOTT, Treasurer.
JOSEPH CLARKE, Honorary Secretary.

SCOTTISH NATIONAL MEMORIAL to H.R.H. THE PRINCE CONSORT.—The Committee of Advice nominated by her Majesty are now prepared to receive DESIGNS to be submitted to her Majesty for the SCOTTISH NATIONAL MEMORIAL to the PRINCE CONSORT about to be erected in Edinburgh or its immediate neighbourhood. Of the Sites which have been suggested for the Memorial, the most eligible appear to be—

1. A knoll on the Spur or Ridge running NNE. from Arthur's Seat, and about 240 feet above the sea.
2. West Princes-street Gardens, at the foot of Frederick street or Castle street
3. East side of Charlotte-square Garden, facing George street
4. The Queen's Park, in the immediate neighbourhood of Holyrood Palace.

The Committee, however, desire especially to direct the attention of artists to the first named of these sites, which offers many advantages A national memorial in that commanding position would be seen by persons approaching Edinburgh at a greater distance, and from a wider circle both of the city and the country, than in any other available situation At the same time, it is not desired absolutely to preclude the suggestion of any other site which an artist may consider specially suitable for his design. The amount of funds at the disposal of the Committee for the erection of the memorial is 12,000*l.*; and the Committee regret that they are therefore unable to offer premiums or to remunerate any unsuccessful competitor for his design. It is requested that all models and drawings, not already prepared, may be furnished on a scale of one inch to the foot. No Design can be received after the TENTH day of DECEMBER.

125, George street, Edinburgh, W. S. WALKER, Hon. Sec.
5th September, 1864.

QUEEN'S COLLEGE, LIVERPOOL.—A CLASS for the STUDY of ENGINEERING and APPLIED MECHANICS will be OPENED on MONDAY, 3rd OCTOBER. The subjects taught in the College are Mathematics, Natural Philosophy, Chemistry, Geology, Drawing, Greek, Latin, French, German, English Language and Literature, History, Logic, Arabic, Hebrew, Sanskrit, Physiology, and Political Economy.—For prospectuses, apply to ASHUR CARUS, Secretary, The College, Mount-street, Liverpool.

BILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow an Interest in the same, and have considerably reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new Buildings.—For prices, apply to the Manager, Mr. TYLER, 12, Abingdon-street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of smoky Chimneys.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72—74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Cooking Utensils, &c to meet the great public demand; and also for the consequent more extensive execution of all descriptions of hot water, bath, laundry, and steam work.

72—74, Bishopsgate street Within.

BUILDERS or CONTRACTORS requiring "SURETIES" for the execution of Works of any magnitude, are requested to communicate with Messrs. TREGO, Architects, 12, Abingdon-street, Westminster.

COMPETITIONS.

TO ARCHITECTS.—The Town Council of the City and Borough of Bath invite DESIGNS for the proposed NEW BUILDINGS, upon the site of the late White Hart Hotel, Bath, which are intended to comprise suites of rooms for families, together with hot and cold baths, mineral water, and Turkish baths in connexion with the present bathing establishment. The cost of the buildings not to exceed 15,000*l.* A premium of 250*l.* will be paid to the author of the design, to which the Town Council shall award the first place, and a premium of 100*l.* to the author of the design which they shall consider second in merit, and in the event of either of these designs being carried out, the premium of the architect competing, if he be employed, will be deducted from the usual commission. The designs are to be delivered free of cost, at the Guildhall, Bath, properly endorsed, on or before NOVEMBER 29th, and the two designs to which premiums shall be awarded will become the absolute property of the Town Council, without any condition whatever. All designs to have the name of the author or authors attached, and to be coloured in monotone; the plans and elevations to be drawn to a scale of 1/8th of an inch to a foot. A copy of the conditions to be observed by architects, with a plan of the site, and other particulars, may be obtained of the undersigned, on the payment of 10*s.* 6*d.* which will be returned to those forwarding designs.

By order,
JOHN STONE, Town Clerk.

Guildhall, Bath, September 8, 1864.

TO ARCHITECTS and OTHERS.—DESIGNS for the METROPOLITAN MEAT and POULTRY MARKET, SMITHFIELD.—Notice is hereby given, that the Markets Improvements are prepared to receive DESIGNS for a MEAT and POULTRY MARKET, to be erected at Smithfield The block plan, with all conditions and information as to the several requirements may be obtained at the Architect's Office, Guildhall, upon payment of 5*s.* Premiums of 300*l.* and 200*l.* respectively will be given for the two most approved Designs, such designs to become the property of the Corporation. The Corporation do not engage to carry out either of the Designs which may receive the premiums, or to employ in the execution of the works either of the persons to whom the premiums may be awarded The several Designs, with all accompanying documents, must be delivered at the Town Clerk's Office by TWELVE o'clock on THURSDAY, the 1st of DECEMBER next, sealed up and endorsed "Metropolitan Meat and Poultry Market."

Guildhall, 22nd September, 1864. WOODTHORPE.

DESIGNS for FULFORD CHURCH.—FURTHER EXTENSION of TIME.—A PREMIUM of Fifteen Guineas is offered for the best SET of DESIGNS for the New Church at Fulford. Selections to be made by the Committee, and the design selected to become the property of the Committee. Extreme estimate 3,000*l.*; to seat not less than 450. Site, 60 yards square; Frontage, West—the York-road. Tower or Spire. Outside Wall, Hammered Stone The designs must be sent in, free of expense, to the Postmaster, Fulford, on or before THURSDAY, the 20th OCTOBER.

TO ARCHITECTS, &c.—COMPETITION PLANS for NEW MARKET-HOUSE and PUBLIC HALL for the town of Farnham, Surrey.—The Directors of the Farnham Market-house and Town hall Company (Limited) invite Architects to furnish PLANS, with SECTIONS, for the above proposed building, the cost of which is not to exceed 3,500*l.* A premium of 5*l.* will be given for the plan selected as the best, and a premium of 20*l.* for the second best. The plans of the two successful competitors to be the property of the Company, and no payment will be made for unsuccessful designs. Should the author of the best design be appointed Architect to the building, the premium awarded will be included in the commission that may be agreed to be paid to him.—Full particulars may be obtained of Mr. HENRY POTTER, Parish Secretary to the Company The designs must be sent in under seal, without signatures, with a private mark or motto, and a letter accompanying them, also under seal, containing the corresponding mark or motto, and the designer's name and address. They must be addressed to the Chairman of the above Company, 5, Castle-street, Farnham, and delivered before the 4th day of NOVEMBER next.

Farnham, 31st of August, 1864

TO ENGINEERS and OTHERS.—The Corporation of Okehampton contemplate BRINGING WATER into the town for the use of the inhabitants of the borough, and are desirous of receiving Plans, specifications, and Estimates for the WORKS proposed; patterns of which may be obtained at my Office. The Corporation will pay to the person whose plan shall be approved and adopted the sum of 20*l.*; but in case such person shall afterwards become the Contractor for effecting the work, that sum will be deducted from the amount of such Contract. The plans, &c. to be delivered to me within a month from this date.

JOHN MARSH BURD, Town Clerk.

Okehampton, Sept. 12th, 1864.

CONTRACTS.

WEAR NAVIGATION and SUNDERLAND DOCKS.—TO CONTRACTORS.—The River Wear Commissioners are prepared to receive TENDERS for the ERECTION of a NEW GRANARY at the South Docks, Sunderland. The drawings and specification may be seen on application at the THOMAS MEIK, Esq. C.E. Engineer's Office, Harbour and Dock Works, Sunderland, on and after the 19th SEPTEMBER, 1864. Tenders, on printed forms, which may be obtained at the Engineer's Office, and which only will be received, to be delivered under cover, addressed to the "Chairman of the Executive Committee, River Wear Commissioners," at 19, Fawcett street, Sunderland, not later than NOON on TUESDAY, 4th of OCTOBER, 1864. The Commissioners do not bind themselves to accept the lowest or any Tender.—By order,

J. A. ROBINSON, Clerk to the Commissioners.

19, Fawcett-street, Sunderland, September 7th, 1864.

BLACKFRIARS BRIDGE.—TENDERS will be received for the OLD STONE of this Bridge, consisting of Portland, granite in blocks and dressed, Bath, Portland, and rough rubble Also for the handsome columns, with moulded bases and carved caps.—Apply to Messrs. THORN & CO. Contractors, on the Bridge.

[For remainder of Contracts see next Page.

WAR DEPARTMENT CONTRACTS.—
NOTICE to BUILDERS.
TENDERS are required for the SUPPLY of MATERIALS and LABOUR for War Depositn at WORKS, at Aldershott Camp and Pennhurst, at Byfleet, on the Line of Hants, in lieu of Repairs to the existing buildings, under a Triennial Contract, from the 1st January, 1865, to the 31st March, 1868, determinable at any period after One Year, on either party giving to the other three months' notice in writing.
Copies of the schedules, for which the sum of six shillings and nine pence for each copy must be paid in cash, together with forms of Tender may be obtained on application at this Office.
Although the said schedules include prices for work done, and for day labour, the Contractor will, as a general rule, be called upon only to supply materials.
The Tenders to be addressed, under cover, to the Director of Contract Works, Pall Mall, London, S.W. endorsed, in the left hand corner, "Tender for Works at Aldershott," on or before SATURDAY the 5th NOVEMBER, 1864.
The Secretary of State for War does not bind himself to accept the lowest or any of the Tenders
Royal Engineer Office, Aldershott,
10th September, 1864

COAST GUARD CONTRACT.—
NOTICE to BUILDERS and CONTRACTORS.
